1. The Protein and nucleic acid ratio in TMV (Tobacco Mosaic Virus) is :
(A) 64.4:35.6
(B) $74.4: 25.6$
(C) 84.4:15.6
(D) 94.4:5.6
2. Which of the following is an aseptic, siphoceous and coenocytic alga:
(A) Chlorella
(B) Chara
(C) Vaucheria
(D) Volvox
3. The Gonimoblast initials are found in :
A) Batrachospermum
(B) Ectocarpus
(C) Chara
(D) Oedogonium
4. Match the related features of following columns and choose the correct pairing given below:
Column A

## Column B

1. Morchella
A. Late blight of potato
B. Leaf spot of crucifers
C. Guchhi
2. Rhizopus stolonifer
D. Soff rot of sweet potato
3. Alternaria brassicae
E. Stem rust of wheat
4. Puccinia graminis tritici
(A) 1-A; 2-B; 3-C; 4-D; 5-E
(B) 1-E; 2-A;3-D; 4-B; 5-C
(C) 1-C; 2-B; 3-D; 4-B; 5-E
(D) 1-B; 2-C; 3-A; 4-E; 5-D
5. A protostele wherein the central xylem core breaks into more or less parallel plates is knownas :
(A) Haplostele
(B) Actinostele
(C) Plectostele
(D) Mixed protestele
6. Nostoc lives in the thalli of Anthoceros possibly as :
(A) Nitrogen fixer
(B) Obligate parasite
(C) Hyper parasite
(D) Space parasite

CMN-45529-A
\{2\}
7. Which of the following bryophytic member is commonly knownas "Scouring rushes":
(A) Marchantia
(B) Lycopodium
(C) Equistem
(D) Polytrichum
8. In Polytrichum the central part of the capsule occupied by a thick sterile column of parenchymatous cells is labeled as:
(A) Columella
(B) Apophysis
(C) Epiphragm
(D) Annulus
9. In a primary cell wall the hemicelluloses content is upto:
(A) $25 \%$
(B) $50 \%$
(C) $75 \%$
(D) $60.4 \%$
10. The structure formed during meiotic division which facilitates the crossing over is called:
(A) Chromocentre
(B) Kinetochore
(C) Synzetic knot
(D) Synoptonemal complex
11. Photosystem II (PSII) occurs in membranes of only appressed parts of
(A) Stromathyllakoids
(B) Grana thyllakoids
(C) Both Stroma and Grana thyllakoids
(D) In partially-appressed parts of grana thyllakoids
12. The crossing-over within the pericentric inversion loop:
(A) Does not alter the morphology of affected chromosomes
(B) May alter the centromeric positions
(C) Dominantly alters the morphology of affected chromosomes
(D) Both (B) and (C)
13. In sweet pea genes "C" and "P" are necessary for colour of flowers. The flowers are white in the absence of either or both the genes, what will be the percentage of coloured flowers in the offspring of the cross between Ccpp X ccPp :
(A) $25 \%$
(B) $50 \%$
(C) $75 \%$
(D) $100 \%$

## CMN-45529-A

$\{3\}$
14. $9: 7$ ratio in the F 2 generation is produced due to the presence of:
(A) Pleiotropic genes
(B) Supplementary genes
(C) Complementary genes
(D) Recessive genes
15. The DNA segments which are formed from RNA under the influence of RNA dependent DNA polymerase enzyme are termed as :
(A) Transposons
(B) Retroposons
(C) Repressible genes
(D) Pseudogenes
16. Mini-satellite sequences are:
(A) 1-6 bp repeat units flanked by conserved sequences
(B) 1-6 bp flanked by conserved restrictions
(C) 11-30 bp repeat units flanked by conserved sequences
(D) 11-30 bp flanked by conserved restrictions sites
17. The prokaryotic mRNA is:
$\begin{array}{ll}\text { (A) Short living and polycistronic } & \text { (B) Short living and monocistronic }\end{array}$
(C) Long living and polycistronic
(D) Long living and monocistronic
18. Which of the following is the first base of all nonsense codons:
(A) Adenine
(B) Cytosine
(C) Guanine
(D) Uracil
19. An amino acid coded by more than one codon reflects the property of genetic code termed as:
(A) Universal
(B) Non-overlapping
(C) Degenerative
(D) Colinearity
20. Agrobacterium mediated gene transfer is mostly successful in :
(A) Dicots
(B) Monocots
(C) Both (A) and (B)
(D) Neither (A) and (B)
21. The specimen collected from the same locality from which the holotype was originally collected is termed as :
(A) Epitype
(B) Lectotype
(C) Topotype
(D) Syntype
22. The classification based on evolutionary as well as genetic relationships is designated as:
(A) Artificial system of classification
(B). Natural system of classification
(C) Evolutionary system of classification
(D) Cladistics
23. The term "New systematics" was proposed by:
(A) John Ray, 1705
(B) Julian Huxley, 1940
(C) Hutchinson, 1908
(D) Bentham and Hooker, 1758
24. Ordinas Anomali of Bentham and Hooker includes :
(A) A few orders which could not be placed satisfactorily in the classification
(B) Plants described only in fossil record
(C) Plants described only in literature
(D) Seed plants showing abnormal growth and development
25. The Gymnospermous type of wood is present in some members of which of the following angiospermous family:
(A) Ranunculaceae
(B) Rosaceae
(C) Magnoliaceae
(D) Malvaceae
26. Alphataxonomy usually refers to
(A) Exploratory phase
(B) Consolidation phase
(C) Both (A) and (B)
(D) Biosystematic phase
27. When a fossilized material is extracted in the form of nummified specimen it is known as:
(A) Ambers
(B) Incrustations
(C) Compactions
(D) Pterifications
28. Which amongst the following possess vessels in its secondary wood:
(A) Cycas
(B) Pinus
(C) Ephedra
(D) Cedrus
29. Queiscent centre is a reservoir of cells showing
(A) Nomeristematic activity
(B) Occasional meristematic activity
(C) High meristematic activity
(D) Highly dormant phases
30. Tunica-corpus concept was first proposed by :
(A) Hanstein, 1868
(B) Dermen, 1947
(C) Schmidt, 1924
(D) Popham, 1952
31. Cambium, a tissue structurally and functionally depicts :
(A) Secondary origin and primary function
(B) Primary origin and primary function
(C) Primary origin and secondary function
(D) Secondary origin and secondary function
32. The multiple root cap is present in:
(A) Cephalis
(B) Pandanus
(C) Orchis
(D) Tinospora
33. Multiciliate top shaped antherozoid is found in:
(A) Cycas
(B) Pinus
(C) Ephedra
(D) Cedrus
34. The bract scale of Pimus facilitates :
(A) Seed dispersal
(B) Seed development
(C) Fertilization
(D) Both (A) and (B)
35. Which of the following statements is true about "heart wood":
(A) It is the outer light coloured zone of secondary $x y l e m$
(B) It is the inner dark coloured zone of secondary xylem
(C) It is also known as "alburnum"
(D) None of these
36. The secondary growth as a rare feature of monocots is depicted by:
(A) Dracaena and Asparagus
(B) Asparagus and Yucca
(C) Dracaena and Lilium
(D) Dracaena and Yucca
37. Ubisch granules are connected with the development of:
(A) Endosperm
(B) Embryosac
(C) Pollen grains
(D) Embryo
38. When a pollen grain of tetraploid plant brings about the fertilization in diploid plant the endospermof the seed will be with
(A) 4 n
(B) 3 n
(C) 2 n
(D) 5 n
39. The fleshy and colourful seed appendage which arises from the funiculus or testa is called:
(A) Operculum
(B) Aril
(C) Caruncle
(D) None of these
40. The natural barrier existing between androecium and gynoecium which favours allogamy is known as :
(A) Cleistogamy
(B) Homogamy
(C) Herkogamy
(D) Pterkogamy
41. In a completely plasmolysed cell, the TP is zero and osmotic potential is high, hence the DPD of the cell will be :
(A) $\mathrm{DPD}=\mathrm{OP}-\infty$
(B) $\mathrm{DPD}=\mathrm{OP}$
(C) $\mathrm{DPD}=\mathrm{OP}-\mathrm{DPG}$
(D) $\mathrm{DPD}=\mathrm{OP}-2$
42. Characteristic interveinal chloretic spots develop and the principal vein remains typically green showing fine network of reticulate venation depicting the symptom of :
(A) $\mathrm{Fe}^{++}$or $\mathrm{Fe}^{+++}$
(B) $\mathrm{BO}_{3}{ }^{3-}$ or K+
(C) $\mathrm{Zn}^{++}$or $\mathrm{MoO}_{4}^{--}$
(D) $\mathrm{Fe}^{++}$or $\mathrm{Zn}^{++}$
43. Match the theories in column I with the names of the Scientists listed in Column II depicting correct combinations:

| Column I | Column II |
| :---: | :---: |
| 1. Relay pump theory | A. Stocking |
| 2. Transpiration chesion theory | B. Sir J. C. Bose |
| 3. Mass flow | C. Godlewski |
| 4. Pulsation theory | D. Dixon and Jolly |
|  | E. Emst Munch |
| (A) $1=\mathrm{C} ; 2=\mathrm{D} ; 3=\mathrm{E} ; 4=\mathrm{B}$ | (B) $1=\mathrm{D} ; 2=\mathrm{C} ; 3=\mathrm{A} ; 4=\mathrm{B}$ |
| (C) $1=\mathrm{C} ; 2=\mathrm{B} ; 3=\mathrm{E} ; 4=\mathrm{B}$ | (D) $1=\mathrm{B} ; 2=\mathrm{A} ; 3=\mathrm{E} ; 4=\mathrm{C}$ |

