

CURRICULUM & SYLLABUS

BACHELOR OF TECHNOLOGY
in
Electronics and Communication Engineering
(For students admitted in 2013-2014 and afterwards)

DEPARTMENT OF ECE

Faculty of Engineering and Technology, SRM University

SRM Nagar, Kattankulathur – 603203, Kancheepuram District, Tamilnadu

B.Tech. Electronics and Communication Engineering
Curriculum – 2013
(Applicable for students admitted from the academic year 2013-14 onwards)

SEMESTER I						
COURSE CODE	CATEGORY	COURSE NAME	L	T	P	C

BT1001	Biology for Engineers

Course Number and Title											
MA1001 CALCULUS AND SOLID GEOMETRY											
Credits / Contact Hours											
4 / 75											
Instructor Name											
Dr.K.Ganesan											
Textbooks, References											
<ul style="list-style-type: none"> • Kreyszig Kreyszig E, “Advanced Engineering Mathematics”, John Wiley & Sons. Singapore, 10th edition, 2012 • Ganesan K, Sundarammal Kesavan, K.S.Ganapathy Subramanian & V.Srinivasan, “Engineering Mathematics”, Gamma publications, Revised Edition, 2013 • Grewal B.S, Higher Engineering Mathematics, Khanna Publications, 42nd Edition, 2012. • Veerajan T, “Engineering Mathematics I”, Tata McGraw Hill Publishing Co, New Delhi, 5th edition, 2006. • Kandasamy P etal., “Engineering Mathematics”, Vol.I (4th revised edition), S.Chand &Co., New Delhi, 2000. • Narayanan S, Manicavachagom Pillay T.K, Ramanaiyah G, “Advanced Mathematics for Engineering students”, Volume I (2nd edition), S.Viswanathan Printers and Publishers, 1992. • Venkataraman M.K., “Engineering Mathematics” – First Year (2nd edition), National Publishing Co., Chennai, 2000 											
Purpose											
To impart analytical ability in solving mathematical problems as applied to the respective branches of Engineering											
Prerequisites						Co-requisites					
Nil						Nil					
Required, Elective or Selected Elective (as per Table 5.1a)											
Required											
Instructional Objectives											
<ol style="list-style-type: none"> 1. To apply advanced matrix knowledge to Engineering problems. 2. To equip themselves familiar with the functions of several variables. 3. To familiarize with the applications of differential equations. 4. To improve their ability in solving geometrical applications of differential calculus problems 5. To expose to the concept of three dimensional analytical geometry. 											
Student Outcomes from Criterion 3 covered by this Course											
Student outcome	a	b	c	d	e	f	g	h	i	j	K
	X				X						
Mapping of instructional objectives with student outcome	1-5				1-5						
List of Topics Covered											
UNIT I - MATRICES (15 hours) Characteristic equation – Eigen values and Eigen vectors of a real matrix – Properties of Eigen values – Cayley – Hamilton theorem orthogonal reduction of a symmetric matrix to diagonal form – Orthogonal matrices – Reduction of quadratic form to canonical form by orthogonal transformations.											

UNIT II - FUNCTIONS OF SEVERAL VARIABLES (15 hours)

Function of two variables – Partial derivatives – Total differential – Taylor’s expansion – Maxima and Minima – Constrained Maxima and Minima by Lagrangian Multiplier method – Jacobians – Euler’s theorem for homogeneous function.

UNIT III - ORDINARY DIFFERENTIAL EQUATIONS (15 hours)

Linear equations of second order with constant and variable coefficients – Homogeneous equation of Euler type – Equations reducible to homogeneous form – Variation of parameter – Simultaneous first order with constant co-efficient.

UNIT IV - GEOMETRICAL APPLICATIONS OF DIFFERENTIAL CALCULUS (15 hours)

Curvature – Cartesian and polar coordinates – Circle of curvature – Involutives and Evolutes – Envelopes – Properties of envelopes.

UNIT V - THREE DIMENSIONAL ANALYTICAL GEOMETRY(15 hours)

Equation of a sphere – Plane section of a sphere – Tangent Plane – Orthogonal Sphere - Equation of a cone – Right circular cone – Equation of a cylinder – Right circular cylinder.

Purpose	
To impart analytical ability in solving mathematical problems as applied to the respective branches of Engineering.	
Prerequisites	Co-requisites
Nil	Nil
Required, Elective or Selected Elective (as per Table 5.1a)	
Required	
Instructional Objectives	
1. To have knowledge in multiple calculus	

2. To improve their ability in Vector calculus
3. To equip themselves familiar with Laplace transform
4. To expose to the concept of Analytical function
5. To familiarize with Complex integration.

Student Outcomes from Criterion 3 covered by this Course

Student outcome	a	b	c	d	e	f	g	h	i	j	k
	X				X						
Mapping of instructional objectives with student outcome	1-5				1-5						

List of Topics Covered

UNIT I - MULTIPLE INTEGRALS (15 hours)

Double integration in Cartesian and polar coordinates – Change of order of integration – Area as a double integral – Triple integration in Cartesian coordinates – Conversion from Cartesian to polar – Volume as a Triple Integral.

UNIT II - VECTOR CALCULUS (15 hours)

Gradient, divergence, curl – Solenoidal and irrotational fields – Vector identities (without proof) – Directional derivatives – Line, surface and volume integrals – Green’s, Gauss divergence and Stoke’s theorems (without proof) – Verification and applications to cubes and parallelepipeds only.

UNIT III - LAPLACE TRANSFORMS (15 hours)

Transforms of simple functions – Basic operational properties – Transforms of derivatives and integrals – Initial and final value theorems – Inverse transforms – Convolution theorem – periodic functions – Applications of Laplace transforms for solving linear ordinary differential equations up to second order with constant coefficients only.

UNIT IV - ANALYTIC FUNCTIONS (15 hours)

Definition of Analytic Function – Cauchy Riemann equations – Properties of analytic functions – Determination of harmonic conjugate – Milne-Thomson’s method – Conformal mappings: $1/z$, az , $az+b$ and bilinear transformation.

UNIT V - COMPLEX INTEGRATION (15 hours)

Line integral – Cauchy’s integral theorem (without proof) – Cauchy’s integral formulae and its applications – Taylor’s and Laurent’s expansions (statements only) – Singularities – Poles and Residues – Cauchy’s residue theorem – Contour integration – Unit circle and semi circular contour.

Course Number and Title

MA1003 TRANSFORMS AND BOUNDARY VALUE PROBLEMS

Credits / Contact Hours

4 / 60

Instructor Name

Dr.K.Ganesan

Purpose

To impart analytical ability in solving mathematical problems as applied to the respective branches of Engineering.

Prerequisites

Nil

Co-requisites

Nil

Required, Elective or Selected Elective (as per Table 5.1a)

Required

Instructional Objectives

1. To know to formulate and solve partial differential equations
2. To have thorough knowledge in Fourier series
3. To be familiar with applications of partial differential equations
4. To gain good knowledge in the application of Fourier transform
5. To learn about Z- transforms and its applications

Student Outcomes from Criterion 3 covered by this Course

Student outcome	a	b	c	d	e	f	g	h	i	j	k
	X				X						
Mapping of instructional objectives with student outcome	1-5				1-5						

List of Topics Covered

UNIT I - PARTIAL DIFFERENTIAL EQUATIONS (12 hours)

Formation – Solution of standard types of first order equations – Lagrange’s equation – Linear homogeneous partial differential equations of second and higher order with constant coefficients - Classification of second order linear partial differential equations including the reduction to the above types – Separable Variable Method.

UNIT II - FOURIER SERIES (12 hours)

Dirichlet’s conditions – General Fourier series – Half range Sine and Cosine series – Parseval’s identity – Harmonic Analysis.

UNIT III - ONE DIMENSIONAL WAVE & HEAT EQUATION (12 hours)

Boundary and initial value problems - Transverse vibrations of elastic string with fixed ends – Fourier series solutions – One dimensional heat equation - Steady and transient states – problems – Excluding thermally insulated ends.

UNIT IV - FOURIER TRANSFORMS (12 hours)

Statement of Fourier integral theorem(proof omitted) – Fourier transform pairs – Fourier Sine and Cosine transforms – Properties – Transforms of simple functions – Convolution theorem – Parseval’s identity – Integral equations.

UNIT V - Z-TRANSFORMS AND DIFFERENCE EQUATIONS (12 hours)

Z-transform – Elementary properties – Inverse Z-transform – Convolution theorem – Formation of Difference equations – Solution of difference equations using Z-transform.

Course Number and Title											
MA1024 PROBABILITY AND RANDOM PROCESS											
Credits / Contact Hours											
4 / 60											
Instructor Name											
Dr.K.Ganesan											
Textbooks, References											
<ul style="list-style-type: none"> • Veerarajan T, “Probability, Statistics and Random Processes”, Tata McGraw Hill, 3rd edition, 2008. • Trivedi K S, “Probability and Statistics with reliability, Queueing and Computer Science Applications”, Prentice Hall of India, New Delhi, 2nd revised edition, 2002. • Sivaramakrishna Das P. and Vijayakumari.C, A Textbook of Probability and Random Processes, Viji’s academy, 2010 • Papoulis, Probability, Random variables and stochastic processes, 4th edition, Tata McGraw Hill Company, 2002. 											
Purpose											
To introduce the students to the idea of probability and random process, an important mathematical tool in signal processing.											
Prerequisites					Co-requisites						
Nil					Nil						
Required, Elective or Selected Elective (as per Table 5.1a)											
Required											
Instructional Objectives											
<ol style="list-style-type: none"> 1. To acquire knowledge about Probability and Random variables. 2. To gain knowledge on 2 - D Random variables. 3. To expose to the concepts of Random process. 4. To gain knowledge about the Correlation Functions. 5. To learn about the applications of Fourier Transforms like Spectral Density and others. 											
Student Outcomes from Criterion 3 covered by this Course											
Student outcome	a	b	c	d	e	f	g	h	i	j	k
	X				X						
Mapping of instructional objectives with student outcome	1-5				1-5						
List of Topics Covered											
UNIT I-PROBABILITY DISTRIBUTIONS (15 hours) Random Variables - Moments - Moment generating function - Binomial, Poisson, Geometric, Exponential and Normal distributions - Functions of Random Variables.											
UNIT II-TWO DIMENSIONAL RANDOM VARIABLES (12 hours) Two dimensional Random Variables - Marginal and conditional distributions – Transformation of Random Variables - central limit theorem - simple problems.											

UNIT III-RANDOM PROCESSES (12 hours)

Classification of Random processes - Stationarity - WSS and SSS processes - Poisson Random process - Renewal Process - Markov Chain and transition probabilities.

UNIT IV-CORRELATION FUNCTIONS (9 hours)

Autocorrelation function and its properties - Cross Correlation function and its properties - Linear System with Random inputs - Ergodicity.

UNIT V-SPECTRAL DENSITY (12 hours)

Power spectral Density Function - Properties - System in the form of convolution - Unit Impulse Response of the System - Einstein - Weiner-Khinchine Relationship - Cross Power Density Spectrum - Properties.

