177. For a normal eye, the cornea of eye provides a converging power of 40 D and the least converging power of the eye lens behind the cornea is 20 D. Using this information, the distance between the retina and the cornea - eye lens can be estimated to be:
- (1) 2.5 cm
  - (2) 1.67 cm
  - (3) 1.5 cm
  - (4) 5 cm
178. A parallel beam of fast moving electrons is incident normally on a narrow slit. A fluorescent screen is placed at a large distance from the slit. If the speed of the electrons is increased, which of the following statements is correct?
- (1) The angular width of the central maximum of the diffraction pattern will increase.
  - (2) The angular width of the central maximum will decrease.
  - (3) The angular width of the central maximum will be unaffected.
  - (4) Diffraction pattern is not observed on the screen in the case of electrons.
179. Two pith balls carrying equal charges are suspended from a common point by strings of equal length, the equilibrium separation between them is r. Now the strings are rigidly clamped at half the height. The equilibrium separation between the balls now become:

- (1)  $\left(\frac{r}{\sqrt{3/2}}\right)$
- (2)  $\left(\frac{2r}{\sqrt{3}}\right)$
- (3)  $\left(\frac{2r}{3}\right)$
- (4)  $\left(\frac{1}{\sqrt{2}}\right)^2$

180. A stone falls freely under gravity. It covers distances  $h_1, h_2$  and  $h_3$  in the first 5 seconds, the next 5 seconds and the next 5 seconds respectively. The relation between  $h_1, h_2$  and  $h_3$  is:

- (1)  $h_1 = \frac{h_2}{3} = \frac{h_3}{5}$
- (2)  $h_2 = 3h_1$  and  $h_3 = 3h_2$
- (3)  $h_1 = h_2 = h_3$
- (4)  $h_1 = 2h_2 = 3h_3$