44. Phosphorous is absorbed by the plants in the form of:
(A) $\mathrm{H}_{2} \mathrm{PO}_{4}^{-}$and $\mathrm{H}_{2} \mathrm{PO}^{4}$
(B) $\mathrm{H} \mathrm{PO}_{4}^{-}$and $\mathrm{H} \mathrm{PO}_{4}$
(C) $\mathrm{H}_{2} \mathrm{PO}_{4}{ }^{3-}$ and $\mathrm{H}_{2} \mathrm{PO}_{4}{ }^{4-}$
(D) $\mathrm{H}_{2} \mathrm{PO}_{4}^{-}$and $\mathrm{H} \mathrm{PO}_{4}^{2-}$
45. Which of the following photosynthetic bacteria have both PS I and PS II:
(A) Cyanobacteria
(B) Green sulphur bacteria
(C) Purple sulphur bacteria
(D) Purple non-sulphur bacteria
46. The carotenoids absorb light wavelengths between :
(A) $650-740 \mathrm{~nm}$
(B) $550-650 \mathrm{~nm}$
(C) $400-500 \mathrm{~nm}$
(D) $300-390 \mathrm{~nm}$
47. When a molecule of pyruvic acid is subjected to anaerobic oxidation, there is
(A) Consumption of 2 molecules of ATP
(B) Consumption of 6 molecules of ATP
(C) Gain of 2 molecules of ATP
(D) Gain of 4 molecules of ATP
48. How many water molecules are produced in one Kreb's cycle throughelectron transpor chain?
(A) One
(B) Two
(C) Three
(D) Four
49. An efficient rooting inducing chemical commercially recommended inhorticulture is
(A) IBA
(B) NAA
(C) GAA
(D) $2,4-\mathrm{D}$
50. Ethylene, a gaseous hormone :
(A) Breaks bud and seed dormancy in some species
(B) Is a fruit ripening hormone
(C) Induces flowering in Mango and Pineapple
(D) All the above i.e. (A), (B) and (C)
51. Km (Michaelis Menten constant) generally lies between $10^{-1}$ to $10^{-6}$, a high Km o an enzyme depicts:
(A) High affinity for substrate
(B) Low affinity for substrate
(C) No affinity for the substrate
(D) None of the above
52. In temperate legumes a major part of fixed nitrogen is passed to the host as
(A) Glutamine
(B) Ureids
(C) $\infty$-Ketoglutarate
(D) None of the above
53. The soil horizon which contains mineral matter mixed with humus, rich in microorganisms and very high biological activity is:
(A) C-Horizon
(B) B-Horizon
(C) A-Horizon
(D) O-Horizon
54. Which of the following is also referred to as fecundity rate
(A) Realized Mortality
(B) Potential Mortality
(C) Realized Natality
(D) Potential Natality
55. In some adapted plants the seed germinates inside the fruit while it is still on the parent tree-a phenomenon known as :
(A) Lithophytes
(B) Halophytes
(C) Xerophytes
(D) Chersophytes
56. In a population where growth rate is nearly zero, the age pyramid will be:
(A) Bell shaped
(B) Um shaped
(C) Triangle shaped
(D) Ring shaped
57. Which of the following plant is ethno-medicinally used to cure acidity, diarrhea and hepatic disorders:
$\begin{array}{ll}\text { (A) Podophyllum hexandrum } & \text { (B) Atropa acuminata }\end{array}$
$\begin{array}{ll}\text { (C) Artemisia absinthium } & \text { (D) Atropa belladonna }\end{array}$
58. Which of the following ecosystems is least productive:
(A) Coral reefs
(B) Pond ecosystems
(C) Ocean ecosystem
(D) Desert ecosystems
59. Which of the following is the commercial source of ground nut edible oil :
(A) Cicer arietinum
(B) Cajanus cajan
(C) Arachis hypogea
(D) Butea frondosa
60. In the process of ecological succession living organisms and environment influence each other, consequently leading to another community, this is termed as :
(A) Ecosis
(B) Reaction
(C) Aggregation
(D) Nudation
61. Three series recognized by Bentham and Hooker under Gamopetalae are :
(A) Thalmiflorae, Disciflorac and Inferae
(B) Heteromerac, Calyciflorae and Bicarpellatae
(C) Inferac, Calyciflorae, Disciflorae
(D) Inferae, Heteromerac and Bicarpellatac
62. OTU stands for:
(A) Operational Taxonomic Unit
(B) Optional Taxonomic Unit
(C) Observed Taxonomic Unit
(D) Obvious Taxonomic Unit
63. Nothotaxa are:
(A) Rare taxa
(B) Fossil taxa
(C) Hybrid taxa
(D) Endemic taxa
64. The International Code of Botanical Nomenclature has:
(A) Three Principles
(B) Six Principles
(C) Nine Principles
(D) Twelve Principles
65. Hypanthium is a characteristic feature of:
( $\Lambda$ ) Ranunculaceac
(B) Brassicaceac
(C) Rosaceae
(D) Magnoliaceac
66. Arahidopsis thaliana, the extensively studied model plant in plant biology, belongs to :
( $($ ) Lamiaceac
(B) Brassicaceac
(C) Iridaceac
(D) Rosaceae
67. The two leads of a couplet in a dichotomous key should be :
(A) Mutually exclusive
(B) Mutually inclusive
(C) Overlapping
(D) None of the above
68. Which of the following is not a characteristic of Magnolia?
(A) Elongated floral axis bearing numerous spirally arranged stamens
(B) Fruit is an aggregate of follicles
(C) Monosulcate pollen grains
(D) Multicarpellary syncarpous gynoccium
69. Cells in the 'Qutiescent Centre' of the root apical meristem have :
(A) High mitotic activity
(B) Low mitotic activity
(C) Very high mitotic activity
(D) All of the above
70. Axylem fibre usually with thick walls and simple pits is a :
( $\wedge$ ) Libriform fibre
(B) Fibre tracheid
(C) Sclerotic fibre
(D) Bast fibre
71. Albuminous cells are associated with :
( $\Lambda$ ) Sieve-tube cells
(B) Sieve-tube members
(C) Sieve cells
(D) None of the above
72. A vascular bundle in which phloem occurs on either side of $x y l e m$ is known as:
( A$)$ Collateral vascular bundle
(B) Bicollateral vascular bundle
(C) Commissural vascular bundle
(D) Apotracheal vascular bundle
73. Male gametophytes (microspores) in Ephedra are dispersed at :
( $\Lambda$ ) 2-celled stage
(B) 3-celled stage
(C) 4-celled stage
(D) 5-celled stage
74. Each ovuliferous scalc in Pinus mostly bears:
(A) Oneorule
(B) Two ovules
(C) Three ovules
(D) Four ovules
75. Development of embryo in gymnosperms is generally:
(A) Meroblastic
(B) Holoblastic
(C) Discoblastic
(D) None of the above
76. $\Lambda$ cell in root epidermis that gives rise to a root hair is called as :
( $\wedge)$ Idioblast
(B) Trichoblast
(C). Sclercid
(D) $I$ aticifer
77. When pollen grains of a flower pollinate any other flower present on the same plant, it is called :
( $\wedge$ ) Herkogamy
(B) Dichogamy
(C) Porogamy
(I) Gcitonogamy
78. Endosperm in species with Oenothera type of embryo sac is:
(A) I lexaploid
(B) Tetraploid
(C) Diploid
(D) I laploid
79. Which of the following is a tetrasporic and 8-nucleate embryo sac?
(A) Polygonum type
(B) Fritillaria type
(C) Nllium type
(D) Pepromia type
80. The type of embryo development in which apical cell of the two-celled proembryo divides by a transverse wall and both basal and apical cells contribute to the embryo development is called as:
( 1 ) Asterad lype
(B) Onagrad type
(C) Crucifer type
(D) Chenopodiad type
81. When a turgid cell is placed in a sucrose solution that has water potential more negative than the water potential of the cell, water will move from :
(A) Turgid cell to the sucrose solution
(B) Sucrose solution to the turgid eell
(C) Either (A) or (B)
(D) Neither (A) nor (B)
82. Which of the following is called a second messenger for its role in various plant responses to environmental and hormonal signals?
(A) Sulphur
(B) Calcium
(C) Manganese
(D) Phosphorus
83. Carbohydrates translocated in the phloem are mostly:
(A) Reducing sugars
(B) Non-reducing sugars
(C) Both reducing and non-reducing sugars (D)
(D) Heteropolysaccharides
84. Water, due to extensive hydrogen bonding between its molecules, has :
(A) High specific heat and low latent heat of vaporization
(B) Low specific heat and high latent heat of vaporization
(C) High specific heat and high latent heat of vaporization
(D) Low specific heat and low latent heat of vaporization
85. Which of the following shuttles electrons between the cytochrome $b 6 /$ cytochrome $f$ complex and photosystem I (PSI) ?
(A) Plastocyanin
(B) Plastoquinone
(C) Both (A) and (B)
(D) $\quad \operatorname{Neither}(\mathrm{A}) \operatorname{nor}(\mathrm{B})$
86. The ion that plays a role in activation of Rubisco is :
(A) $\mathrm{Ca}^{2+}$
(B) Na
(C) $\mathrm{Mg}^{2}$
(D) $\mathrm{K}^{+}$
87. Which component of $F_{0} \mathrm{~F}_{1}-$ ATP synthase contains the catalytic site for conversion of ADP and $\mathrm{P}_{\mathrm{i}}$ into ATP ?
(A) $\mathrm{F}_{0}$ component
(B) $\mathrm{F}_{1}$ component
(C) Both $\mathrm{F}_{0}$ and $\mathrm{F}_{1}$ components have separate catalytic sites