	X		X		X						X
Mapping of instructional objectives with student outcome	1		4		2						3
List of Topics Covered											
<p>UNIT I – MECHANICAL PROPERTIES OF SOLIDS AND ACOUSTICS (9 hours) Mechanical properties of solids: Stress-strain relationship – Hooke’s law – Torsional Pendulum – Young’s modulus by cantilever – Uniform and non-uniform bending — Stress-strain diagram for various engineering materials – Ductile and brittle materials – Mechanical properties of Engineering materials (Tensile strength, Hardness, Fatigue, Impact strength, Creep) – Fracture – Types of fracture (Elementary ideas). Acoustics: Intensity – Loudness – Absorption coefficient and its determination – Reverberation – Reverberation time – Factors affecting acoustics of buildings and their remedies – Sources and impacts of noise – Sound level meter – Strategies on controlling noise pollution – Ultrasonic waves and properties – Methods of Ultrasonic production (Magnetostriction and Piezoelectric) – Applications of Ultrasonics in Engineering and medicine.</p> <p>UNIT II – ELECTROMAGNETIC WAVES, CIRCUITS AND APPLICATIONS (9 hours) Del operator – grad, div, curl and their physical significances - displacement current –Maxwell’s equations (derivation) – Wave equation for electromagnetic waves – Propagation in free space – Poynting theorem – Characteristic of Transverse electric and magnetic waves – Skin depth – Rectangular and circular waveguides – High powered vacuum-based cavity magnetrons – Applications including radars, microwave oven and lighting systems.</p>											

UNIT III – LASERS AND FIBER OPTICS (9 hours)

Lasers: Characteristics of Lasers – Einstein’s coefficients and their relations – Lasing action – Working principle and components of CO₂ Laser, Nd-YAG Laser, Semiconductor diode Laser, Excimer Laser and Free electron Laser – Applications in Remote sensing, holography and optical switching – Mechanism of Laser cooling and trapping.

Fiber Optics: Principle of Optical fiber – Acceptance angle and acceptance cone – Numerical aperture – V-number – Types of optical fibers (Material, Refractive index and mode) – Photonic crystal fibers – Fiber optic communication – Fiber optic sensors.

UNIT IV – QUANTUM MECHANICS AND CRYSTAL PHYSICS (9 hours)

Quantum mechanics: Inadequacies of Classical Mechanics – Duality nature of electromagnetic radiation – De Broglie hypothesis for matter waves – Heisenberg’s uncertainty principle – Schrödinger’s wave equation – Particle confinement in 1D box (Infinite Square well potential). **Crystal Physics:** Crystal directions – Planes and Miller indices – Symmetry elements – Quasi crystals – Diamond and HCP crystal structure – Packing factor – Reciprocal lattice – Diffraction of X-rays by crystal planes – Laue method and powder method – Imperfections in crystals.

UNIT V – GREEN ENERGY PHYSICS (9 hours)

Introduction to Green energy – **Solar energy:** Energy conversion by photovoltaic principle – Solar cells – **Wind energy:** Basic components and principle of wind energy conversion systems – **Ocean energy:** Wave energy – Wave energy conversion devices – Tidal energy – single and double basin tidal power plants – Ocean Thermal Electric Conversion (OTEC) – **Geothermal energy:** Geothermal sources (hydrothermal, geo-pressurized hot dry rocks, magma) – **Biomass:** Biomass and bio-fuels – bio-energies from wastages – **Fuel cells:** H₂O₂ – **Futuristic Energy:** Hydrogen – Methane Hydrates – Carbon capture and storage (CCS).

* One problem sheet consisting of 10 to 15 problems is to be prepared for each unit and discussed in the class.

* Few problems based on design considerations related to appropriate branches of engineering can be incorporated in each problem sheet

Mapping of instructional objectives with student outcome	1-6	1,6	3		2,5						4
List of Topics Covered											
UNIT I - WATER TREATMENT (9 hours) Water quality parameters: Physical, Chemical & Biological significance - Hardness of water - estimation of hardness (EDTA method) - Dissolved oxygen – determination (Winkler's method), Alkalinity - determination - disadvantages of using hard water in boilers: Scale, sludge formation - disadvantages - prevention - treatment: Internal conditioning - phosphate, carbon and carbonate conditioning methods - External: Zeolite, ion exchange methods - desalination - reverse osmosis and electro dialysis - domestic water treatment.											

UNIT II - POLYMERS AND REINFORCED PLASTICS (9 hours)

Classification of polymers - types of polymerization reactions - mechanism of addition polymerization: free radical, ionic and Ziegler - Natta - effect of structure on the properties of polymers - strength, plastic deformation, elasticity and crystallinity - Preparation and properties of important resins: Polyethylene, PVC, PMMA, Polyester, Teflon, Bakelite and Epoxy resins - compounding of plastics - moulding methods - injection, extrusion, compression and calendaring - reinforced plastics - FRP – Carbon and Glass- applications.

UNIT III - PHASE EQUILIBRIA, LUBRICANTS AND ADHESIVES (9 hours)

Phase rule: Statement - explanation of the terms involved - one component system (water system only). Condensed phase rule - thermal analysis - two component systems: simple eutectic, Pb-Ag; compound formation, Zn-Mg. Lubricants: Classification –solid, semi solid, liquid, emulsion- properties – selection of lubricants for different purposes, Adhesives: classification-natural, synthetic, inorganic- Adhesive action - applications.

UNIT IV - CORROSION AND ITS CONTROL (9 hours)

Corrosion: Basic concepts - mechanism of chemical, electrochemical corrosion - Pilling Bedworth rule – Types of Electrochemical corrosion - galvanic corrosion - differential aeration corrosion - pitting corrosion - stress corrosion – Measurement of corrosion (wt. loss method only) - factors influencing corrosion. Corrosion control: Cathodic protection - sacrificial anodic method - corrosion inhibitors. Protective coatings: surface preparation for metallic coatings - electro plating (copper plating) and electroless plating (Nickel plating) - chemical conversion coatings - anodizing, phosphating & chromate coating.

UNIT V - INSTRUMENTAL METHODS OF ANALYSIS (9 hours)

Basic principles, instrumentation and applications of potentiometry, UV - visible spectroscopy, infrared spectroscopy, atomic absorption spectroscopy and flame photometry.

			X		X	X		X	X	X	
Mapping of instructional objectives with student outcome			5		2	4		1,3	3	2, 5	
List of Topics Covered											
UNIT I - ENVIRONMENTAL EDUCATION AND ECOSYSTEMS (6 hours)											
Environmental education: Definition and objective. Structure and function of an ecosystem – ecological succession – primary and secondary succession - ecological pyramids – pyramid of number, pyramid of energy and pyramid of											

biomass.

UNIT II - ENVIRONMENTAL POLLUTION (6 hours)

Environmental segments – structure and composition of atmosphere - Pollution – Air, water, soil , thermal and radiation – Effects – acid rain, ozone layer depletion and green house effect – control measures – determination of BOD, COD, TDS and trace metals.

UNIT III - WASTE MANAGEMENT (6 hours)

Waste water treatment (general) – primary, secondary and tertiary stages.

Solid waste management: sources and effects of municipal waste, bio medical waste - process of waste management.

UNIT IV - BIODIVERSITY AND ITS CONSERVATION (6 hours)

Introduction: definition - genetic, species and ecosystem diversity – bio diversity hot spots - values of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values - threats to biodiversity: habitat loss, poaching of wildlife – endangered and endemic species of India, Conservation of biodiversity: in-situ and ex-situ conservations.

UNIT V - ENVIRONMENTAL PROTECTION (6 hours)

National concern for environment: Important environmental protection acts in India – water, air (prevention and control of pollution) act, wild life conservation and forest act – functions of central and state pollution control boards - international effort – key initiatives of Rio declaration, Vienna convention, Kyoto protocol and Johannesburg summit.

NATIONAL CADET CORPS (NCC)

Any student enrolling as a member of National Cadet Core (NCC) will have to attend sixteen parades out of twenty parades each of four periods over a span of academic year.

Attending eight parades in first semester will qualify a student to earn the credits specified in the curriculum. Grading shall be done based on punctuality, regularity in attending the parades and the extent of active involvement.

NATIONAL SERVICE SCHEME (NSS)

A student enrolling as member of NSS will have to complete 60 hours of training / social service to be eligible to earn the credits specified in the curriculum.

Grading shall be done by the faculty member handling the course based on punctuality, regularity in attending the classes and the extent of active involvement.

NATIONAL SPORTS ORGANIZATION (NSO)

Each student must select one of the following games/sports events and practice for one hour per week. An attendance of 75% is compulsory to earn the credits specified in the curriculum. Grading shall be done by the faculty member handling the course based on punctuality, regularity in attending the classes and the extent of active involvement.

List of games/sports:

Basket Ball, Football, Volley Ball, Ball Badminton, Cricket, Throw-ball, Track events

Field events or any other game with the approval of faculty member.

YOGA

Benefits of Agnai Meditation -Meditation - Agnai, Asanas, Kiriyas, Bandas, Muthras

Benefits of santhi Meditation - Meditation Santhi Physical Exercises (I & II)

Lecture & Practice - Kayakalpa Yoga Asanas, Kiriyas, Bandas, Muthras

Analysis of Thought - Meditation Santhi Physical Exercises III & IV

Benefits of Thuriyam - Meditation Thuriyam Kayakalpa Asanas, Kiriyas, Bandas, Muthras

Attitude - Meditation Thuriyam Kayakalpa Asanas, Kiriyas, Bandas, Muthras

Importance of Arutkappy & Blessings - Meditation Thuriyam Kayakalpa Asanas, Kiriyas, Bandas, Muthras

Benefits of Blessings - Meditation Santhi Kayakalpa Asanas, Kiriyas, Bandas, Muthras

Assessment

An attendance of 75% is compulsory to earn the credits specified in the curriculum. Grading shall be done by the faculty member handling the course based on punctuality, regularity in attending the classes and the extent of active involvement

				X		X	X		X		
Mapping of instructional objectives with student outcome				1		2	3		4		
List of Topics Covered											
UNIT I - INTERPERSONAL SKILLS (6 hours) Understanding the relationship between Leadership Networking & Team work, Realizing Ones Skills in Leadership, Networking & Team Work, and Assessing Interpersonal Skills Situation description of Interpersonal Skill. Team Work											

Necessity of Team Work Personally, Socially and Educationally

UNIT II – LEADERSHIP (4 hours)

Skills for a good Leader, Assessment of Leadership Skills

Change Management

Exploring Challenges, Risking Comfort Zone, Managing Change

UNIT III - STRESS MANAGEMENT (6 hours)

Causes of Stress and its impact, how to manage & distress, Understanding the circle of control, Stress Busters.

Emotional Intelligence

What is Emotional Intelligence, emotional quotient why Emotional Intelligence matters, Emotion Scales. Managing Emotions.

UNIT IV - CONFLICT RESOLUTION (4 hours)

Conflicts in Human Relations – Reasons Case Studies, Approaches to conflict resolution.

UNIT V - DECISION MAKING (10 hours)

Importance and necessity of Decision Making, process of Decision Making, Practical way of Decision Making, Weighing Positives & Negatives.