(D) Neither $\mathrm{F}_{0}$ nor $\mathrm{F}_{1}$ component has catalytic site
88. The enzyme that participates in both the citric acid cycle (TCA cycle) and the electron transport chain in mitochondria is :
(A) Citrate synthase
(B) Isocitrate dehydrogenase
(C) Succinate dehydrogenase
(D) Malate dehydrogenase
89. The plant hormone that clearly shows polar transport is :
(A) Indole-3-acetic acid
(B) Ethylene
(C) Zeatin
(D) All of the above
90. Which of the following is a climacteric fruit?
(A) Cherry
(B) Citrus
(C) Grape
(D) Banana
91. Flowering in short-day plants is inhibited by:
(A) $P_{R}$ form of phytochrome
(B) $\mathrm{P}_{\mathrm{FR}}$ form of phytochrome
(C) Both (A) and (B)
(D) $\quad \operatorname{Neither}(\mathrm{A}) \operatorname{nor}(\mathrm{B})$
92. The diagnostic feature of a non-competitive type of enzyme inhibition where the inhibitor reduces the activity of the enzyme by binding not to the active site on the enryme but to a different site is that:
(A) $\mathrm{K}_{\mathrm{m}}$ is unaffected, whereas $\mathrm{V}_{\text {max }}$ decreases in presence of increasing amounts of inhibitor
(B) $\mathrm{K}_{\mathrm{m}}$ decreases in presence of increasing amounts of inhibitor, whereas $\mathrm{V}_{\text {max }}$ is unaffected
(C) Both $\mathrm{K}_{\mathrm{m}}$ and $\mathrm{V}_{\text {max }}$ are unaffected
(D) Both $\mathrm{K}_{\mathrm{m}}$ and $\mathrm{V}_{\text {max }}$ are decreased
93. Plants which are adapted to fire are called :
(A) Porophytes
(B) Pyrophytes
(C) Psychrophiles
(D) Glycophytes
94. Desiccation tolerant plants are known as :
(A) Poikilohydric
(B) Homoiohydric
(C) Poikilothermic
(D) None of the above
95. Which of the following letter combinations would be used to designate a transition horizon having distinct parts with properties of $E$ horizon and other parts having properties of $B$ horizon?
(A) $\dot{\mathrm{EB}}$
(B) BE
(C) $\mathrm{E} / \mathrm{B}$
(D) None of the above
96. A group of individuals of same age in a population constitute a :
(A) Cohort
(B) Scre
(C) Co-sere
(D) Cohred
97. Serotinal aspect of a community refers to :
(A) Appearance of a community during spring
(B) Appearance of a community during summer
(C) Appearance of a community during autumn
(D) Appearance of a community during winter
98. Which of the following brings about oxidation of nitrite to nitrate ?
(A) Nitrosomonas
(B) Nitrosococcus
(C) Nitrosospira
(D) Nitrobacter
99. Botanical name of bread wheat is:
(A) Triticum aestivum
(B) Triticum monococcum
(C) Triticum durum
(D) Triticum dicoccum
100. The correct combination among the following is :
(A) Corchorus capsularis---Tosa jute
(B) Corchorus olitorius---White jute
(C) Corchorus capsularis---White jute
(D) Corchorus olitorius---Black jute
101. Based on capsid architecture, Tobacco Mosaic Virus (TMV) is a :
(A) Helical virus
(B) Polyhedral virus
(C) Enveloped virus
(D) Complex viruses
102. Hormogonia are specialized reproductive structures in :
(A) Phytopthora
(B) Alternaria
(C) •Rhizopus
(D) Nostoc
103. Puccinia belongs to :
(A) Ascomycotina
(B) Deuteromycotina
(C) Basidiomycotina
(D) Zygomycotina
104. Nannandrous species of Oedogonium are :
(A) Monoecious
(B) Dioecious
(C) Either monoccious or dioccious
(D) Neither monoecious nor dioecious
105. Pseudoelators are found in the sporophyte of:
(A) Marchantia
(B) Riccia
(C) Polytrichum
(D) Anthoceros
106. Androcytes in Polytrichum mature into :
(A) Uniflagellate antherozoids
(B) Biflagellate antherozoids
(C) Quadriflagellate antherozoids
(D) Pentaflagellate antherozoids
107. A siphonostele with non-overlapping leaf gaps is known as ?
(A) Dictyostele
(B) Actinostele
(C) Plectostele
(D) Solenostele
108. Development of gametophyte directly from the vegetative cells of the sporophyte without the formation of spores is known as :
(A) Apospory
(B) Apogamy
(C) Heterospory
(D) Homospory
109. The correct sequence of various phases of cell cycle is:
(A) $G_{1}, G_{2}, S$ and $M$
(B) $\quad \mathrm{S}, \mathrm{G}_{1}, \mathrm{G}_{2}$ and M
(C) $\mathrm{G}_{1}, \mathrm{~S}, \mathrm{G}_{2}$ and M
(D) $\quad G_{1}, G_{2}, M$ and $S$
110. The most common hemicellulose in the primary cell wall of dicotyledons is :
(A) Xyloglucan
(B) Galactoglucomannan
(C) Glucuronoxylan
(D) None of the above
111. 18S rRNA in eukaryotes is a component of which subunit of ribosomes?
(A) 60S subunit
(B) 50 S subunit
(C) 40S subunit
(D) 30 S subunit
112. Which of the following is true about telomeres of chromosomes?
(A) Initiate RNA synthesis
(B) Seal ends of chromosomes
(C) Help chromatids to move towards poles
(D) Mark the location of nucleolar organizer region on the chromosome
113. Histones are rich in :
(A) Arginine and Proline
(B) Lysine and Trytophan
(C) Lysine and Arginine
(D) Proline and Tryptophan
114. Which of the following describes the ability of a single gene to have multiple phenotypic effects?
(A) Pleiotropy
(B) Epistasis
(C) Incomplete Dominance
(D) None of the above
115. The number of nitrogen atoms in guanine base of DNA is :
(A) 2
(B) 3
(C) 4
(D) 5
116. Processing of pre-mRNAs immediately after transcription in eukaryotes involves :
(A) Removal of introns
(B) Addition of cap to the 5 ' end
(C) Addition of polyadenylated (poly-A) tail to the $3^{\prime}$ end
(D) All of the above
117. Denaturation of DNA duplex results in :
(A) Propeller twist
(B) Hyperchromicity
(C) Hypochromicity
(D) Polychromicity
118. Two amino acids, each specified by a single codon, are :
(A) Methionine and Arginine
(B) Methionine and Leucine
(C) Tryptophan and Methionine
(D) Proline and Methionine
119. The DNA sequence of TATA box found in the promoter region of many eukaryotic genes is:
(A) $5^{\prime}-$ TATAAA- $3^{\prime}$
(B) $5^{\prime}$-TATAAT- $3^{\prime}$
(C) $5^{\prime}$-TAAATT $-3^{\prime}$
(D) $\quad 5^{\prime}-\mathrm{TTAAAT}-3^{\prime}$
120. R-plasmid when present in a bacteria confers :
(A) Resistance to high temperature
(B) Resistance to antibiotics
(C) Resistance to cold temperature
(D) All of the above
121. Multiplication of a T-even bacteriophage in its host (Escherichia coli) cells is an example of:
(a) Lysogenic cycle
(b) Lytic cycle
(c) Prophage cycle
(d) All of the above
122. Zoospores in Vaucheria are :
(a) Multinucleate and uniflagellate
(b) Multinucleate and uninucleate
(c) Multinucleate and multiflagellate
(d) Uninucleate and uniflagellate
123. Mature uredospres of Puccinia graminis are :
(a) Unicellular and binucleate
(b) Bicellular and binucleate
(c) Unicellular and Uninucleate
(d) Bicellular and Uninucleate
124. The filaments of 'Chantransia' in Bactrachospermum produce :
(a) Caropospores
(b) Carpogonia
(c) Gonimoblastinitials
(d) Monospores
125. Which of the following ştatements is correct about Marchantia?
(a) Male and female sex organs are borne on sessile receptacles
(b) Male and female sex organs are borne on stalked receptacles
(c) Only male sex organs are borne on sessile receptacles
(d) Only female sex organs are borne on sessile receptacles
126. The archesporium in Anthoceros differentiates into :
(a) Spores only
(b) Pseudoelators only
(c) Both spores and pseudoelators
(d) Noune of the above
127. Leptosporangiate development of sporangia occurs in :
(a) Marsilea
(b) Lycopodium
(c) Equisetum
(d) All of the above
128. A protostele in which more or less parallel plate-like regions of xylem surrounded by phloem tissue appear in transverse sections is known as :
(a) Actinostele
(b) Dictyostele
(c) Solenostele
(d) Plectostele
129. The site of light-independent reaction (dark reaction/phase) of photosynthesis is :
(a) Grana
(b) Thylakoids
(c) Stroma
(d) All of the above
130. Ribosomes are attached to cisternae at specific sites that are rich in :
(a) Ribophorin I and ribophorin II
(b) Ribophorin I and lecithin
(c) Ribophorin II and lecithin
(d) Lecithin only
131. Which of the following statements in not true about euchromatin?
(a) It stains lightly
(b) It takes part in transcription
(c) It consists of uncoiled, extended and scattered chromatin fibres
(d) It inhibits crossing over
132. The occurrence of two identical sequences, one following the other, in a chromosome segment in called as :