ENGINEERING TOPICS - I

General Engineering Courses and others

2013 Curriculum Course Code	Name of the Course
CE1001	Basic Civil Engineering
ME1001	Basic Mechanical Engineering
ME1005	Engineering Graphics
EC1001	Basic Electronics Engineering
EC1002	Electronics Engineering Practice
EE1001	Basic Electrical Engineering
CY1003	Electrical Engineering Practice

Course Number and Title											
CE1001 BASIC CIVIL ENGINEERING											
Credits / Contact Hours											
2 / 30											
Instructor Name											
Mrs.A.Vijaya											
Textbooks, References											
<ul style="list-style-type: none"> • Raju K.V.B, Ravichandran P.T, “Basics of Civil Engineering”, Ayyappa Publications, Chennai, 2012. • Rangwala S.C, “Engineering Materials”, Charotar Publishing House, Anand, 2012. • Ramesh Babu, “Civil Engineering”, VRB Publishers, Chennai, 2000. • National Building Code of India, Part V, “Building Material”s, 2005 • Surendra Singh, “Building Material”s, Vikas Publishing Company, New Delhi, 1996. 											
Purpose											
To get exposed to the glimpses of Civil Engineering topics that is essential for an Engineer.											
Prerequisites						Co-requisites					
Nil						Nil					
Required, Elective or Selected Elective (as per Table 5.1a)											
Required											
Instructional Objectives											
<ol style="list-style-type: none"> 1. To know about different materials and their properties 2. To know about engineering aspects related to buildings 3. To know about importance of surveying and the transportation systems 4. To get exposed to the rudiments of engineering related to dams, water supply, and sewage disposal. 											
Student Outcomes from Criterion 3 covered by this Course											
Student outcome	a	b	c	d	e	f	g	h	i	j	k
	X				X						X
Mapping of instructional objectives with student outcome	1 - 4				1-4						2-4
List of Topics Covered											
<p>UNIT I - BUILDING MATERIALS (6 hours) Introduction – Civil Engineering – Materials: Bricks – composition – classifications – properties –uses. Stone – classification of rocks – quarrying – dressing –properties –uses. Timber - properties –uses –ply wood. Cement – grades –types – properties –uses. Steel – types – mild steel – medium steel – hard steel – properties – uses – market forms. Concrete – grade designation – properties – uses.</p> <p>UNIT II - MATERIAL PROPERTIES (6 hours) Stress – strain – types – Hook’s law – three moduli of elasticity – poissons ratio – relationship – factor of safety. Centroid - center of gravity – problems in symmetrical sections only (I, T and channel sections). Moment of inertia, parallel, perpendicular axis theorems and radius of gyration (definitions only).</p> <p>UNIT III - BUILDING COMPONENTS (6 hours)</p>											

Building – selection of site – classification – components. Foundations –functions – classifications – bearing capacity. Flooring – requirements – selection – types – cement concrete marble – terrazzo floorings. Roof – types and requirements.

UNIT IV - SURVEYING AND TRANSPORTATION (6 hours)

Surveying – objectives – classification – principles of survey. Transportation – classification – cross section and components of road – classification of roads. Railway – cross section and components of permanent way –functions. Water way – docks and harbor – classifications – components. Bridge – components of bridge.

UNIT V - WATER SUPPLY AND SEWAGE DISPOSAL (6 hours)

Dams – purpose – selection of site – types –gravity dam (cross section only). Water supply – objective – quantity of water – sources – standards of drinking water – distribution system. Sewage – classification – technical terms – septic tank – components and functions.

4. Rajput R.K, “Basic Electrical and Electronics Engineering”, Laxmi Publications, First Edition, 2007.

Purpose

This course provides comprehensive idea about working principle, operation and characteristics of electronic devices, transducers, Digital Electronics and Communication Systems.

Prerequisites

Nil

Co-requisites

Nil

Required, Elective or Selected Elective (as per Table 5.1a)

Required

Instructional Objectives

- At the end of the course students will be able to gain knowledge about the
1. Fundamentals of electronic components, devices, transducers
 2. Principles of digital electronics
 3. Principles of various communication systems

Student Outcomes from Criterion 3 covered by this Course

Student outcome	a	b	c	d	e	f	g	h	i	j	k
	X				X						
Mapping of instructional objectives with student outcome	1, 3				2,3						

List of Topics Covered

UNIT I - ELECTRONIC COMPONENTS (4 hours)

Passive components – resistors, capacitors & inductors (properties, common types, I-V relationship and uses).

UNIT II - SEMICONDUCTOR DEVICES (7 hours)

Semiconductor Devices - Overview of Semiconductors - basic principle, operation and characteristics of PN diode, Zener diode, BJT, JFET, optoelectronic devices (LDR, photodiode, phototransistor, solar cell, optocouplers)

UNIT III – TRANSDUCERS (5 hours)

Transducers - Instrumentation – general aspects, classification of transducers, basic requirements of transducers, passive transducers - strain gauge, thermistor, Hall-Effect transducer, LVDT, and active transducers – piezoelectric and thermocouple.

UNIT IV - DIGITAL ELECTRONICS (7 hours)

Number systems – binary codes - logic gates - Boolean algebra, laws & theorems - simplification of Boolean expression - implementation of Boolean expressions using logic gates - standard forms of Boolean expression.

UNIT V - COMMUNICATION SYSTEMS (7 hours)

Block diagram of a basic communication system – frequency spectrum - need for modulation - methods of modulation - principles of AM, FM, pulse analog and pulse digital modulation – AM / FM transmitters & receivers (block diagram description only)

List of Topics Covered											
UNIT I - BASIC CIRCUIT CONCEPTS & LAWS (9 hours)											
Classification of Circuit Elements – Node, Loop, Path & Branch – Incidence Matrix – Network topology - Analysis of Incidence Matrix- Tie Set & Cut Set – Kirchoff's Laws – Series and Parallel – Voltage and Current division rule. Introduction to AC Analysis – Complex Impedance – Analysis: Mesh – Supermesh – Nodal – Supernodal.											

UNIT II - NETWORK THEOREMS: (Both DC & AC Circuit Analysis (9 hours))

Source Transformation Theorem - Super Position Principle - Thevenin's & Norton's Theorem - Reciprocity Theorem - Compensation Theorem - Millman's Theorem - Maximum Power Transfer theorem - Star - Delta Theorem.

UNIT III - RESONANCE & COUPLED CIRCUITS (9 hours)

Resonance: Introduction – series resonance – parallel resonance – Definition: Q Factor- Half power frequency resonant frequency – Bandwidth.

Coupled Circuits: Mutual inductance – Co-efficient of Coupling – Dot Convention – Energy Consideration – Analysis of Coupled Circuits.

UNIT IV - TRANSIENT ANALYSIS (9 hours)

Basics - Source free and Forced Response of RL, RC and RLC Series Circuits – Forced Response of RL, RC & RLC Series circuits with Sinusoidal Excitation - Time Constant & Natural frequency of Oscillation - Laplace Transform Application to the Solution of RL, RC & RLC Transient Circuits.

UNIT V - TUNED CIRCUITS & PSPICE (9 hours)

Tuned Circuits – Single Tuned Circuits – Double Tuned Circuits – Analysis

PSPICE (Elementary treatment only) – DC Analysis and Control Statements - AC Analysis and Control Statements – Transient analysis.

Course Number and Title	
EC1004 ELECTRIC CIRCUITS LAB	
Credits / Contact Hours	
1 / 30	
Instructor Name	
Mrs.A. Anilet Bala	
Textbooks, References	
<ul style="list-style-type: none"> • LAB MANUAL, Department of ECE, SRM University. • David A Bell, “Laboratory Manual for Electric Circuits”, 6th Edition, PHI. • Muhammed H Rashid, “SPICE for Circuits and Electronics using PSPICE”, 2nd Edition, PHI, 1995. • Maheswari.L.K and Anand.M.M.S, “Laboratory Manual for Introductory Electronic Experiments”, New Age, 2010. 	
Purpose	
To inculcate strong practical skills on the fundamental theorems and transient circuit analysis.	
Prerequisites	Co-requisites
Nil	EC1003
Required, Elective or Selected Elective (as per Table 5.1a)	
Required	
Instructional Objectives	
<ol style="list-style-type: none"> 1. Provide hands-on experience to the students so that they are able to put theoretical concepts to practice. 2. Use computer simulation tools such as PSPICE, or Multisim to carry out design experiments as it is a key 	

- analysis tool of engineering design.
3. Give a specific design problem to the students, which after completion they will verify using the simulation software or hardwired implementation.
 4. Understand the concept of circuit laws
 5. Solve the electrical network using mesh and nodal analysis by applying network theorems
 6. Understand the concept of resonance in series and parallel circuits
 7. Analyze the transient response of series and parallel A.C. circuits and to solve problems in time domain using Laplace Transform.

Student Outcomes from Criterion 3 covered by this Course

Student outcome	a	b	c	d	e	f	g	h	i	j	k
			X	X		X					X
Mapping of instructional objectives with student outcome			1, 3, 4, 5, 6, 7	1-3		2, 3					1-7

List of Topics Covered

- LIST OF EXPERIMENTS**
1. Verification of Kirchoff’s voltage and Current Laws
 2. Verification of Superposition Theorem
 3. Verification of Thevenin’s Theorem & Norton’s Theorem
 4. Verification of Maximum Power Transfer Theorem
 5. Verification of Tellegen’s and Reciprocity Theorem
 6. Time domain response of RL Transient Circuit.
 7. Time domain response of RC Transient Circuit.
 8. Series RLC Resonance Circuits (Frequency response& Resonant frequency)
 9. Parallel RLC Resonance Circuits (Frequency response & Resonant frequency)
 10. Simulation experiments using PSPICE or MultiSim

EC1005 ELECTROMAGNETIC THEORY AND WAVEGUIDES	
Credits / Contact Hours	
3 / 45	
Instructor Name	
Mrs. M. Neelaveni Ammal	
Textbooks, References

Purpose	
To enable the students understand the universal theoretical concepts in three dimensional real world and find solution to problems related to electromagnetic wave propagation.	
Prerequisites	Co-Requisites

MA1001 & MA1002					Nil							
Required, Elective or Selected Elective (as per Table 5.1a)												
Required												
Instructional Objectives												
<p>1. To impart knowledge on the basic concepts of electric and magnetic fields.</p> <p>2. To educate scientifically about Maxwell's equations and Poynting theorem</p> <p>3. To interpret the Wave propagation in between parallel plates.</p> <p>4. To emphasize the significance of different types of waveguides.</p>												
Student Outcomes from Criterion 3 covered by this Course												
Student outcome	a	b	c	d	e	f	g	h	i	j	k	
	X				X							
Mapping of instructional objectives with student outcome	1-4				1-4							
List of Topics Covered												
<p>UNIT I - STATIC ELECTRIC FIELDS (11 hours) Introduction to co-ordinate system – Rectangular Cylindrical and Spherical – The experimental law of Coulomb. Electric Field Intensity – field of line charge, sheet charge, continuous volume charge distribution – Streamline and sketches of fields - Electric flux density – Gauss Law – Applications of Gauss Law - Some symmetrical charge distributions – Differential volume element – Concept of divergence. Definition of Electric potential, work, Energy potential difference – Potential field of different types of charges – Potential gradient – The dipole and field due to a dipole. Energy density in the electric field.</p> <p>UNIT II - STEADY MAGNETIC FIELDS (9 hours) Biot Savart Law – Applications of Biot Savart Law - Ampere's circuital law - Applications circuital law – Curl – Stoke's Theorem - Magnetic flux and magnetic flux density – The scalar and vector magnetic potentials – Derivation of the steady magnetic field laws.</p> <p>UNIT III - TIME VARYING FIELDS AND MAXWELLS EQUATIONS (7 hours) Faraday's law – Displacement current – Maxwell's equations in point form and integral form for steady fields and time varying fields – Retarded potentials - Comparison of field and circuit theory - Poynting vector and Poynting Theorem.</p> <p>UNIT IV - GUIDED WAVES (9 hours) Waves between parallel planes: Transverse electric waves-Transverse magnetic waves-Characteristic of TE and TM waves-TEM waves. Velocity of propagation-Attenuation in parallel plane guides-Wave impedance</p> <p>UNIT V - WAVEGUIDE THEORY (9 hours) Rectangular wave guides: TE waves and TM waves in Rectangular waveguides – Dominant mode – cutoff frequency in wave guides – Impossibility of TEM waves in waveguides. Circular waveguides: Wave impedance and characteristic impedance – Power flow in wave guides – Attenuation factor and Q of wave guides – Transmission line analogy for waveguides</p>