(a) Tandem duplication
(b) Reverse tandem duplication
(c) Displaced duplication
(d) Intercalary duplication
133. Two independent pairs of non-allelic genes neither of which will produce its effect in the absence of the other are called as :
(a) Supplementarygenes
(b) Complementary genes
(c) Pleiotrophic genes
(d) Lethal genes
134. Extranuclear genes are located in:
(a) Peroxisomes and ribosomes
(b) Ribosomes and mitochondria
(c) Mitochondria and chloroplasts
(d) Chloroplasts and Lysomes
135. An operon in which a regulatory repressor protein normally binds to the operator and prevents the transcription of the genes is called as :
(a) Negative inducible operon
(b) Negative repressible operon
(c) Positive inducible operon
(d) Positive repressible operon
136. The cofactor of DNA polymerase is :
(a) Sodiumion
(b) Potassiumion
(c) Calciumion
(d) Magnesiumion
137. Alternative start codons, other than the most common start codon of AUG in prokaryotes, are :
(a) CUG and CUC
(b) GUG and UUG
(c) GAC and CCC
(d) ACA and GUG
138. Cohesive sticky ends (COS sites) are a characteristic feature of :
(a) F-plasmid
(b) R-plasmid
(c) Cryptic plasmid
(d) Cosmid
139. Which of the following is used as a 'Molecular scissor' in genetic engineering?
(a) DNA ligase
(b) DNA polymerase
(c) Restriction endonuclease
(d) Helicase
140. The opines found in the plant crown gall tumors produced by the parasitic Agrobacterium tumefaciens are used by the bacterium :
(a) For virulence
(b) As sources of carbon and nitrogen
(c) For replication
(d) None of the above
141. The latest edition of the International Code of Botanical Nomenclature is called as :
(a) Vienna Code
(b) St Louis Code
(c) Tokyo Code
(d) New York Code
142. A specimen or illustration designated from the original material as the nomenclatural type if no holotype was indicated at the time of publication, or if it is missing, or if it is found to belong to more than one taxon is known as :
(a) Paratypes
(b) Isotype
(c) Syntype
(d) Lectotype
143. Gymnosperms in Bentham and Hooker's Classification are placed :
(a) Between dicots and monocots
(b) Before dicots
(c) After monocots
(d) None of the above
144. Each statement of couplet in a dichotomous key is called :
(a) `A bracket
(b) Anindent
(c) A lead
(d) A primary key character
145. Gynoecium in Magnolia is composed of:
(a) Numerous, spirally arranged fused carpels
(b) Numerous, spirally arranged free carpels
(c) Single unilocular carpel
(d) Single multilocular carpel
146. Capitulum inflorescence is found in the members of:
(a) Asteraceae
(b) Brassicaceae
(c) Rosaceae
(d) Poaceae
147. Similarity in species of different ancestry as a result of convergent evolution is called :
(a) Heteroplasy
(b) Parsimony
(c) Homoplasy
(d) All of the above
148. Perianth in Poaceae is represented by:
(a) Lemma
(b) Palea
(c) Rachilla
(d) Lodicules
149. Cells comprising the tunica zone of the shoot apical meritem characteristically undergo :
(a) Only anticlinal divisions
(b) Only periclinal divisions
(c) Both anticlinal and perclinal divisions
(d) Neither anticlinal nor perclinal divisions
150. Secondary wall thickenings of tracheary elements having a ladder-like appearance are called as :
(a) Annular thickenings
(b) Spiral thickenings
(c) Scalariform thickenings
(d) Reticulate thickenings
151. Addition of new fusiform initials by anticlinal divisions is characteristic of:
(a) Non-storied cambia
(b) Storied cambia
(c) Non-stratified cambia
(d) Stratified cambia
152. A pit without a complimentary pit on the opposite cell wall is known as :
(a) Simplepit
(b) Bordered pit
(c) Half-bordered pit
(d) Blind pit
153. Categorisation of wood into porous and non-porous wood is based on the :
(a) Presence and absence of vessels
(b) Presence and absence of tracheids
(c) Presence and absence of sieve tubes
(d) Presence and absence of sieve cells
154. In an amphivasal vascular bundle of monocotyledons:
(a) Phloem is present on the outside of the xylem
(b) Xylem is present on the outside of the phloem
(c) Xylem completely encircles the phloem
(d) Phloem completely encircles the xylem
155. Cataphylls of Pinus are :
(a) Foliage leaves without a distinct midrib on the long shoots
(b) Scale leaves with a distinct midrib on the dwarf shoots
(c) Foliage leảves with a distinct midrib on the long shoots
(d) A group of foliage leaves on a dwarf shoot
156. In Ephedra:
(a) Both male and female strobili are compound
(b) Only male strobilus is compound
(c) Only female strobilus is compound
(d) Neither male nor female strobulus is compound
157. Part of the micropyle formed by the outer integument is known as :
(a) Hypostase
(b) Endostome
(c) Exostome
(d) Epistase
158. Which of the following is an example of a bisporic embryo sac?
(a) Adoxa type
(b) Plumbago type
(c) Drusa type
(d) Allium type
159. The most common type of endosperm in angiosperms is :
(a) Cellular type
(b) Nuclear type
(c) Helobial type
(d) Endymion type
160. Pollenkitt is chiefly composed of:
(a) Lipid
(b) Protein
(c) Carbohydrate
(d) None of the above
161. Which of the following minerat elements plays an important role in biological nitrogen fixation?
(a) Copper
(b) Manganese
(c) Molybdenum
(d) Zinc
162. From among the various components of biomembranes, transport processes are essentially mediated by:
(a) Lipids
(b) Proteins
(c) Carbohydrates
(d) All of the above
163. Conversion of starch to organic acids in stomatal guard cells results in:
(a) Stomatal opening
(b) Stomatal closure
(c) Stomatal growth
(d) None of the above
164. Seed dormancy could be due to :
(a) Impermeability of speed coat to water
(b) Impermeability of speed coat to gases
(c) Mechanically resistant seed coat
(d) All of the above
165. Cyclic photophosphorylation involves:
(a) Only Photosystem II
(b) Both Photosystem I and Photosystem II
(c) Only Photosystem I
(d) None of the above
166. The primary substrate utilized in photorespiration is:
(a) Carbohydrate
(b) Glycolate
(c) Water and Carbon dioxide
(d) Glycine
167. Respiratory Quotient of organic acids is mostly:
(a) More than one
(b) Less than one
(c) Equal to one
(d) All of the above
168. The reactions of EMP pathway (Glycolysis) take place in :
(a) Mitochondria
(b) Nucleus
(c) Ribosomes
(d) Cytoplasm
169. Which of the following is not an attribute of enzymes ?
(a) These are proteinaceous in nature
(b) These speed up the rate of biochemical reactions
(c) These are used up in reaction
(d) These are specific in nature
170. $\alpha$-amylase synthesis is promoted by:
(a) IAA
(b) Cytokinin
(c) NAA
(d) GA
171. Photoperiodic stimulus is perceived by:
(a) Flowers
(b) Leaves
(c) Roots
(d) Buds
172. When the adaxial or morphologically upper side of an organ grows more rapidly than the abaxial side, the resulting curvature is termed as :
(a) Epinasty
(b) Hyponasty
(c) Nyctinasty
(d) Chemonasty
173. Which master horizon in a soil profile is characterized by excessive leaching of clay, iron, aluminum oxides etc?
(a) Ohorizon
(b) A horizon
(c) Ehorizon
(d) Bhorizon
174. A phenomenon in biology characterized by a positive correlation between population density and the per capita population growth rate in very small populations is known as:
(a) Allee effect
(b) Suess effect
(c) Warburg effect
(d) None of the above
175. Cuticle is poorly developed in:
(a) Xerophytes
(b) Mesophytes
(c) Hydrophytes
(d) All of the above
176. An interaction in which two interacting populations of different species benefit from the relationship but the association is not obligatory is called as :
(a) Commensalism
(b) Protocoperation
(c) Amensalism
(d) Neutralism
177. Which among the following is not an analytic community characteristic?
(a) Stratification
(b) Sociability
(c) Vitality
(d) Fidelity
178. Artemesia belongs to family:
(a) Berberidaceae
(b) Asteraceae
(c) Apiaceae ${ }^{-}$
(d) Brassicaceae
179. An oil is hydrogenated to :
(a) Increase resistance to rancidity
(b) Decrease viscosity
(c) Decrease melting point
(d) All of the above
180. Hemp fibre is obtained from:
(a) Gossipyium hirsutum
(b) Corchorus capsularis
(c) Cannabis sativa
(d) Cocos nucifera

## BOTANY - 2010

M.Sc. Botany

1. The unique base present in the DNA of T-even phages is :
(a) 5-hydroxymethyl adenine
(b) 5-hydroxymethyl guanine
(c) 5-hydroxymethyl cytosine
(d) Uracil
2. The position of heterocysts in Nostoc is :
(a) Intercalary
(b) Terminal
(c) Lateral
(d) None of the above
3. Sexual reproduction in Phytophthora is :
(a) Isogamous
(b) Oogamous
(c) Anisogamous
(d) All of the above
4. Which of the following spore types are uninucleate in Puccinia graminis ?
(a) Uredospores and Basidiospores
(b) Teleutospores Pycnidiospores
(c) Uredospores and Teleutospores
(d) Basidiospores and Pycnidiospores
5. Siphonaceous habit is characteristic of:
(a) Volvox
(b) Vaucheria
(c) Oedogonium
(d) Chara
6. A pigment absent in Xanthophyceae is :
(a) Chlorophyll
(b) Xanthophyll
(c) Carotene
(d) Phycocyanin
7. Elators in Marchantia exhibit :
(a) Hydrochasy
(b) Xerochasy
(c) Circumnutation
(d) Nutation
8. Which of the following statements is true about Anthoceros?
(a) Tuberculate rhizoids are present on ventral surface of the thallus
(b) Tuberculate rhizoids are present on dorsal surface of the thallus
(c) Smooth-walled rhizoids are present on ventral surface of the thallus
(d) Smooth-walled rhizoids are present on dorsal surface of the thallus
9. Sex organs in the prothallus of Lycopodium are :
(a) Projected
(b) Embedded
(c) Either projected or embedded
(d) Neither projected nor embedded
10. Presence of carinal canal at the base of vascular bundles is characteristics of:
(a) Rhynia
(b) Lycopodium
(c) Marsilea
(d) Equisetum
11. Lipids, proteins and carbohydrates are the main constituents of cell membrane. With respect to their relative proportions, which of the following statements is correct?
(a) All the three are present in equal proportions in a cell membrane
(b) Lipids are present in least proportion in a cell membrane
(c) Carbohydrates are present in least proportion in a cell membrane
(d) Proteins are present in least proportion in a cell membrane
12. The telomeres of eukaryotic chromosomes consists of short sequences of:
(a) Guanine rich repeats
(b) Adenine rich repeats
(c) Cytosine rich repeats
(d) Thyminerich repeats
13. How many mitotic divisions are needed for a single cell to make 128 cells ?
(a) 32
(b) 28
(c) 14
(d) 7
14. Carrier molecules in the plasma membrane are required for:
(a) Facilitated diffusion only
(b) Active transport only
(c) Both for facilitated diffusion and active transport
(d) Osmosis
15. In mitochondria, cristae act as sites for:
(a) Protein synthesis
(b) Oxidation-reduction reactions
(c) Breakdown of macromolecules
(d) Phosphorylation of flavoproteins
16. How many different kinds of gametes would be produced by a plant having the genotype AABbCC ?
(a) Three
(b) Four
(c) Nine
(d) Two
17. The enzyme that breaks hydorgen bonds in DNA is :
(a) Helicase
(b) Ligase
(c) Kinase
(d) Topoisomerase
18. In which phase of mitosis the chromatids of chromosomes separate from each other?
(a) Prophase
(b) Metaphase
(c) Anaphase
(d) Telophase
19. Which of the following are degenerate codons :
(a) GUA, GUG, GCA, GCG and GAA
(b) UUG, UUC, CCU, CAA and CUA
(c) UAA, UAG and UGA
(d) UUA, UUG, CUU, CUC, CUA and CUG
20. Synthesis of RNA molecule in some organisms is terminated by a signal recognized by:
(a) Alpha factor
(b) Gamma factor
(c) Rho factor
(d) None of the above
21. Sex organs in Ephedra are borne on :
(a) Bisexual compound strobili
(b) Unisexual compound strobili
(c) Bisexual simple strobili
(d) Unisexual simple strobili
22. Which of the following is true about Cycas ?
(a) Male strobilus and megasporophylls occur on separate individuals
(b) Male strobilus and megasporophylls occur on same individual
(c) Neither (a) nor (b)
(d) Either (a) or (b)
23. Wings in Pinus seeds develop from :
(a) Bract scales
(b) Coneaxis
(c) Ovuliferous scale
(d) Seed coat
24. Takhtajan divided angiosperms into which of the following two classes ?
(a) Lignosae and Herbaceae
(b) Magnoliopsida and Liliopsida
(c) Archichlamydeae and Metachlamydeae
(d) Choripetalae and Sympetalae
25. Which of the following is not a principle of International Code of Botanical Nomenclature?
(a) Botanical Nomenclature is independent of Zoological Nomenclature
(b) Nomenclature of a taxonomic group is based upon priority of publication
(c) The application of names of taxonomic groups is not determined by means of nomenclatural types
(d) Each taxonomic group with a particular circumscription, position and rank can bear only one correct name, the earliest that is in accordance with the rules
26. A binomial name in which the generic name and the specific epithet are identical (have same spellings) is called as :
(a) Tautonym
(b) Homonym
(c) Autonym
(d) Synonym
27. A specimen which is a duplicate of the holotype, collected from the same place, at the same time and by the same person is designated as :
(a) Holotype
(b) Isotype
(c) Syntype
(d) Lectotype
28. Syngenesious condition of stamens is found in:
(a) Lamiaceae
(b) Solanaceae
(c) Fabaceae
(d) Asteraceae
29. As per the rules of the Botanical Nomenclature Code, the names of two or more authors who publish a new species or propose a new name are linked by :
(a) et
(b) $e x$
(c) in
(d) None of the above
30. "Odines Anomali" of Bentham and Hooker includes:
(a) Plants represented only in fossil state
(b) Plants showing abnormal growth and development
(c) A few orders which could not be placed satisfactorily in classification
(d) All of the above
31. Quiescent centre occurs in :
(a) Shoot apex
(b) Root apex
(c) Both (a) or (b)
(d) Neither (a) nor (b)
32. Casparian strips contain :
(a) Cutin
(b) Pectin
(c) Suberin
(d) Wax
33. A raphide is a deposit of:
(a) Calcium oxalate
(b) Silica
(c) Starch
(d) Calcium carbonate
34. Two distinct zones of tunica and corpus in the shoot apex of angiosperms are distinguished on the basis of:
(a) Meristematic activity of cells
(b) Cytological characteristics of cells
(c) Histological characteristics of cells
(d) Plane of cell division
35. A vascular bundle in which xylem encircles the phloem tissue is called as :
(a) Amphicribal bundle
(b) Amphivasal bundle
(c) Collateral bundle
(d) Bicollateral bundle
36. The most probable function of P -proteins in sieve elements is :
(a) Deposition of callose on sieve plates
(b) Providing energy for active translocation
(c) Sealing of pores after wounding
(d) None of the above
37. Sieve tubes differ from sieve cells in :
(a) Having sieve plates at end walls
(b) Lacking nuclei
(c) Being shorter
(d) Being dead
38. When the paratracheal parenchyma surrounds the vessels in such a way that winglike lateral projections are formed, it is termed as :
(a) Vasicentric
(b) Apotracheal
(c) Diffuse-in-aggregate
(d) Aliform
39. Bulliform cells present in the epidermis of certain grasses help in :
(a) Rolling of leaves in dry weather
(b) Tracking the sun
(c) Providing strength
(d) All of the above
40. Ubisch bodies are secreted by:
(a) Endosperm
(b) Nucellus
(c) Tapetum
(d) Synergids
41. Which of the following phytohormones plays a role in the opening and closing of stomata?
(a) Indole acetic acid
(b) Abscisic acid
(c) Gibberellic acid
(d) All of the above
42. Chlorosis in nitrogen deficient plants appears:
(a) In young leaves only
(b) In mature leaves only
(c) First in young leaves and then in mature leaves
(d) First in mature leaves and then in young leaves
43. $\mathrm{CO}_{2}$ compensation point is high in :
(a) $\mathrm{C}_{3}$ plants
(b) $\mathrm{C}_{4}$ plants
(c) $\mathrm{C}_{2}$ plants
(d) None of the above
44. The phenomenon of sharp decrease in the quantum yield of photosynthesis in organisms such as Chlorella upon using monochromatic light of wavelength greater than 680 nm is called as :
(a) Warburg effect
(b) Emerson effect
(c) Red drop
(d) Richmond Lang effect
45. Movements in plants that occur in response to touch are known as :
(a) Epinasty
(b) Haptonasty
(c) Thermonasty
(d) Seismonasty
46. Single turn of citirc acid cycle yields :
(a) $2 \mathrm{FADH}_{2}, 2 \mathrm{NADH}_{2}, 2 \mathrm{GTP}$
(b) $1 \mathrm{FADH}_{2}, 3 \mathrm{NADH}_{2}, 1 \mathrm{GTP}$
(c) $1 \mathrm{FADH}_{2}, 2 \mathrm{NADH}_{2}, 1 \mathrm{GTP}$
(d) $1 \mathrm{FADH}_{2}, 1 \mathrm{NADH}_{2}, 2 \mathrm{GTP}$
47. Which of the following is responsible for apical dominance?
(a) IAA
(b) $\mathrm{GA}_{3}$
(c) ABA
(d) Florigen
48. The catalytic efficiency of two different enzymes can be compared in terms of:
(a) Formation of the products
(b) Optimum pH of the enzymes
(c) The Km value of enzymes
(d) Molecular size of the enzymes
49. Which of the following plant growth regulators is used to induce rooting in the stem cuttings of plants?
(a) Cytokinin
(b) Auxin
(c) Gibberellin
(d) Abscisic acid
50. Growth curve in most annual plants is:
(a) Linear
(b) Bell shaped
(c) Sigmoid
(d) None of the above
51. Occurrence of Zoochlorellae in the body wall of Hydra is an example of:
(a) Predation
(b) Parasitism
(c) Commensalism
(d) Mutualism
52. Diurnal temperature of soil surface varies most in a :
(a) Desert
(b) Forest
(c) Grassland
(d) Shrub land
53. Ecotone refers to :
(a) Interaction between twe populations
(b) Ecotypes of a species
(c) Transitional zone between two communities
(d) Ecads of a species
54. Which one of the following ecosystem types has the highest annual net primary productivity?
(a) Tropical deciduous forest
(b) Temperate evergreen forest
(c) Temperate deciduous forest
(d) Tropical rain forest
55. Freshwater ecosystems with continuous flow of water are called as :
(a) Lotic ecosystems
(b) Lentic ecosystems
(c) Eutrophic ecosystems
(d) Oligotrophic ecosystems
56. cDNA is:
(a) Circular DNA
(b) Complimentary DNA
(c) Coiled DNA
(d) Cytoplasmic DNA
57. Fragments of DNA formed after treatment with endonucleases are separated by:
(a) Polymerase chain reaction
(b) Colony hybridization
(c) Electrophoresis
(d) All of the above
58. The medicinal plant Saussurea belongs to family:
(a) Asteraceae
(b) Solanaceae
(c) Malvaceae
(d) Rosaceae
59. Groundnut oil is good for health because it contains:
(a) Polyunsaturated Fatty Acids (PUFA)
(b) Monounsaturated Fatty Acids (MUFA)
(c) Saturated fats
(d) All of the above
60. Which of the following combinations is correct?
(a) Tossa jute Corchorus capsularis
(b) White jute Corchorus olitorius
(c) Tossa jute Corchorus indica
(d) White jute Corchorus capsularis