EC1006 ELECTRON DEVICES											
Credits / Contact Hours											
3 / 45											
Instructor Name											
Mrs. E. Chitra											
Textbooks, References											
<ul style="list-style-type: none"> • Robert L. Boylestad and Louis Nashelsky, “Electronic Devices and Circuit Theory”, Pearson Education, 9th Edition, 2009. • Somanathan Nair B, “Electronic Devices and Applications”, PHI, 2006. • Jacob Millman, Christos C Halkias, Satyabrata Jit, “Electron Devices and Circuits”, Tata McGraw Hill, 2010. • David A Bell, “Fundamentals of Electronic Devices and Circuits”, Oxford Press, 2009. • Theraja.B.L, Sedha.R.S, “Principles of Electronic Devices and Circuits”, Chand. S, 2004. 											
Purpose											
The purpose of this course is to provide a basis for understanding the characteristics, operation and limitations of semiconductor and optoelectronic devices. This course brings together the semiconductor device physics, optoelectronic device principles and complete description of power supply circuit.											
Prerequisites						Co-requisites					
EC1001						Nil					
Required, Elective or Selected Elective (as per Table 5.1a)											
Required											
Instructional Objectives											
<ol style="list-style-type: none"> 1. To understand the physical construction, working and operational characteristics of Semiconductor devices. 2. To understand the operation of power supply circuits built using filters, rectifiers and voltage regulators. 3. To discuss the manufacturing process of monolithic ICs & the fabrication of components on monolithic IC. 											
Student Outcomes from Criterion 3 covered by this Course											
Student outcome	a	b	c	d	e	f	g	h	i	j	k
	X	X	X								
Mapping of instructional objectives with student outcome	1,2,3	1,2	1,2								
List of Topics Covered											
UNIT I - SEMICONDUCTOR DIODES AND SPECIAL PURPOSE DIODES (12 hours)											
Overview on Physics and Properties of Semiconductors: Intrinsic semiconductor – extrinsic semiconductor – Fermi level in an intrinsic semiconductor – conductivity of a metal, intrinsic semiconductor and extrinsic semiconductor – drift – diffusion – recombination – carrier life time.											
Semiconductor diodes : Formation of PN junction – working principle – VI characteristics – PN diode currents – diode current equation – diode resistance – transition and diffusion capacitance – diode models – voltage breakdown in diodes.											
Special purpose diodes : Zener diode – Point-contact diode – Backward diode – Varactor diode – Step-recovery											

diode – Schottky diode, PNP diode – RF diode.

UNIT II - BIPOLAR TRANSISTORS (6 hours)

Bipolar Transistors: Construction – working – transistor currents – transistor configurations and input-output characteristics – Early effect (base-width modulation) – Ebers Moll model – transistor as an amplifier – Transistor as a switch.

UNIT III - FIELD-EFFECT TRANSISTORS (6 hours)

Field-Effect Transistors : construction, working and VI characteristics of JFET – comparison of BJT and JFET – MOSFET – enhancement MOSFET, depletion MOSFET, their working principle and VI characteristics, comparison of MOSFET with JFET, comparison of D MOSFET with E MOSFET, CMOS, MESFET, CCD.

UNIT IV - DC POWER SUPPLIES (12 hours)

Rectifiers and Filters : Block schematic of a typical DC power supply, single phase HWR, FWR, full-wave bridge rectifier, power supply filters (ripple factor and efficiency analysis), bleeder resistor, voltage dividers.

Voltage regulators: voltage regulation, Zener diode shunt regulator, transistor series regulator, transistor shunt regulator, switching regulators, design of complete DC power supply circuit.

UNIT V - INTEGRATED CIRCUIT FABRICATION (9 hours)

Integrated circuit – advantages and drawback of ICs – scale of integration – classification of ICs – definition of linear IC and digital IC with examples – manufacturing process of monolithic ICs – fabrication of components (diode, capacitor, bipolar transistor, resistor and field – effect transistor) on monolithic IC – comparison of MOS ICs and bipolar ICs.

Course Number and Title	
EC1007 DIGITAL SYSTEMS	
Credits / Contact Hours	
3 / 45	
Instructor Name	
Mrs. P. Radhika	
Textbooks, References	
<ul style="list-style-type: none"> • Morris Mano M, Michael D. Ciletti, “Digital Design”, Pearson Education, 4th Edition, 2007. • Charles H Roth (Jr), Larry L. Kinney, “Fundamentals of Logic Design”, Cengage Learning India Edition, 5th Edition, 2010. • Floyd and Jain, “Digital Fundamentals”, Pearson Education, 8th Edition, 2007. • Ronald J. Tocci, “Digital Systems: Principles and Applications”, Pearson Education, 10th Edition, 2009. • Donald P Leach, Albert Paul Malvino, Goutam Saha, “Digital Principles and Applications”, Tata McGraw Hill, 6th Edition, 2008. 	
Purpose	
The purpose of this course is to develop a strong foundation in analysis and design of digital electronics.	
Prerequisites	Co-requisites
EC1001	Nil
Required, Elective or Selected Elective (as per Table 5.1a)	

Required											
Instructional Objectives											
At the end of the course students should be able to											
<ol style="list-style-type: none"> 1. Understand concepts of combinational and sequential circuits. 2. Analyze the synchronous and asynchronous logic circuits. 3. Understand concepts of memory, programmable logic and digital integrated circuits. 4. Design Combinational and sequential systems. 											
Student Outcomes from Criterion 3 covered by this Course											
Student outcome	a	b	c	d	e	f	g	h	i	j	k
	X	X	X								
Mapping of instructional objectives with student outcome	1,2,4	1- 4	1- 4								
List of Topics Covered											
<p>UNIT I-BASIC CONCEPTS, BOOLEAN ALGEBRA, THEOREMS AND FUNCTIONS (10 hours) Number Systems: Decimal number system, binary number system, octal number system , hexadecimal number system, BCD number system, Excess-3 code, Gray code, Alpha numeric code, error detecting and error correcting codes. Arithmetic: Arithmetic number representation, Binary arithmetic, Hexadecimal arithmetic, BCD arithmetic. Boolean Algebra and Theorems: Logic gates and logic operations, Boolean theorems and postulates, SOP's & POS's, Minterms and Maxterms. Minimization of Boolean Functions: Algebraic simplification, Karnaugh map simplification, Quine-Mc Cluskey or Tabulation method.</p> <p>UNIT II-LOGIC GATES (9 hours) Logic Families: Metal Oxide Semiconductor logic families- switching properties of NMOS and PMOS transistors, static NMOS, dynamic NMOS, Static CMOS and dynamic CMOS logic families, CMOS Transmission gate circuits, Bipolar logic families- switching properties of NPN and PNP transistors, TTL, Schottkey TTL, Comparison of MOS logic circuits(CMOS) with that of a TTL digital circuit, Tristate gates. Electrical characteristics: Meanings of speed, propagation delay, operating frequency, and power dissipated per gate, supply voltage levels, operational voltage levels of various logic families.</p> <p>UNIT III-COMBINATIONAL SYSTEMS (9 hours) Binary arithmetic units (Adder, Subtractor, n-bit parallel adder & Subtractor, look ahead carry generator), decoder, encoder, multiplexer, Demultiplexer, code converters, Magnitude comparators, parity generators. Implementation of combinational logic by standard IC's.</p> <p>UNIT IV-SEQUENTIAL SYSTEMS (10 hours) Flip-flop and Latch: SR latch, JK flip-flop, T flip-flop, D flip-flop and latch, Master-slave RS flip-flop, Master-slave JK flip-flop, asynchronous inputs. Registers & Counters: Shift registers (SISO, SIPO, PISO, PIPO), universal shift register. Counters- Asynchronous/Ripple counters, Synchronous counters, Modulus-n Counter, Ring counter, Johnson counter, Up-Down counter, asynchronous clear, preset and load in a counter, synchronous clear, preset and load in a counter, typical IC's for counters. Synchronous (Clocked) sequential circuits: Moore and Mealey state machine circuits, Analysis & design of synchronous sequential circuits – State machine design with SM charts.</p> <p>UNIT V-MEMORY AND PROGRAMMABLE LOGIC (7 hours) RAM, memory decoding, ROM, PROMs, PAL & PLA, Sequential Programmable Devices (discuss three major devices without going into their detailed construction).</p>

Ronald Fannin, “Signals and Systems – continuous and Discrete”, Pearson Education, 4th Edition, 2009. • Douglas K Linder, “Introduction to Signals and Systems”, Mc-Graw Hill, 1st Edition, 1999. 											
Purpose											
The purpose of this course is to introduce students to the fundamentals of signals and systems which are basic to Digital Signal Processing. The main objective of this subject is to help the students to mathematically analyze different types of signals and their associated systems											
Prerequisites						Co-requisites					
MA1002						MA1003					
Required, Elective or Selected Elective (as per Table 5.1a)											
Required											
Instructional Objectives											
At the end of this course, the students will be able to understand the <ol style="list-style-type: none"> 1. Various classifications of both Continuous time and Discrete time Signals and Systems. 2. Spectral analysis of Periodic and Aperiodic Signals using Fourier series. 3. Analysis and characterization of the CT system through Laplace transform and Fourier transform 4. Analysis and characterization of the DT system through classical method. 5. Analysis and characterization of the DT system through Z transform. 											
Student Outcomes from Criterion 3 covered by this Course											
Student outcome	a	b	c	d	e	f	g	h	i	j	k
	X	X	X								
Mapping of instructional objectives with student outcome	1-5	1-5	3,5								
List of Topics Covered											
UNIT I-CLASSIFICATION OF SIGNALS AND SYSTEMS (9 hours)											
Classification of Signals: Continuous time signals - Discrete time signals – Periodic and Aperiodic signals – Even and odd signals – Energy and power signals –Deterministic and random signals –Complex exponential and											

Sinusoidal signals .Unit step, Unit ramp, Unit impulse – Representation of signals in terms of unit impulse .
Classification of Systems: Continuous time systems- Discrete time systems - Linear system – Time Invariant system – causal system – BIBO system – Systems with and without memory – LTI system.

UNIT II-ANALYSIS OF CONTINUOUS TIME SIGNALS (9 hours)

Fourier series: Representation of Continuous time Periodic signals –Trigonometric and exponential-Symmetry conditions- Properties of Continuous time Fourier series – Parseval’s relation for power signals –Frequency spectrum.

Fourier transform: Representation of Continuous time signals- Properties of Continuous time Fourier transform – Parseval’s relation for energy signals –Frequency spectrum –Analysis of LTI system using Fourier methods.

UNIT III-LTI CONTINUOUS TIME SYSTEM (9 hours)

System modeling: Solution of Differential equation with initial conditions-Zero state response and Zero input response– impulse response – Frequency response – Convolution – Analysis and characterization of LTI system using Laplace transform.

UNIT IV-ANALYSIS OF DISCRETE TIME SIGNALS AND SYSTEMS (9 hours)

Representation of sequences – Discrete Time Fourier Transform (DTFT) - Discrete Fourier Transform (DFT) and its properties – Solution of linear constant coefficient difference equations with initial conditions-Zero state response and Zero input response– impulse response – Convolution sum -Frequency response.

UNIT V-LTI DT SYSTEM CHARACTERIZATION AND REALIZATION(9 hours)

Unilateral and Bilateral Z transforms and its properties - Inverse Z transform: Power series expansion and Partial fraction methods - Analysis and characterization of DT system using Z transform-Realization of structures for DT systems -Direct form-I- Direct form II--Parallel-Cascade forms

Tutorial - (15 hours)

	X		X		X						
Mapping of instructional objectives with student outcome	1- 4		3,4		1-4						
List of Topics Covered											

UNIT I-TRANSMISSION LINE THEORY (9 hours)

General theory of Transmission lines - the transmission line – general solution – The infinite line – Wavelength, velocity of propagation – Waveform distortion – the distortion less line - Loading and different methods of loading – Line not terminated in Z_0 – Reflection coefficient – calculation of current , voltage, power delivered and efficiency of transmission – Input and transfer impedance - Open and short circuited lines – reflection factor and reflection loss.

UNIT II-HIGH FREQUENCY TRANSMISSION LINES (8 hours)

Transmission line equations at radio frequencies – Line of Zero dissipation – Voltage and current on the dissipation less line, Standing Waves, Nodes , Standing Wave Ratio – Input impedance of the dissipation less line - Open and short circuited lines – Power and impedance measurement on lines – Reflection losses – Measurement of VSWR and wavelength.

UNIT III-IMPEDANCE MATCHING IN HIGH FREQUENCY LINES (9 hours)

Impedance matching: Quarter wave transformer – Impedance matching by stubs – Single stub and double stub matching – Smith chart – Solutions of problems using Smith chart – Single and double stub matching using Smith chart.

UNIT IV-PASSIVE FILTERS (9 hours)

Characteristic impedance of symmetrical networks – filter fundamentals. Design of filters: Constant K, Low Pass, High Pass, Band Pass, Band Elimination, m-derived sections and composite.

UNIT V-ATTENUATORS AND EQUALIZERS (10 hours)

Attenuators: T, π , Lattice Attenuators, Bridged – T attenuator, L-Type Attenuator. Equalizers: inverse network, series, full series, shunt, full shunt, constant resistance T, constant resistance π , constant resistance lattice and bridged T network.

List of Topics Covered											
<p>UNIT I-OPERATIONAL AMPLIFIER CHARACTERISTICS (9 hours) Op-amp symbol, terminals, packages and specifications - Block diagram Representation of op-amp- Ideal op-amp & practical op-amp - Open loop & closed loop configurations – DC & AC performance characteristics of op-amp – Frequency compensation - Noise – Differential amplifiers – General Description, Manufacturer’s Specification, Electrical Characteristics and internal schematic of 741 op-amps.</p> <p>UNIT II-OP-AMP APPLICATIONS (9 hours) Basic op-amp circuits: Inverting & Non-inverting voltage amplifiers - Voltage follower - Summing, scaling &</p>											

averaging amplifiers - AC amplifiers.

Linear Applications: Instrumentation Amplifiers-V-to-I and I-to-V converters-Differentiators and Integrators.

Non-linear Applications: Precision Rectifiers – Wave Shaping Circuits (Clipper and Clampers) – Log and Antilog Amplifiers – Analog voltage multiplier circuit and its applications – Operational Trans-Conductance Amplifier (OTA) - Comparators and its applications – Sample and Hold circuit.

UNIT III-WAVEFORM GENERATORS AND PLL (9 hours)

Waveform Generators: Sine-wave Generators – Square / Triangle / Saw-tooth Wave generators.

IC 555 Timer: Monostable operation and its applications – Astable operation and its applications.

PLL: Operation of the Basic PLL-Closed loop analysis of PLL-Voltage Controlled Oscillator-PLL applications.

UNIT IV-ACTIVE FILTERS & VOLTAGE REGULATOR (9 hours)

Filters: Comparison between Passive and Active Networks-Active Network Design – Filter Approximations-Design of LPF, HPF, BPF and Band Reject Filters – State Variable Filters – All Pass Filters – Switched Capacitor Filters.

Voltage Regulators: Basics of Voltage Regulator – Linear Voltage Regulators using Op-amp – IC Regulators (78xx, 79xx, LM 317, LM 337, 723)-Switching Regulators.

UNIT V-DATA CONVERSION DEVICES (9 hours)

Digital to Analog Conversion: DAC Specifications – DAC circuits – Weighted Resistor DAC-R-2R Ladder DAC-Inverted R-2R Ladder DAC-Monolithic DAC

Analog to Digital conversion: ADC specifications-ADC circuits-Ramp Type ADC-Successive Approximation ADC-Dual Slope ADC-Flash Type ADC- Monolithic ADC.

Purpose

The purpose of this course is to teach students the fundamentals of microprocessor and microcontroller systems. The student will be able to incorporate these concepts into their electronic designs for other courses where control can be achieved via a Microprocessor/microcontroller implementation.

Prerequisites

EC1012 & EC1007

Co-requisites

Nil

Required, Elective or Selected Elective (as per Table 5.1a)

Required

Instructional Objectives

Through the use of assembly language, by the end of the course students will become thoroughly familiar with the elements of microprocessor software and hardware. They will be able to:

1. Understand fundamental operating concepts behind microprocessors and microcontrollers.
2. Appreciate the advantages in using RISC microprocessors / microcontrollers in engineering applications.
3. Design microprocessor based solutions to problems.
4. Understand Low-Level and Embedded C Programming.
5. Apply this knowledge to more advanced structures.

Student Outcomes from Criterion 3 covered by this Course

Student outcome	a	b	c	d	e	f	g	h	i	j	k
	X	X	X			X			X	X	X
Mapping of instructional objectives with student outcome	1,3,4	1,3,4	1-4	1-4		4,5			5	5	5

List of Topics Covered

UNIT I-MICROPROCESSOR- 8086 (9 hours)

Register Organization -Architecture-Signals-Memory Organization-Bus Operation- I/O Addressing-Minimum Mode-Maximum Mode-Timing Diagram-Interrupts - Service Routines – I/O and Memory Interfacing concepts.

UNIT II-RISC ARCHITECTURE AND PROGRAMMING (12 hours)

Addressing Modes-Instruction format-Instruction set-Assembly language programs in 8086. RISC architecture –The ARM Cortex M0 (nuvoTon- Nu-LB-LUC140)architecture - ARM organization and implementation – Introduction to ARM Programming Register –Nested Vector Interrupt Configuration and Instruction Set - The thumb instruction set - Basic ARM ALP (32-bit arithmetic operations, sorting technique, sum of series).

UNIT III-INTERFACING DEVICES (7 hours)

Programmable Peripheral Interface (8255) - Programmable Interval Timer (8254)- Programmable Interrupt Controller (8259A) - Programmable DMA Controller (8257) - Programmable Communication Interface (8251A) – Programmable Keyboard and Display Controller (8279).

UNIT IV-MICROCONTROLLER-8051 (7 hours)

Register Set-Architecture of 8051 microcontroller- I/O and memory addressing- Interrupts-Instruction set-Addressing modes.

UNIT V- INTERFACING OF 8051 USING EMBEDDED C PROGRAMMING (10 hours)

Timer-Serial Communication-Interrupts Programming-Interfacing to External Memory- Introduction to Embedded C Programming -Basic techniques for reading & writing from I/O port pins. Interfacing 8051 to ADC, LCD, Keyboard and stepper motor using Embedded C.

	X	X	X		X						X
Mapping of instructional objectives with student outcome	1	2,4	2		1,2						2
List of Topics Covered											
UNIT I-REVIEW OF DISCRETE TIME SIGNALS AND SYSTEMS (9 hours)											
Overview of signals and systems – DFT–FFT using DIT and DIF algorithms – Inverse DFT-FFT using DIT and DIF algorithms – Applications – Circular convolution – MATLAB programs for DFT and FFT.											
UNIT II-DESIGN AND IMPLEMENTATION OF IIR FILTERS (9 hours)											
Design of analog filters using Butterworth and Chebyshev approximations – IIR digital filter design from analog filter using impulse invariance technique and bilinear transformations – MATLAB programs for IIR filters.											

UNIT III-DESIGN AND IMPLEMENTATION OF FIR FILTERS (9 hours)

Linear phase response – Design techniques for FIR filters – Fourier series method and frequency sampling method – Design of Linear phase FIR filters using windows: Rectangular, Hanning and Hamming windows – Matlab programs for FIR filters.

UNIT IV-FINITE WORD LENGTH EFFECTS IN DIGITAL FILTERS (9 hours)

Fixed point arithmetic – effect of quantization of the input data due to Finite word length. Product round off – need for scaling – Zero input limit cycle oscillations - Limit cycle oscillations due to overflow of adders – Table look up implementation to avoid multiplications.

UNIT V-PROCESSOR FUNDAMENTALS (9 hours)

Features of DSP processors – DSP processor packaging (Embodiments) – Fixed point Vs floating point DSP processor data paths – Memory architecture of a DSP processor (Von Neumann – Harvard) – Addressing modes – pipelining – TMS320 family of DSPs (architecture of C5x).

Course Number and Title	
EC1018 COMMUNICATION THEORY	
Credits / Contact Hours	
3/45	
Instructor Name	
Mrs. R. Dayana	
Textbooks, References	
<ul style="list-style-type: none"> • John G. Proakis & Masoud Salehi, “Communication System Engineering”, 2nd Edition, 2002. • Singh.R.P. & Sapre. S.D, “Communication Systems: Analog & Digital”, 3rd Edition, Tata McGraw-Hill, 2012. • Sanjay Sharma, “Communication Systems, Analog & Digital”, S.K. Kataria & Sons, 5th Edition, 2009. • Dennis Reddy & John Coolen, “Electronic Communications”, 4th Edition, Prentice Hall, 2008. 	
Purpose	
<p>The course considers analog communication systems and techniques. In this course we will introduce some of the basic mathematical concepts that will allow us to think in the two “domains” of communications, the time domain and the frequency domain. We will cover the basic types of analog modulation (AM, FM, and PM) from both a mathematical description and from a block-diagram system approach.</p>	
Prerequisites	Co-requisites
Nil	Nil
Required, Elective or Selected Elective (as per Table 5.1a)	
Required	
Instructional Objectives	
<p>The scope of this course is to provide the complete analysis of Analog communications. This knowledge helps them to acquire better application of these principles in Digital communications. The overall objective is to introduce the student to the basics of communication theory. This course emphasizes:</p> <ol style="list-style-type: none"> 1. Analog modulation and demodulation techniques. 2. Acquiring mathematical understanding of Analog Communication Systems. 	

3. Understanding the trade-offs (in terms of bandwidth, power, and complexity requirements)
4. Performance evaluation of communication systems in the presence of noise.
5. Design of practical communication system at the block diagram level under certain constraints and requirements..

Student Outcomes from Criterion 3 covered by this Course

Student outcome	a	b	c	d	e	f	g	h	i	j	k
	X	X			X						
Mapping of instructional objectives with student outcome	1,2,5	1,2,5			1- 4						

List of Topics Covered

UNIT I-AMPLITUDE MODULATION SYSTEMS (10 hours)

Need for modulation, Amplitude Modulation System, Single Tone & Multiple Tone Amplitude Modulation, Power Relation, Generation of Amplitude Modulation – Linear Modulation – Collector Modulation method Non-linear Modulation – Square law Modulator, Product Modulator, Switching Modulator - Demodulation of Amplitude Modulation – Envelope Detector, Coherent Detector, VSB, Performance comparison of various Amplitude Modulation System.

UNIT II-ANGLE MODULATION SYSTEMS (10 hours)

Frequency Modulation, Types of Frequency Modulation, Generation of NBFM, WBFM, Transmission BW of FM Signal, Phase Modulation. Relationship between PM & FM, Comparison, Generation of FM Direct Method, Indirect method, Demodulation of FM - FM Discriminators.

UNIT III-RADIO RECEIVERS (6 hours)

Introduction – Functions & Classification of Radio Receivers, Tuned Radio Frequency (TRF) Receiver, Superheterodyne Receiver – Basic Elements, Receiver Characteristics, Frequency Mixers, AGC Characteristics.

UNIT IV-NOISE THEORY (9 hours)

Noise, Types of noise, White Noise, Addition of Noise due to several sources in series and parallel, Generalized Nyquist Theorem for Thermal Noise, Calculation of Thermal Noise for a Single Noise Source, RC Circuits & Multiple Noise sources. Equivalent Noise Bandwidth, Signal to Noise Ratio, Noise-Figure, Noise Temperature, Calculation of Noise Figure, Noise Figure Determination for Cascaded Stages of Amplifiers.

UNIT V-PERFORMANCE OF COMMUNICATION SYSTEM (10 hours)

Receiver Model, Noise in DSB-SC Receivers, Noise in SSB-SC Receivers, Noise in AM receiver (Using Envelope Detection), Noise in FM Receivers, FM Threshold Effect, Threshold Improvement through Pre-Emphasis and De-Emphasis, Noise in PM system – Comparison of Noise performance in PM and FM, Link budget analysis for radio channels.