## BOTANY 2006

1. Exploitation and analy i of variability of genetic resources for improvement of existing crops under cultivation is referred to as :
(a) Primary introduction
(b) secondary introduction
(c) Domestication
(d) Acclimatization cum introduction
2. Compilation of the historical "De Materia Medica" was carried out by:
(a) Bentham
(b) Bentham and Hooker
(c) Theophrastus
(d) Theophrastus and Aristotle
3. Aplanogamic type of sexual reproduction occurs in
(a) Oedogonium
(b) Chara
(c) Volvox
(d) Zygnema
4. The zoospores of Vaucheria are
(a) Aflagellate
(b) Uniflagella te
(c) Multiflagellate
(d) Biflagella te
5. The most primitive type of life cycle in algae is
(a) Haplontic
(b) Diplontic
(c) Haplobiontic
(d) Diplobiontic
6. Cleistothecia of which of the following fungus contains coiled appendages on the periderm:
(a) Uncinula
(b) Erysiphe
(c) Colletotrichum
(d) Venturia
7. Key membrane sterol in most of the fungi is
(a) Cholesterol
(b) Ergosterol
(c) Mannitol
(d) None of the above
8. Nutrition in slime fungi is
(a) Absorptive
(b) Phagotrophic
(c) Necrotrophic
(d) Autotrophic
9. Which among the following is used as a biocontrol agent?
(a) Trichoderma viridae
(b) Pythium debaryanum
(c) Phytophthora infestans
(d) Erysiphe polygoni
10. Phialidic type of conidia are found in
(a) Asperigillus
(b) Albugo
(c) Phytophthora
(d) Pythium
11. When the tissue close to vein turns yellow and the remaining surface o~stays green; the condition is known as
(a) Vein bending
(b) Vein clearing
(c) Variegation
(d) Vennation
12. When archegonia are borne at the apex of main axis or its branches, the condition is known a
(a) Acrocarpous
(b) Pleurocarpou
(c) Stigmatocarpous
(d) Cleistocarpous
13. Conducting tissue in mosses is made up of:
(a) Xylem
(b) Collenchyma
(c) Phloem
(d) Parenchyma
14. Green plastids are present in the cells of young antheridium of:
(a) Riccia
(b) Funaria
(c) Pellia
(d) Anthoceros
15. A group of fused sporangia with distinct partition walls is known as
(a) Sorus
(b) Synangium
(c) Both (a) and (b)
(d) None of the above
16. Which of the following can induce apogamy in fern gametophytes?
(a) Low concentration of sucrose'
(b) Medium concentration of sucrose
(c) High concentration of sucrose
(d) All of the above
17. Which of the following is richly found $m$ functional megasporophyte of Selaginella?
(a) Vacuoles
(b) Starch
(c) Cytoplasm
(d) Cytoplasmic RNA
18. Which of the following genera lacks a female cone?
(a) Cycas
(b) Cedrus
(c) Ephedra
(d) None of the above
19. The form genus Caytonia was first discovered by
(a) H. H. Thomas
(b) T. M. Harris
(c) K. R. Sporne
(d) B. Sahni
20. In which. geological period flowering plants first appeared?
(a) Ordovician
(b) Cambrian
(c) Devonian
(d) Cretaceous
21. Girdling leaf-traces are the characteristic feature of the stem of:
(a) Ephedra
(b) Cycas
(c) Cedrus
(d) Pinus
22. Which of the following living pteriodophytic order shows more resemblances with Rhyniaceae?
(a) Psilotales
(b) Lycopodiales
(c) Ophioglossales
(d) Equisetales
23. The International Code for Botanical Nomenclature (ICBN) governs the nomenclature of:
(a) Plants alone
(b) Plants and fungi
(c) Plants and bacteria
(d) Plan and viruses
24. The mo t primitive group in dicots as per Engler a Prantl is
(a) Ranales
(b) A teraceae
(c) Amentiferae
(d) Iagnoliaceae
25. An inventory of the plants of a defined geographical region is known as
(a) Conspectus
(b) Revision
(c) Monograph
(d) Flora
26. which of the following families are the stamens syngenesious ?
(a) Apiaceae
(b) Asteraceae
(c) Ranunculaceae
(d) Rosaceae
27. When the guard cells are surrounded by unspecialised epidermal cells; the type of stomata is
(a) Anomocytic
(b) Anisocytic
(c) Diacytic
(d) Paracytic
28. Root endodermis is generally regarded as
(a) Outer most layer of cortex
(b) Inner most layer of cortex
(c) Both of the above
(d) Either (a) or (b)
29. Cambium and cork cambium are examples of:
(a) Apical meristem
(b) Intercalary meristem
(c) Lateral meristem
(d) Primary meristem
30. Pollination occurring between two flowers on the same plant is termed as:
(a) Autogamy
(b) Xenogamy
(c) Chasmogarny
(d) Geitonogamy
31. The first division of the zygote in Piperad type of the embryogeny
(a) Vertical
(b) Transverse
(c) Oblique
(d) Either (b) or (c)
32. Synthetic seeds are:
(a) Encapsulated zygotic embryos
(b) Encapsulated somatic embryos
(c) Genetically engineered seeds
(d) None of the above
33. When the aperture is on the proximal face, the pollen grains are designated as:
(a) Zonotreme
(b) Anatreme
(c) Pantotreme
(d) Catatreme
34. When the exposed pollen wall shows rod-like elements with swollen tips, the sculpturing is called as
(a) Psilate
(b) Fossulate
(c) Pilate
(d) Baculate
35. The fluidity of biomembranes is ascribed mainly to
(a) The protein component
(b) The lipid component
(c) Both protein and lipid components
(d) Neither protein nor lipid component
36. Which one of the following is the acyl group carrier in the B oxidation of fatty acids?
(a) Coenzyme A
(b) Acyl carrier protein
(c) Both (a) and (b)
(d) Neither (a) nor (b)
37. During photorespiration which of the following reactions takes place in the mitochondrion:
(a) Conversion of glycine to serme
(b) Conversion of serine to $\mathrm{CO}_{2}$ and NH 3
(c) Both (a) and (b)
(d) None of the above
38. The receptor in plants that perceives the photoperiodic signal is a
(a) Conjugated protein
(b) Hormone
(c) Non-protein pigment
(d) None of the above
39. Gibberellins produced In the apical portions of both stems and roots cause:
(a) Stem elongation
(b) Growth of lateral branches
(c) Abscission of leaves and fruits
(d) Stem thickening
40. The sterol: phospholipid ratio of membranes is high in
(a) Glycophytes
(b) Halophytes
(c) Psamophytes
(d) Hydrophytes
41.Percentage of phanerophytes in the normal biological spectrum Raunkiaer (1934) is ?
(a) 13
(b) 26
(c) 46
(d) 62
41. Most of the energy in a temperate coniferous forest flows through:
(a) Detritus food chain
(b) Grazing food chain
(c) Auxiliary food chain
(d) All of the above
42. Maximum number of trophic levels in most food webs is about:
(a or 9
(b) 2 or 3
c) 1 or 2
d) 4 or 5
43. Which among the following accounts for much of the biome differences in Net Primary Productivity (NPP)?
a) Length of growing season
b) Leaf area
c) Soil fertility
d) None of the above
44. Pyrramid of number of a parasitic food chain would be always
a) Upright
b) In 'erted
c) Either upright or inverted
d) Neither upright nor inverted
45. Bacteria that use light as energy source and organic substances as carbon source are called as:
(a) Photoautotrophs
(b) Chemoautotrophs
(c) Photoherotrophs
(d) Chemoheterotrophs
46. Archaeobacteria differ from both eubacteria and eukaryotes in
(a) Nature of membrane lipids
(b) RNA polymerase structure
(c) Composition' of their cell walls
(d) All of the above
47. Genetic material in plant viruses is mostly:
(a) DNA
(b) RNA
(c) Both DNA and RNA
(d) None of the above
48. Which one of the following is true for spontaneous reactions?
(a) +S and -H
(b) -S and +H
(c) Both (a) and (b)
(d) Neither (a) nor (b)
49. The most abundant non-reducing soluble sugar in plants is
(a) Lactose
(b) Maltose
(c) Sucrose
(d) Cellobiose
50. The true substrate in most enzymatic reactions that involve ATIL phoryl donor is
(a) MgATp2-
(b) $\mathrm{Mg} 2+$
(c) Mg ADP-
(d) None of the above
51. Which of the following is not formed when yeast is producing wine?
(a) Pyruvic acid
(b) . Ethanol
(c) $\mathrm{CO}_{2}$
(d) Acetyl Co A
52. In feedback inhibition, a metabolic pathway is switched off by:
(a) A rise in temperature
(b) Lack of substrate
(c) Accumulation of end product
(d) Competitive inhibition
53. Covalently bound non-protein component of an enzyme is its
(a) Coenzyme
(b) Cofactor
(c) Apoenzyme
(d) Prosthetic group
54. The rainfall in a district for four (04) months was $50,40,15$ and 15 millimeters. The mean deviation of rainfall about mean for the given four months is
(a) 30
(b) 15
(c_ _? ? . U-
(d 0
The extent of correlation between two related variables decreases, the value of co relation coefficient ( $r$ ) approaches
(a) +1
(b) -1
(c) Zero
(d) None of the above
55. The arithmetic mean of a distribution, in which there are some.extremely high or low values, will either over estimate or under estimate the average position and hence is not a best
representative value. The measure of Central
Tendency in such a situation is
(a) Median
(b) Mode
(c) Standard deviation
(d) None of the above
56. How many progeny genotypes are expected after selfing of the parent having the genotype 'AABbCC' :
(a) Two
(b) Three
(c) Four
(d) Five
57. The epistatic gene differs from dominant gene in that the
(a) Epistatic gene is non-allelic
(b) Epistatic and dominant genes are present at different loci
(c) Both (a) and (b) are false
(d) Both (a) and (b) are true
58. Dominant genes ' A ' and ' B ' are required for normal hearing. A deaf couple has all children with normal hearing. The probable genotype of the couple is :
(a) AAbb $x a a B B$
(b) $\mathrm{AaBB} \times \mathrm{AABb}$
(c) $\mathrm{AaBb} \times \mathrm{AaBb}$
(d) aabb $x$ aabb
59. An allele 'A' after segregation from 'Aa' genotype produces a rm notype; the condition is called
(a) Point mutation
(b) Paramutation
(c) Frameshift mutation
(d) None of the above
60. A larkspur plant has 16 chromosomes. How many linkage groups does it have?
(a) 4
(b) '8
(c) 16
(d) 20
61. In a DNA molecule the percentage of adenine is $18 \%$; the percentage of cytosine is expected to be
(a) $18 \%$
(b) $36 \%$
(c) $27 \%$
(d) $54 \%$
62. The products of one gene required to activate another gene are called
(a) Repressor elements
(b) Co-enzymes
(c) Transcription factors
(d) None of the above
63. Restriction endonucleases cut DNA at :
(a) Palindromic sequences
(b) Methylated sequences
(c) ear exons
(d) Any site
64. The sum total of deleterious genes in a population at a particular time is
(a) Gene pool
(b) Genetic drift
(c) Genetic load
(d) Genetic imbalance
65. The chain initiation and termination codons during protein synthesis respectively are :
(a) AUG and UGA
(b) GUG and UAA
(c) Neither (a) nor (b)
(d) Both (a) and (b)
66. Which of the following commonly known medicinal herb is used for the treatment of hair fall?
(a) Bunafsha
(b) Kahzaban
(c) Van Wangun
(d) Burza
67. The commercially important active principal "Quercetin" is obtained from:
(a) Podophyllum hexandrum
(b) Atropa belladonna
(c) Arnebia benthamii
(d) Viola odorata
68. Which of the following is essential for germplasm exchange ?
(a) Plant introduction
(b) Plant assessment
(c) Plant quarantine
(d) Plant adaptability