5. nuvoton (NUC100/140 series Board Schematics manual, nuvoTon (NUC100/140) series Educational sample codes), www.nuvoton.com

Purpose

This laboratory will provide the students a perfect introduction to the world of Microprocessors and to provide hands-on experience essential to the real understanding of microprocessors architecture and it’s interfacing to the peripheral devices. The experiments are designed to provide the students with the design principles of microprocessor systems and real time programming. The course accomplishes this by using microprocessor kits, simulators and software development systems.

Prerequisites

Nil

Co-requisites

EC1016A

Required, Elective or Selected Elective (as per Table 5.1a)

Required

Instructional Objectives

1. To demonstrate programming proficiency using the various addressing modes and data transfer instructions of the target microprocessor.
2. To apply knowledge of the microprocessor’s internal registers and operations by use of a PC based microprocessor simulator.
3. To interface the processor to external devices.

Student Outcomes from Criterion 3 covered by this Course

Mapping of instructional objectives with student outcome			1-3	1-3	3	1-3				3	

List of Topics Covered

LIST OF EXPERIMENTS

PART-A: GENERAL PURPOSE PROGRAMMING EXERCISES

Minimum six experiments to be conducted.

1. Introduction of Microprocessor and Microcontroller Kit.
2. Addition, Subtraction, Multiplication and Division.
3. Finding the maximum value in an array.
4. Sorting of data.
5. Finding number of positive / negative elements in a block of data.
6. BCD-to-Hex conversion and Hex-to-BCD conversion.
7. Binary-to-ASCII and ASCII-to-Binary conversion.
8. Square Root of a given data.
9. LCM and GCD.

PART-B: INTERFACING WITH APPLICATION BOARDS (8051, ARM Cortex M0 {Nu-LB-NUC140})

Minimum six experiments to be conducted

1. 8255 PPI.
2. Transfer data serially between two kits (Study of 8253/8251).
3. 8279 Keyboard & display using 8051 controller.
4. Seven segment display using nuvoTon (NUC140) board.

5. LCD Display using 8051/ Nu-LB-NUC140 controller.
6. Traffic light using nuvoTon (NUC140) board.
7. 8259 programmable interrupt controller.
8. 8257/8237 DMA controller.
9. 8 bit ADC and 8 bit DAC. using nuvoTon (NUC140) board
10. Stepper motor control using 8051 controller.
11. DC motor speed measurement and control module.
12. Real Time Clock using nuvoTon (NUC140) board.
13. Logic Controller.

Purpose	
To expose basics of Microwave and Optical devices and components. To introduce the students to a few microwave measurements. To expose various optical fiber modes configurations and various signal degradation factors associated with optical fiber and to the design simple optical communication system.	
Prerequisites	Co-requisites
EC1005 & EC1006	Nil

Required, Elective or Selected Elective (as per Table 5.1a)											
Required											
Instructional Objectives											
1. To understand all basic Microwave and Optical devices and components. 2. To learn few microwave measurements and analyze parameters. 3. To understand the principles of fiber-optic communications and the different kind of losses, signal distortion in optical wave guides and other signal degradation factors. 4. To design the optical communication system..											
Student Outcomes from Criterion 3 covered by this Course											
Student outcome	a	b	c	d	e	f	g	h	i	j	k
	X	X	X								
Mapping of instructional objectives with student outcome	1,3	1,2,4	1,3,4								
List of Topics Covered											
<p>UNIT I-MICROWAVE AMPLIFIERS AND OSCILLATORS (9 hours) Introduction to microwave transmission – Application and limitation – Klystron amplifier – Reflex Klystron Oscillator – TWT amplifiers – Magnetron Oscillator – Gunn oscillator.</p> <p>II-MICROWAVE COMPONENTS (9 hours) Directional coupler – E plane Tee, H- plane Tee – Magic Tee – Circulators – Isolators – Attenuators – Phase Shifters – Avalanche breakdown devices, PIN diode and TUNNEL diode. Power, VSWR, Impedance Measurement.</p> <p>UNIT III-INTRODUCTION TO OPTICAL FIBERS AND TRANSMISSION CHARACTERISTICS (9 hours) The propagation of light in optical waveguides – Classification of optical fibers – Numerical aperture, Step index and Graded index fiber – Modes in cylindrical fiber – Linearly polarized modes, Attenuation: Absorption, Scattering, Bending losses. Modal dispersion and chromatic dispersion – Single mode fiber - waveguide dispersion– MFD – PMD.</p> <p>UNIT IV-OPTICAL TRANSMITTERS AND RECEIVERS (9 hours) Optical Sources: - Light source materials – LED homo and hetero structures – surface and edge emitters – Quantum efficiency – Injection Laser Diode – Modes and threshold condition – Structures and Radiation Pattern. Optical detectors: – Physical principles – PIN and APD diodes – Photo detector noise</p> <p>UNIT V-OPTICAL COMMUNICATION SYSTEMS AND DESIGN (9 hours) Transmitter module: Signal formats – Electronic driving circuit – Modulation circuit – external modulators. Amplifier: EDFA, Semiconductor Optical Amplifier. Receiver Module: Optical front end – Quantizer – Decision circuit. Optical Link Design: Point- to- point links – System considerations – Link Power budget – Rise time budget.</p>											

Course Number and Title
EC1023 DIGITAL COMMUNICATION
Credits / Contact Hours
3/45
Instructor Name
Dr.J.Selvakumar

Textbooks, References											
<ul style="list-style-type: none"> • Bernard Sklar, “Digital Communication, Fundamentals and Application”, Pearson Education Asia, 2nd Edition, 2001. • Simon Haykin, “Communication Systems”, John Wiley & Sons, 4th Edition, 2000. • Taub & Schilling, “Principle of Communication Systems”, 2nd Edition, 2003. • John G. Proakis, “Digital Communication”, McGraw Hill Inc, 5th Edition, 2008. • Singh, R.P. & Sapre, S.D, “Communication Systems: Analog & Digital”, Tata McGraw-Hill, 5th reprint, 2000. 											
Purpose											
To provide a comprehensive coverage of digital communication systems. The key feature of digital communication systems is that it deals with discrete messages and to add organization and structure to this field											
Prerequisites						Co-requisites					
EC1018						MA1024					
Required, Elective or Selected Elective (as per Table 5.1a)											
Required											
Instructional Objectives											
<p>To learn and understand</p> <ol style="list-style-type: none"> 1. The process of sampling, quantization and coding that are fundamental to the digital transmission of analog signals and digital modulation systems. 2. Baseband and Passband transmission systems. 3. M-ary signaling and spread spectrum Techniques.. 											
Student Outcomes from Criterion 3 covered by this Course											
Student outcome	a	b	c	d	e	f	g	h	i	j	k
		X	X		X						
Mapping of instructional objectives with student outcome		1-3	1-3		1-3						
List of Topics Covered											
<p>UNIT I-SAMPLING AND QUANTIZATION (9 hours) Sampling Process – Aliasing – Instantaneous sampling – Natural Sampling –Flat Sampling – Quantization of signals – sampling and quantizing effects –channel effects – SNR for quantization pulses – data formatting techniques – Time division multiplexing.</p> <p>UNIT II-DIGITAL MODULATION SYSTEMS (9 hours) PCM Systems – Noise Considerations in PCM system – Overall Signal-to-noise ratio for PCM system – Threshold effect – Channel Capacity – Virtues, Limitations & Modification of PCM system – PCM Signal Multiplexing – Differential PCM – Delta Modulation – Noise Considerations in Delta Modulation – SNR Calculations – Comparison of PCM, DPCM & DM.</p> <p>UNIT III-BASE BAND PULSE TRANSMISSION (9 hours) Maximum likelihood receiver structure – Matched filter receiver – Probability error of the Matched filter – Intersymbol interference – Nyquist criterion for distortion less baseband transmission – Correlative coding – Eye pattern.</p> <p>UNIT IV-PASS BAND DATA TRANSMISSION (9 hours) Pass Band Transmission Model – Generation, Detection, Signal Space Diagram, Probability of Error for BFSK, BPSK, QPSK, DPSK, and Schemes – Comparison.</p> <p>UNITV-M-ARY SIGNALING AND INTRODUCTION TO SPREAD SPECTRUM TECHNIQUES (9</p>											

hours)

M-ary signaling, vectoral view of MPSK and MFSK signaling, symbol error performance of M-ary systems – Introduction – Discrete Sequence Spread Spectrum technique – Use of Spread Spectrum with CDMA-Ranging Using Discrete Sequence Spread Spectrum – Frequency Hopping Spread Spectrum – Generation & Characteristics of PN Sequence.

Course Number and Title											
EC1024 MICROWAVE AND OPTICAL COMMUNICATION LAB											
Credits / Contact Hours											
45/2											
Instructor Name											
Dr. J. Manjula											
Textbooks, References											
<ul style="list-style-type: none">LAB MANUAL, Department of ECE, SRM University											
Purpose											
Microwave communication deals with the study of operation and characteristics of microwave sources and microwave components. It also deals with the measurement of load impedance VSWR, antenna gain and radiation pattern. Optical communication deals with the study of the characteristics of the optical fiber, sources and detectors and setting up of analog and digital fiber links using LED and LASER sources.											
Prerequisites						Co-requisites					
EC1009						EC0122					
Required, Elective or Selected Elective (as per Table 5.1a)											
Required											
Instructional Objectives											
<ol style="list-style-type: none">To familiarize the students with microwave and optical communication techniques/technologiesTo understand the fundamentals of microwave circuit design using ORCAD PSPICE tool, and become familiar with basic microwave measurements.To analyze optical signals and devices in optical communication systems, and learn how to measure and interpret optical signals.											
Student Outcomes from Criterion 3 covered by this Course											
Student outcome	a	b	c	d	e	f	g	h	i	j	k
		X	X	X		X					X
Mapping of instructional objectives with student outcome		1-3	1-3	1-3		1-3					3
List of Topics Covered											
LIST OF EXPERIMENTS											

MICROWAVE EXPERIMENTS

1. Mode Characteristics of Reflex Klystron.
2. Study of power distribution in Directional coupler, E & H plane and Magic tee.
3. Wavelength and Frequency measurement.
4. Impedance measurement by slotted line method.
5. Gain and Radiation pattern of Horn antenna.
6. Study of Micro strip components.

OPTICAL COMMUNICATION EXPERIMENTS

1. D. C. Characteristics of LED and Laser diode.
2. D. C. Characteristics of PIN and APD photo diode.
3. Measurement of Numerical aperture, Propagation and Bending Loss in fiber.
4. Fiber Optic Analog and Digital Link.

PSPICE SIMULATION

1. Operating characteristics of Microwave semiconductor devices (bipolar transistors, GaAs FETs, varactor diodes, PIN diodes).
2. Microwave transistor amplifier and oscillator design.
3. Operating characteristics of optical devices (LED and photodiode).

Delta Modulation and Demodulation. 10. Differential Pulse Code Modulation and Demodulation. 11. Data formatting. 12. BER comparison of different modulation schemes in AWGN channel in MATLAB Simulink. 13. Performance analysis of different channels with error correcting codes. 											