## BOTANY 2007

1. "Little leaf' disease of brinjal is caused by ${ }^{\circ}$
(a) viruses
(b) mycoplasma
(c) bacteria
(d) phytophthora
2. Adenoviruses are:
(a) DNA containing plant viruses, spheroidal in shape with projecting fibres
(b) RNA containing plant viruses, spheroidal in shape and enveloped
(c) DNA containing animal viruses, spheroidal in shape with projecting fibers
(d) RNA containing animal viruses, spheroidal in shape and enveloped
3. Cell walls of Deuteromycetes contain
(a) chitin-glucan
(b) mannan-glucan
(c) cellulose-glucan
(d) pectin-glucan
4. Morchella is a :
(a) Parasitic hymenomycete
(b) Mycorrhizal gasteromycete
(c): Symbiotic plectomycete
(d) Saprobic discomycete
5. In some plants of Oedogonium, the androsporangia are produced on filaments which do not bear oogonia. Such plants are said to be :
(a) Gynandrosporous
(b) Idioandrosporous
(c) Androsporous
(d) Gynosporous
6. Select the odd one out in respect of the nature of sexual reproduction
(a) Chlamydomonas debaryana
(b) Chlamydomonas media
(c) Chlamydomonas coccifera
(d) Chlamydomonas eugametos
7. In which of the following species of Anthoceros the whole plant is covered with hair like outgrowths forming water-holding chambers?
(a) A. arachnoides
(bl A. giganteus
(c) A. fusiformis
(d) A. laevis
8. In the stem of Polytrichum one or two layers of cells consist of dark brown suberized walls and contain copious starchy contents. This tissue is called:
(a) Hydrom mantle
(b). Hydrom sheath
(c) Leptom mantle
(d) Piliferous layer
9. Rhynia belongs to :
(a) upper Silurian
(b) lower Devonian
(c) middle Devonian
(d) upper Devonian
10. Steles in which leaf gaps occur less frequently and are distantly placed are called:
(a) dictyosteles
(b) medullated steles
(c) perforated steles
(d). solenosteles
11. Which of the following is a single pass, single helix transmembrane protein?
(a) Glycophorin
(b) Spectrin
(c). Band 3 protein
(d) Integrin
12. Which of the following ions facilitates assemblage of subunits into a complete ribosome?
(a) $\mathrm{Na}+$
(b) $\mathrm{Ca}++$
(c) , . Mg++
(d) $\mathrm{Mn}+$
13. A plant carrying a duplicated chromosome segment is said to be
(a) Hemizygous
(b) Hyperploid
(c) Disomic haploid
(d), Addition haploid
14. Select the odd one out in terms of the genome constitution
(a) Gossypium hirsutum
(b) Nicotiana tabacum
(c) Musa esculentum
(d). Brassica juncea
15. The F2 progeny of "green-round" and "white-wrinkled" seeded parents contains 4 types of plants: (i) green-round seeded 10; (ii) "green-wrinkled" seeded 69; (iii) "white-round" seeded 85 and (iv) "white-wrinkled" seeded 15 . This suggests:
(a) duplicate gene inheritance
(b) linkage in repulsion phase
(c). independent assortment
(d) linkage in coupling phase
16. Which of the following enzymes has both exonuclease 3 ' ---+ 5' and exonuclease 5' ---+ 3' activities?
(a) cannot reeognise codons GCU, GCC and GCA
(b) can reeognise only codon GCU
(c) can reeognise only codon GCA
(d) can recogmse all the three codons
17. The anticodon IGC :
(a) Prokayotic DNA polymerase I
(b) Prokaryotic DNA polymerase II
(c) Prokaryotic DNA polymerase III
(d) Eukaryotic DNA polymerase p
18. Which of the following mutations are likely to occur if DNA is exposed to proflavin dyes ?
(a) Suppressor mutations
(b) Frame shift mutations
(c) Transition mutations
(d) Transversions

19; Isopropyl thiogalactoside is
(a) an inducer
(b) a repressor
(c) a gratuitous inducer
(d) a co-repressor
20. When shed from the sporangium, the microspores have :
(a) one prothallial cell in Cycas and two in Ephedra
(b) two prothallial cells in Cycas and one in Ephedra
(c) one prothallial cell in both
(d) two prothallial cells in both
2. Select the odd one out
a) coralloid roots
b) loosely arranged megasporophylis
c) absence of neck canal cells
(d) gametophytic endosperm.
22. Paleontological evidences reveal that the flowering plants had attained high degree of morphological specialisation during:
(a)J Triassic
(b) Jurassic
(c) Cretaceous
(d) Palaeocene
23. On the basis of carpel and stamen morphology and structure of wood which of the following plants seems to be primitive?
(a) Cucurbita spp.
(b) Solanum spp.
(c) Convolvulus spp.
(d) Degeneria spp.
24. +ffi, $15^{\prime} \mathrm{C} 5 \sim \sim 5 \mathrm{G}(2)$ is the floral formula of :
(a)' Helianthus annuus
(b) Brassica campestris
(c) Lathyrus odoratus
(d) l . Solanum nigrum
25. A small cup shaped inflorescence con iting of a single pistillate flower in the centre surrounded by numerous staminate flowers is called
(a) Glomerule
(b) Cyathium
(c). Hypanthodium
(d) Verticillaster
26. Which one of the following is considered equivalent to perianth ?
(a)' Glumes
(b) Lodicules
(c) Superior palea
(d) Inferior palea
27. The process of grouping of organisms into taxa on the basis of overall similarities is called
(a) phenetics
(b)- cladistics
(c) alpha taxonomy
(d) beta taxonomy
28. "Systema Naturae" was written by:
(a) Charles Robert Darwin
(b) George Bentham
(c) Jean Baptiste Lamarck
(d) Carolus Linnaeus
29. According to Bentham and Hooker's classification system the order Rosales falls in which of the following series?
(a) Thalamiflorae
(b)Bicarpillatae
(c) Calyciflorae
(d) Inferae
30. Which of the following plants is perennial and monocarpic ?
(a) Agave americana
(b) Cocos nucifera
(c) Phoenix dactylifera
(d) ,; Hevea brasiliensis

Botany 6
31. Which one of the following is different from others in respect of the nature of its roots?
(a) Sonneratia sp.
(b) Avicinnia sp.
(c) Heritiera sp.
(d) Pandanus sp.
32. In some plants the leaves occur along a straight vertical line. This condition is called:
(a) Distichous
(b) Parastichous
(c) Orthostichous
(d)- Unistichous
33. Alburnum and Duramen respectively are alternate names of :
(a) heartwood and sapwood
(b) sapwood and heartwood
(c) -porous wood and ring-porous wood
(d) ring-porous wood and diffuse-porous wood
34. The sclerenchyma of cortex originates from:
(a) Ra initials
(b) Fusiform initials
(c) Protoderm
(d) Periblem
35. The first lower most leaves of a plant's side branch are called
(a) cataphylls
(b) prophylls
(c) hypsophylls
(d) platyclades
36. The book entitled "Plant Embryology" was written by
(a) Karl Schnarf
(b) P. Maheshwari
(c) D.A. Johansen
(d) G. Davis
37. In respect of chromosome number which one of the following is different?
(a) Embryo sac
(b) Archesporium
'(c) Sporogenous tissue
(d). Spore mother cells
38. In Dianthus the style is much longer than the stamens. This condition is called:
(a) Dichogamy
(b) Herkogamy
(c)." Heterostyly
(d) None of the above
39. ॥f W of a living plant cell is the sum of :
(a) wall pressure and pressure potential
(b) wall pressure and matric potential
(c) osmotic potential and pressure potential
(d).. osmotic potential and solute potential
40. Which of the following diseases is caused in plants due to deficiency of Zn ?
(a) Heart rot of beats
(b) Whiptail of cauliflower
(c). Grey speck of oats
(d) Little leaf of apples
41. Which of the following compounds is a prosthetic group?
(a) FAD
(b) Biotin
(c) LDH
(d) NAD
42. A substrate fails to join the enzyme because its active site is deformed by an analogue of the substrate. This process is called
(a) Allosteric inhibition
(b). Competitive inhibition
(c), E.nd product inhibition
(d) Feedback inhibition
43. Which of the following compounds serves as the electron donor during biological nitrogen fixation?
(a) 6-Phosphogluconic acid
(b) Acetyl phosphate
(c) Dinitrogeri reductase
(d).Pyruvic acid
44. For carbon fixation during "dark reaction" the three carbon atoms of each

PGA molecules are derived from:
(a) RuBP
(b) $\mathrm{CO}_{2}$
(c) $\mathrm{RuBP}+\mathrm{CO} 2$
(d), $\mathrm{RuBP}+\mathrm{CO} 2+\mathrm{PEP}$
45. Which one of the following facts explains "Warburg Effect" ?
(a)" Rate of photosynthesis decreases at low 02 concentration
(b) Rate of photosynthesis increases at low 02 concentration
(c) Rate of photosynthesis decreases at high 02 concentration
(d) Rate of photosynthesis increases at high 02 concentration

46 " " The seeds of lettuce are
(a) non-photoblastic
(b) positively photoblastic
(c) negatively photoblastic
(d) ABA induced
47. Plant leaves are:
(a) Plageotropic
(b) "Diageotropic
(c) Ageotropic
(d) Negatively geotropic
48. Which one of the following compounds shows "Richmond-Lang" effect?
(a) IAA
(b) $A B A$
(c) $\mathrm{GA}_{3}$
(d) Kinetin
49. The correct sequence of electron acceptors in ATP synthesis" is :
(a) Cytochrome $a, a 3^{\prime} b$, c
(b) Cytochrome b, c, $a, a 3$
(c) Cytochrome b, c, $a 3^{\prime} a$
(d)." Cytochrome c, $b, a, a 3$
50. Who amongst the following has contributed extensively to the study of Indian grass-land ecology?
(a) R Misra
(b) G.S. Puri
(c) J.S. Singh
(d) RR. Das
51. Which of the following statements is true?
(a) The ecological pyramid of numbers is inverted in a tree ecosystem
(b) The ecological pyramid of numbers is upright in a tree ecosystem
(c) The ecological pyramid of numbers is inverted in herbaceous ecosystem
(d) The ecological pyramid of biomass is upright in an aquatic ecosystem
52. The plant species that thrive well in narrow salinity and narrow temperature ranges are called respectively as :
(a) Euryhaline and Eurythermal
(b) Stenohaline and Stenothermal
(c) Stenol'r'aJ/ne and Eurythermal
(d) Euryhaline and Stenothermal
53. Acacia senegal and Rhizophora sp. respectively are
(a) Psammophyte-Lithophyte
(b) Lithophyte-Psychrophyte
(c) Psychrophyte-Halophyte
(d) Psammophyte-Halophyte
54. Morphologically different populations when grown in an identical habitat become uniform and the variations disappear. Such populations are called:
(a)' Ecotones
(b) Ecoclines
(c) Ecads
(d) Ecotypes
55. A climax community represented by a single dominant species is called
(a)" Society
(b) Lociation
(C) Consociation
(d) Association
56. Which of the following plants produces a caryopsis ?
(a) Triticum aestivum
(b) Artemisia annиa
(c).. Solanum tuberosum
(d) Lathyrus odoratus
57. The famous timber "Saguan" is obtained from
(a)Eucalyptus globosus
(b) Tectona grandis
(c)Shorea robusta
(d) Dalbergia sissoo
58. The common gunny bag fibre is obtained from
(a) Crotolaria juncea
(b) Cocos nucifera
(c) Corchorus capsularis
(d) Quercus superba
59. pBR327 is :
(a) yeast plasmid vector
(b) phagemid pBluescript vector
(c) pUC vector
(d) E. coli plasmid vector
60. Which of the following properties of Ti plasmids ofAgrobacterium made them a suitable choice for use as vectors?
(a) Large size
(b) Absence of unique restriction sites
(c) Tumour induction properties
(d) Presence of vir gene.

## BOTANY 2008

1. Bacteria cannot survive in a highly salted pickle because
(A) Salt inhibits reproduction
(B) Pickle, does not contain nutrients necessary for bacterial growth
(C) Bacteria do not get enough light for photosynthesis
(D) Bacterial cells become plasmolysed and consequently killed
2. In which of the following conditions transpiration would be the most rapid?
(A) High humidity
(B) Excess of water in the soil
(C) Low humidity and high temperature
(D) Low wind velocity
3. Which of the following denotes the covalently bound non-protein component of 'an enzyme?
(A) Coenzyme
(B) Cofactor
(C) Apoenzyme
(D) Prosthetic group
4.' Majority of the higher plants growing in well-aerated soils rich in organic matter preferably utilize:
(A) $\mathrm{NH}_{4}+$
(B) $\mathrm{NO}_{2}$
(C) $\mathrm{NO}_{3}$
(D) Organic nitrogen-
4. In most of the enzymatic reactions that involve ATP as the phosphoryl donor, the true substrate is
(A) Mg ATP2-
(B) Mn ATP2-
(C) Ca ATP2-
(D) None of the above
5. During photorespiration, the conversion of glycine to serine, and of serine to CO 2 and NH 3 takes place in :
(A) Chloroplasts
(B) Mitochondria
(C) Peroxisomes
(D) None of the above
6. Which of the following enzymes is/are synthesized de novo during the germination of lipid-storing seeds?
(A) Isocitrate lyase
(B) Malate synthetase
(C) Both of the above
(D) None of the above
7. Which of the following plant hormones delay senescence?
(A) Cytokinins
(B) Auxins
(C) Gibberellins
(D) Ethylene
8. The photosynthetically active radiation (PAR) is
(A) $<400 \mathrm{~nm}$
(B) Between 400 to 700 nm
(C) $>740, \mathrm{~nm}$
(D) None of the above
9. Sleep movement of beans is an example of:
(A) Epinasty
(B) Nyctinasty
(C) Thigmonasty
(1) Seismonasty
10. In the hydrological cycle, precipitation exceeds evaporation and transpiration over the:
(A) Land surfaces
(B) Oceans
(C) Both of the above
(D) None of the above
11. The length of the food chains is limited by :
(A) Less energy available to support more trophic levels
(B) Less ecological efficiency of different trophic levels
(C) Both of the above
(D) High energy available to disrupt trophic levels
12. The pioneer plants in the secondary succession are usually:
(A) Lichens
B) Weeds
(C) Ferns
(D) All of the above
13. Aerial roots, vivipary and succulence are the common adaptations of:
(A) Xerophytes
(B) Hydrophytes
(C) Mesophytes
(D) Halophytes
14. Kashmir Valley falls within the Indian biogeographic region of:
(A) Trans-Himalaya
(B) Eastern Himalaya
(C) Northwestern Himalaya
(D) Central Himalaya
15. Ecologically, a population is defined as :
(A) A single group of interbreeding individuals of the same species
(B) A single group of interbreeding individuals of different species
(C) A single group of interbreeding individuals of a few species
(D) A single group. of interbreeding individuals of many species
16. Which of the following genera includes fibre plants?
A) Oryza
B) Brassica
(C) Atropa
(D) Gossypium
17. 'The drugs extracted from Podophyllum hexandrum are
(A) Anti-carcinogenic
(B) Sedative
(C) Diuretic
(D) Aphrodisiac
18. Which of the following is used as a cloning vector in plants?
(A) Cosmid
(B) Phagemid
(C) Ti Plasmid
(D) YAC
19. When a mature cell reverts back to meristematic state and forms an undifferentiated callus tissue, the process is termed as
(A) Postdifferentiation
(B) Redifferentiation
(C) Dedifferentiation
(D) Predifferentiation
20. In diploid organisms, the formation of multivalents at meiosis is due to
(A) Monosomy
(B) Inversion
(C) Duplication
(D). Reciprocal translocation
21. An anticodon of $t R N A$ recognizes more than one codon of $m R N A$. This explains:
(A) Wobble hypothesis
(B) Degeneracy of genetic code
(C) U.niversality of genetic code
(D) Triplet nature of genetic code
22. How many Trisomies are possible in an individual with $2 n=20$
(A) 5
(B) 10
(C) 15
(D) 20
23. A wild allele 'A' after segregation from 'Aa' genotype gives a mutant phenotype; the condition is called as
(A) Point mutation
(B) Paramutation
(C) Frameshift mutation
(D) Back mutation
24. PBR-322 is :
(A) An artificially constructed plasmid
(B) A natural plasmid
(C) A cosrnid
CD) A phagemid
25. In a DNA molecule with percentage of Guanine as 24 , Adenine is expected to be:
(A) $52 \%$
(B) $48 \%$
(C) $26 \%$
(D) " $24 \%$
26. The $\sim$ fatty acid tail in a phospholipid molecule is
(A) Hydrophobic
(B) Hydrophilic
(C) Amphipathic
(D) None of the above
27. Which DNA sequences are functional even at a great distance from either side of the transcriptional initiation site of a gene?
(A) Response elements
(B) Promoters
(C) Enhancers
(D) Operators
28. Brown eye is dominant over blue eye. A brown-eyed couple has a blue-eyed child. The genotype of the couple would be
(A) $\mathrm{BB} \times \mathrm{bb}$
(B) $\mathrm{bb} \times \mathrm{bb}$
(C) $\mathrm{BB} \times \mathrm{Bb}$
(D) $\mathrm{Bb} \times \mathrm{Bb}$
29. Which mutation of the sequence GATCCT is a transition?
(A) GGTCCT
(B) GTTCCT
(C) GTATCCT
(D) GTCCT
30. A motile flagellated asexual cell is called:
(A) Sperm
(B) Zoospore
(C) Oospore
CD) Androspore
31. Algae are classified into major groups on the basis of:
(A) Nature of the reserve food product
(B) Chemical composition'of the cell wall
(C) The type of pigment
(D) 'Vegetative characters
32. The conjugating gametangia of Rhizopus are
(A). Physiologically similar but morphologically dissimilar
(B) Physiologically dissimilar but morphologically similar
(C) Physiologically similar and morphologically similar
(D) Physiologically dissimilar and morphologically dissimilar
33. All fungi lack :
(A) Centrioles
(B) Cell wall
(C) Rhizoids
(D) Haustoria
34. The capsule of the sporophyte in Polytrichum lacks:
(A) Operculum
(B) Peristome
(C) Colume lla
(D) None of the above
35. Equisetum is :
(A) Incipiently heterosporous
(B) Distinctly heterosporous
(C) Homosporous
(D) Asporous
36. The form genus Rhynia was discovered by:
(A) Kidston and Lang
(B) Arnold
(C) Birbal Sahni
(D) Campbell
38.The simplest known sporophyte among Bryophyta occurs in
(A) Funaria
(B) Anthoceros
(C) Marchantia
(D) Riccia
37. One of the main reasons for including Cyanophyceae in Procaryota is:
(A) Absence of sexual reproduction
(B) Absence of flagellated spores
(C)Absence of nuclear membrane
(D) Presence of mucilaginous sheath
38. The genome of plant viruses is mostly:
(A) ssDNA
(B) ssRNA
(C) dsDNA
(D) dsRNA
39. Which of the following is not a characteristic feature of Cycas?
(A) Circinate vernation of foliage leaves
(B) Armed parenchyma
(C) Motile sperms
(D) Vessels in the xylem
40. K.R Sporne (1974) has placed $\sim$ the order Cordaitales in the group:
(A)Coniferopsida
(B)Cycadopsida
(C)Gnetopsida
(D)Cordaitopsida
41. The form genus Caytonia represents
(A) Microsporophyll
(B) Megasporophyll
(C) Foliage leaf
(D) All of the above
42. Which of the following statements in not correct?
(A) All seed plants are heterosporous
(B). Selaginella shows incipient seed habit
(C) All vascular plants bear seeds
(D) The seeds have survival value
43. Amongst the following attributes of a flower, which one is considered to be the primitive?
(A) Floral parts fused
(B) Ovary superior
(C) Symmetry bilateral
(D) Floral parts reduced to less than four
(A)
44. In tetradynamous condition, the stamens are arranged in two whorls of:
(A) 2 (short) +2 (long)
(B) 2 (long) +4 (short)
(C) 4 (short) +4 (long)
(D) 4 (long) +2 (short)
45. In a dichotomous taxonomic key, the statement "Flowers red" would be called:
(A) A lead
(B) A couplet
(C) A triplet
(D) A character
46. The Pome type of fruit occurs in
A) Pomegranate
(B) Peach
(C) Plum
(D) Pear
47. In a descending order, the correct sequence of the following categories in the taxonomic hierarchy would be :
(A) Class, Division, Order, Family, Genus, Species
(B) Order, Division, Class, Family, Genus, Species
(C) Division, Class, Order, Family, Genus, Species
(D) Division, Order, Class, Family, Genus, Species
48. Bentham and Hooker's system of classification of plants was published in the
(A) Genera Plantarum
(B) Species Plantarum
(C) Historia Plantarum
(D) Systema Naturae
49. The first pollinating agents in angiosperms 'were probably
(A) Beetles
(B) Birds
(C) Bats
D) Butterflies
50. The Quiescent Center is a reservoir of cells showing
(A) High meristematic activity
(B) Occasional meristematic activity
(C) No meristematic activity
(D) Annual meristematic activity
51. The companion cells are absent in :
(A) Halophytes
(B) Xerophytes
(C) Monocots
(D) Gymnosperms
52. Which of the following structures is not found in an angiosperm leaf?
(A) Periderm
(B) Guard cell
(C) Chloroplast
(D) -Phloem
53. The structural arrangement of wood components is called as
(A) Texture of wood
(B). Figure of wood
(C) Grain of wood
(D) Gravity of wood
54. The annual growth rings are distinct in plants growing in the:
(A) Tropical regions
(B) Arctic regions
(C). Grasslands
(D) Temperate regions
55. The Tunica and Corpus regions of the shoot apex are usually distinguished by the:
(A) Numbers of cell division
(B) Rates of cell division
(C) Planes of cell division
(D) None of the above

58: The female gametophyte of a typical dicot at the time of fertilization is
(A) 8-nucleate, 8-celled
(B) 8-nucleate, 7-celled
(C) 7-nucleate, 7 -celled
(D) 7-nucleate, 8-celled
59. The function of the tapetum in an anther is related to:
(A) Dehiscence
(B) Division"
(C) Protection
(D) Nutrition
60. The single cotyledon in grass embryo is called
(A) Scutellum
B) Coleorhiza
(C) Coleoptile
(D) Endothelium