Course Number and Title	
EC1049 MINOR PROJECT	
Credits / Contact Hours	
1/30	
Instructor Name	
Mrs.N.Saraswathi	
Textbooks, References	
Purpose	
To carry out a design project in one of the specializations of Electronics and communication engineering with substantial multidisciplinary component	
Prerequisites	Co-requisites
Nil	Nil
Required, Elective or Selected Elective (as per Table 5.1a)	
Required	
Instructional Objectives	

To guide the students in such a way so that they carry out a work on a topic as a forerunner to the full fledged project work to be taken subsequently in VIII semester. The project work shall consist of substantial multidisciplinary component.											
Student Outcomes from Criterion 3 covered by this Course											
Student outcome	a	b	c	d	e	f	g	h	i	j	k
	X	X	X	X	X	X	X	X	X	X	X
Mapping of instructional objectives with student outcome	1										
List of Topics Covered											
<p>The students will carry out a project in one of the following Electronics and communication engineering areas but with substantial multidisciplinary component involving Electrical Engineering, Computer Science Engineering, Information Technology, Mechanical Engineering, Bio-Medical Engineering.</p> <ul style="list-style-type: none"> Communication Signal Processing Electronics VLSI Embedded <p>Student groups will be formed (6 in a group) and a faculty member will be allocated to guide them. There will be three reviews. First review will not carry any marks but the project topic will be finalized in it. Of remaining 2 reviews one will be carried out in the mid-semester and the last one by the end of semester.</p>

	X				X			X	X	X	
Mapping of instructional objectives with student outcome	1-3				1-3			1-4	1-4	1-3	
List of Topics Covered											
<p>UNIT I-INTRODUCTION TO WIRELESS COMMUNICATION (9 hours) Evolution of Mobile Radio Communication – Examples of Wireless Communication System – Cellular concept – Frequency Reuse – Channel assignment – Hand off – Interference & System capacity – Trunking and Erlang – capacity calculation – Improving coverage and capacity.</p> <p>UNIT II-MOBILE RADIO WAVE PROPAGATION (LARGE SCALE FADING) (9 hours) Radio wave Propagation – Transmit and receive Signal Models – Free Space path loss – Ray Tracing – Empirical Path loss models – Simplified path loss model – Shadow fading – Combine path loss and Shadowing – Outage Probability under path loss & shadowing – Cell coverage area.</p> <p>UNIT III-MOBILE RADIO WAVE PROPAGATION (SMALL SCALE FADING & MULTIPATH) (9 hours) Small Scale Multipath Propagation – Impulse response model of a Multipath Channel – Small Scale Multipath Measurements – Parameters of Mobile Multipath Channels – Types of fading (fading effects due to Multipath Time Delay Spread & Doppler spread) – Rayleigh and Ricean Distribution.</p> <p>UNIT IV-CAPACITY, DIVERSITY AND EQUALIZATION IN WIRELESS SYSTEM (9 hours) Capacity in AWGN – Capacity of Flat Fading Channels – Channel and System Model – Channel Distribution Information known – CSI at Receiver Diversity Technique – Selection combining – EGC – MRC – Feedback – Time – Frequency – Rake Receiver – Interleaving.</p> <p>Equalization – Linear Equalization – Non linear (DFE & MLSE) – Algorithm of Adaptive Equalization – Zero Frequency algorithm – LMS algorithm – Recursive Least Square algorithm.</p> <p>UNIT V-WIRELESS SYSTEMS AND STANDARDS (9 hours) AMPS & ETACS System overview – Call handling – GSM System – Services and features – Architecture – Radio Subsystem – GSM Call – Frame Structure – Signal Processing – CDMA Digital Cellular Standard (IS-95) – Frequency & Channel Specification – Forward CDMA channel – Reverse CDMA channel. Introduction to OFDM system – Cyclic prefix – Matrix representation case study: IEEE 802.11a wireless LAN.</p>											

Course Number and Title											
EC1027 COMPUTER COMMUNICATION											
Credits / Contact Hours											
3/45											
Instructor Name											
Ms.T.Ramya.											
Textbooks, References											
<ul style="list-style-type: none"> • Behrouz A.Fehrouzan, “Data communication & Networking”, Mc-Graw Hill, 4th Edition, 2007. • Andrew S.Tanenbaum, “Computer Networks”, Pearson Education India, 3rd Edition, 2010. • William Stallings, “Data & Computer Communication”, Pearson Education India, 8th Edition, 2007. • Rarnier Handel, N.Huber, Schroder, “ATM Networks Concepts, Protocols Applications”, Addison Welsey, 3rd Edition, 2009. 											
Purpose											
It is very much required for an ECE graduate to know use of computers in communication as well as in network formation. The syllabus focuses on mode of data transfer, layer and protocols related to networks.											
Prerequisites						Co-requisites					
Nil						Nil					
Required, Elective or Selected Elective (as per Table 5.1a)											
Required											
Instructional Objectives											
<ol style="list-style-type: none"> 1. Understand about the functions and services of all 7 layers of OSI model. 2. Get an idea of various network standards. 											
Student Outcomes from Criterion 3 covered by this Course											
Student outcome	a	b	c	d	e	f	g	h	i	j	k
								X	X	X	
Mapping of instructional objectives with student outcome								1,2	1,2	1,2	
List of Topics Covered											
<p>UNIT I-DATA COMMUNICATION & NETWORKING BASICS (9 hours) Data transfer modes Telephone system – Protocols & standards – Multiplexing – Circuit switching – Message & packet switching – Introduction to LAN, MAN & WAN – IEEE standards for LAN – Network topologies.</p> <p>UNIT II-OSI LOWER LAYERS (9 hours) Network models – OSI layer architecture – Issues in data traffic over network – Physical layer standards – Data link control & protocol – ARQ schemes – HDLC protocol.</p> <p>UNIT III-NETWORK LAYER (9 hours) Need for Internetworking – Addressing – Routing Issues – Internet protocol (IPV4/V6) – Congestion & flow control mechanism – TCP/IP model.</p>											

UNIT IV-OSI HIGHER LAYERS (9 hours)

Transport layer – TCP & UDP – Session layer issues – Presentation layer – Application layer.

UNIT V-APPLICATION & INTRODUCTION TO ISDN (9 hours)

Application layer: Email – FTP – HTTP – Compression Techniques. Introduction to ISDN – Broadband ISDN Features – ATM Concept.

Course Number and Title**EC1028 ELEMENTS OF INFORMATION THEORY AND CODING****Credits / Contact Hours**

3/45

Instructor Name

Mrs. J.Subhashini

Textbooks, References

- Hamming, Richard W, “*Coding and Information Theory*”, Prentice Hall Inc., NJ, 1986.
- Proakis J. G., “*Digital Communications*”, McGraw Hill Inc., 4th Edition, NY, 2001.

Purpose

To learn the basic principles of encoding, error detection, and error correction, decoding, mutual information, and channel capacity, which will be extremely useful in understanding the working of a digital communication system.

Prerequisites

MA1024

Co-requisites

Nil

Required, Elective or Selected Elective (as per Table 5.1a)

Required

Instructional Objectives

1. To analyze the process of coding for analog and discrete sources and the mathematical model for information sources.
2. To solve problems on error detection and error correction for various types of codes.
3. To understand the principles of Huffman codes and to solve problems therein.
4. To study the properties of Entropy and the principles of Shannon-Fano coding.
5. To learn the concepts of mutual information, channel capacity, and Shannon’s Main Theorem.

Student Outcomes from Criterion 3 covered by this Course

Student outcome	a	b	c	d	e	f	g	h	i	j	k
	X				X						
Mapping of instructional objectives with student outcome	2,5				1,2,4,5						

List of Topics Covered**UNIT I-SOURCE CODING (9 hours)**

Model of signaling system - Mathematical models for information sources – Encoding a source alphabet – ASCII code – Radix r code – Miscellaneous codes - A Logarithmic measure of information – Coding for Discrete sources – Coding for analog sources (Optimum quantization) – Coding techniques for analog sources.

UNIT II-ERROR DETECTING AND ERROR CORRECTING CODES (10 hours)

Simple parity checks – CRC codes – Hamming weight – Hamming distance – Minimum distance decoding – Single / Double parity checks – Hamming codes – Linear block codes – Cyclic codes – Syndrome calculation – Block encoders and Decoders.

UNIT III-VARIABLE-LENGTH CODES – HUFFMAN CODES (10 hours)

Unique decoding – Instantaneous codes and its construction – The Kraft’s inequality – Shortened block codes – The McMillan’s Inequality – Huffman codes and its special cases – Extensions of a code – Huffman codes Radix r – Noise in Huffman coding probabilities – Use of Huffman codes – Hamming Huffman coding

UNIT IV-ENTROPY AND SHANNON’S FIRST THEOREM (5 hours)

Entropy and its Mathematical properties – Entropy and coding – Shannon-Fano coding – Entropy of a Markov process – The Adjoint system – Robustness of Entropy.

UNIT V-MUTUAL INFORMATION, CHANNEL CAPACITY & SHANNON’S MAIN THEOREM (11 hours)

Information channel – Capacity of a Binary symmetric channel – System entropies – Mutual information – Definition of channel capacity – Uniform channel – Conditional mutual information – Random encoding – Average random code – Fano bound – Converse of Shannon’s theorem.

EC1048 INDUSTRIAL TRAINING II (Training to be undergone after VI semester)											
Credits / Contact Hours											
1											
Instructor Name											
Mr.K.Ramesh											
Textbooks, References											
N/A											
Purpose											
To provide hands-on experience at site / planning or design office where Electronics and Communication engineering projects are carried out											
Prerequisites						Co-requisites					
Nil						Nil					
Required, Elective or Selected Elective (as per Table 5.1a)											
Required											
Instructional Objectives											
Students have to undergo three – week practical training in Electronics and Communication Engineering related project site or design / planning office so that they become aware of the practical application of theoretical concepts studied in the class rooms. .											
Student Outcomes from Criterion 3 covered by this Course											
Student outcome	a	b	c	d	e	f	g	h	i	j	k
				X	X	X	X	X	X	X	X
Mapping of instructional objectives with student outcome	1										
List of Topics Covered											
Students have to undergo two-week practical training in Electronics and Communication Engineering related project site or design / planning office of their choice but with the approval of the department. At the end of the training student will submit a report as per the prescribed format to the department.											

Course Number and Title											
EC1050 MAJOR PROJECT / PRACTICE SCHOOL											
Credits / Contact Hours											
12/360											

Instructor Name											
Dr.K.Kalimuthu											
Textbooks, References											
Purpose											
To simulate real life situations related to Electronics and Communication Engineering and impart adequate training so that confidence to face and tackle any problem in the field is developed in the college itself.											
Prerequisites						Co-requisites					
Nil						Nil					
Required, Elective or Selected Elective (as per Table 5.1a)											
Required											
Instructional Objectives											
To guide the students such a way that the they carry out a comprehensive work on the chosen topic which will stand them in good stead as they face real life situations. The project work so chosen by the student shall culminate in gaining of major design experience in the related area of specialization.											
Student Outcomes from Criterion 3 covered by this Course											
Student outcome	a	b	c	d	e	f	g	h	i	j	k
	X	X	X	X	X	X	X	X	X	X	X
Mapping of instructional objectives with student outcome	1										
List of Topics Covered											
MAJOR PROJECT											
Each project will cover all the aspects (to the extent possible) like investigation, designing, coding detailing ,implementation of a Electronics and Communication circuits / systems in which the aspects like performance analysis, application of relevant standards etc., will find a place. Alternately, a few research problems also may be identified for investigation and the use of laboratory facilities to the fullest extent may be taken as a project work. The project shall be driven by realistic constraints like that related to economic, environmental, social, political, ethical, health & safety, manufacturability and sustainability. The outcomes to be attained by students by doing the project work shall be spelt out clearly. A project report is to be submitted on the topic which will be evaluated during the final review. Assessment procedure will be as spelt out in the regulations.											
PRACTICE SCHOOL											
Alternately, a student is encouraged to take an industrial project with Electronics and Communication companies or firms chosen by the institute. In such cases the student will stay with the firm and carry out the project. The project will be guided by the faculty member and the concerned officer in the industry. All the requirements spelt out under ‘MAJOR PROJECT’ above, shall be incorporated under this work also. However reviews will be conducted in the institute which the student shall attend.

Department Elective Courses

2013 Curriculum Course Code	Name of the Course
EC1101	Electromagnetic Interference and Electromagnetic Compatibility
EC1102	Fundamentals of MEMS
EC1103	Fundamentals of Nanotechnology
EC1104	Electronic Measurements & Instrumentation
EC1105	Sensors and Transducers
EC1106	Biomedical Instrumentation
EC1107	Control Engineering
EC1108	Computer Architecture and Organization
EC1109	Embedded Systems
EC1110	Virtual Instrumentation Using LABVIEW
EC1111	Digital Television
EC1112	Digital Image Processing
EC1113	Radar and Navigational Aids
EC1114	Communication Switching Techniques
EC1115	ASIC Design
EC1116	Embedded C and Micro Controller
EC1117	Cryptography and Network Security
EC1118	Satellite Communication and Broadcasting
EC1119	Mobile Computing
EC1120	Bluetooth Technology
EC1121	Communication Network Protocols
EC1122	Photonics and Optical Networks
EC1123	RF System Design for Wireless Communications
EC1124	Neural Network and Fuzzy Logic
EC1125	Digital Logic Design With PLDs And VHDL

Course Number and Title											
EC1101 ELECTROMAGNETIC INTERFERENCE AND ELECTROMAGNETIC COMPATIBILITY											
Credits / Contact Hours											
3/ 45											
Instructor Name											
Dr.P.Eswaran											
Textbooks, References

					X			X			
Mapping of instructional objectives with student outcome					1,2,3			1,2			
List of Topics Covered											
UNIT I-EMI ENVIRONMENT (9 hours) Concepts of EMI and EMC and Definitions, Sources of EMI – Celestial Electromagnetic noise- Lightning Discharge-Electrostatic Discharge- Electromagnetic Pulse-Electromagnetic emissions-Noise from relays and Switches-Nonlinearities in Circuits.											
UNIT II-EMI COUPLING PRINCIPLES (9 hours) Capacitive coupling - Inductive coupling- Common Impedance Ground Coupling- Ground Loop coupling-											

Transients in power supply lines- Radiation coupling-Conduction coupling-Common – mode and Differential-mode interferences- Conducted EM noise on power supply lines.

UNIT III-EMI MEASUREMENTS (9 hours)

Open Area test site measurements-Measurement precautions – Anechoic Chamber – TEM - Reverberating TEM-GTEM cell – Comparisons.

UNIT IV-EMI CONTROL TECHNIQUES (9 hours)

EMC Technology- Grounding-Shielding-Electrical Bonding-Power line filter-CM filter – DM filter- EMI suppression Cables- EMC Connectors -Isolation transformer.

UNIT V-EMI / EMC STANDARDS (9 hours)

Introduction- Standards for EMI/EMC- MIL-STD-461/462-IEEE/ANSI standard-CISPR/IEC standard- FCC regulations-British standards-VDE standards-Euro norms-Performance standards-some comparisons.

Course Number and Title	
EC1102 FUNDAMENTALS OF MEMS	
Credits / Contact Hours	
3 / 45	
Instructor Name	
Dr.P.Eswaran	
Textbooks, References	
<ul style="list-style-type: none"> • Chang Liu, “Foundations of MEMS”, Pearson Indian Print, 1st Edition, 2012. • Gaberiel M. Rebiz, “RF MEMS Theory,Design and Technology”, John Wiley & Sons, 2003. • Charles P. Poole and Frank J. Owens, “Introduction to Nanotechnology”, John Wiley & Sons, 2003. • Julian W.Gardner and Vijay K Varadhan, “Microsensors, MEMS and Smart Devices”, John Wiley & sons, 2001. 	
Purpose	
This course is offered to students to gain basic knowledge on MEMS (Micro Electro Mechanical System) and various fabrication techniques. This enables them to design, analyze, fabricate and test the MEMS based components.	
Prerequisites	Co-requisites
PY1001, CY1001, PY1003, ME1001 & EC1001	Nil
Required, Elective or Selected Elective (as per Table 5.1a)	
Selected Elective	
Instructional Objectives	
<ol style="list-style-type: none"> 1. To introduce MEMS and micro fabrication. 2. To study the essential electrical and mechanical concepts of MEMS. 3. To study various sensing and actuating technique. 4. To know about the polymer and optical MEMS.

Instructional Objectives

1. The objective of this course is to make students familiar with the important concepts applicable to small electronic devices, their fabrication, characterization and application.

Student Outcomes from Criterion 3 covered by this Course

Student outcome	a	b	c	d	e	f	g	h	i	j	k
	X	X									
Mapping of instructional objectives with student outcome	1	1									

List of Topics Covered

UNIT I-LIMITATIONS OF CMOS (9 hours)
 Fundamentals of MOSFET devices - Scaling of CMOS – Limitations – Alternative concepts in materials – **Structures of MOS devices:** SOI MOSFET, FINFETS, Dual Gate MOSFET, Ferro electric FETs.

UNIT II-MICRO AND NANO FABRICATION (9 hours)
 Optical Lithography – Electron beam Lithography – Atomic Lithography – Molecular beam epitaxy - Nano lithography.

UNIT III-CHARACTERIZATION EQUIPMENTS (9 hours)
 Principles of Electron Microscopes – Scanning Electron Microscope – Transmission Electron Microscope - Atomic Force Microscope – Scanning Tunneling Microscope.

UNIT IV-NANO DEVICES – I (9 hours)
 Resonant tunneling diodes – Single electron devices – Josephson junction – Single Flux Quantum logic – Molecular electronics.

UNIT V-NANO DEVICES – II (9 hours)
Quantum computing: principles – Qbits – Carbon nanotubes (CNT): Characteristics, CNTFET, Application of CNT - Spintronics: Principle, Spin valves, Magnetic Tunnel Junctions, Spin FETs, MRAM.

List of Topics Covered**UNIT I-INTRODUCTION (9 hours)**

Definition, classification, static and dynamic parameters, Characterization – Electrical, mechanical, thermal, optical, biological and chemical, Classification of errors – Error analysis, Static and dynamic characteristics of transducers, Performance measures of sensors.

UNIT II-MECHANICAL AND ELECTROMECHANICAL SENSORS (9 hours)

Resistive Potentiometer, strain gauge, Inductive sensors and transducer, capacitive sensors, ultrasonic sensors.

UNIT III-THERMAL AND RADIATION SENSOR (9 hours)

Thermal Sensors: Gas thermometric sensors, acoustic temperature sensors, magnetic thermometer, resistance change -type thermometric sensors, thermo emf sensors, junction semiconductor types, Thermal radiation sensors, spectroscopic thermometry

Radiation Sensors: Photo detectors, photovoltaic and photo junction cells, photo sensitive cell, photo FETs and other devices.

UNIT IV-MAGNETIC AND ELECTROANALYTICAL SENSOR (9 hours)

Magnetic Sensors: Force and displacement measurement, magneto resistive sensors, Hall Effect sensor, Inductance and eddy current sensors, Angular/rotary movement transducer, Electromagnetic flow meter, squid sensor.

Electro analytical Sensors: Electro chemical cell, cell potential, sensor electrodes, electro ceramics in gas media, chemFET.

UNIT V-SENSORS AND THEIR APPLICATIONS (9 hours)

Automobile sensor, Home appliance sensor, Aerospace sensors, sensors for manufacturing, medical diagnostic sensors, environmental monitoring.

Purpose

The purpose of this course is to introduce the students to the basics of Electro-physiology and its measurements, non-electrical parameters related to various systems of human body and their measurements, Electrodes and

Transducers used in bio signal acquisition. This course will enable the students to learn the basic principles of different instruments/equipment used in the health care industry. Also student will get to know about various Medical Imaging techniques used for diagnosis along with other diagnostic and therapeutic devices.

Prerequisites	Co-requisites
EC1001	Nil

Required, Elective or Selected Elective (as per Table 5.1a)

Required

Instructional Objectives

1. To understand the Origin of Bioelectric potential and their measurements using appropriate electrodes and Transducers.
2. To understand how to measure various biochemical and nonelectrical parameters of human system.
3. To understand the Electro-physiology of various systems and recording of the bioelectric signals.
4. To understand the working principles of various Imaging techniques.
5. To understand the design aspects of various Assist and Therapeutic Devices..

Student Outcomes from Criterion 3 covered by this Course

Student outcome	a	b	c	d	e	f	g	h	i	j	k
		X		X	X		X		X		
Mapping of instructional objectives with student outcome	1,2		1,2,5	3,4		3,5		5			

List of Topics Covered

UNIT I-BIOPOTENTIAL ELECTRODES AND TRANSDUCERS (9 hours)

Electrode theory- Electrode electrolyte interface, half-cell potential, Hydrogen, Calomel, Ag-AgCl electrode, needle and wire electrode, surface electrodes, microelectrode-metal micropipette.

Physiological Transducers: Resistive transducers - Thermistor, Inductive Transducers - Capacitive Transducers - Photoelectric Transducers -Piezoelectric Transducers -, Biochemical Transducers- pH, pCO₂ and pO₂ electrodes.

UNIT II-BIO ELECTRIC POTENTIALS AND ELECTRO PHYSIOLOGICAL MEASUREMENTS (9 hours)

Sources of Bioelectric potentials - Resting and Action potential - Propagation of Action potential
Electrophysiology of Heart, Nervous System and Muscle Activity

Bio-signals: ECG - EEG, Evoked potential – EMG- ERG- Electrodes and Lead System, Typical waveforms and Signal characteristics

Signal Conditioning circuits: Design of low Noise Medical Amplifier, Isolation Amplifier, Protection Circuits and Electrical Safety.

UNIT III-NON-ELECTRICAL PARAMETER MEASUREMENTS (9 hours)

Measurement of Blood Pressure, Blood Flow, Plethysmography, Cardiac Output, Heart Sounds- Lung Volumes and their measurements- Auto analyzer –Blood cell counters, Oxygen saturation of Blood.

UNIT IV-MEDICAL IMAGING TECHNIQUES (9 hours)

X-ray machine – Computer Tomography – Angiography – Ultrasonography – Magnetic Resonance Imaging System – Nuclear Imaging Techniques – Thermography – Lasers in Medicine – Endoscopy.

UNIT V-TELEMETRY, ASSIST AND THERAPEUTIC DEVICES (9 hours)

Bio telemetry – Elements and Design of Bio telemetry system. Assist and Therapeutic devices: Cardiac Pacemakers – Defibrillators – Artificial Heart Valves – Artificial Heart Lung machine – Artificial Kidney – Orthopaedic Prosthetics – Respiratory therapy equipment – Patient Monitoring System.

Purpose											
To understand the fundamental need for control system and to derive its transfer function.											
Prerequisites					Co-requisites						
Nil					Nil						
Required, Elective or Selected Elective (as per Table 5.1a)											
Selected Elective											
Instructional Objectives											
<ol style="list-style-type: none"> To understand the methods of representation of systems and deriving their transfer function model. To give basic knowledge is obtaining the open loop and closed loop frequency responses of systems. Applications of control systems. 											
Student Outcomes from Criterion 3 covered by this Course											
Student outcome	a	b	c	d	e	f	g	h	i	j	k
	X		X	X	X						
Mapping of instructional objectives with student outcome	1		1	2	2						
List of Topics Covered											
<p>UNIT I-SYSTEMS AND THEIR REPRESENTATION (9 hours) Control systems- Basic elements in control systems – Open and closed loop systems – Electrical analogy of mechanical and thermal systems – Transfer function –Block diagram reduction techniques – Signal flow graphs.</p> <p>UNIT II-TIME RESPONSE (9 hours) Time response – Time domain specifications – Types of test input – I and II order system response – Error coefficients – Generalized error series – Steady state error – P, PI, PID modes of feedback control.</p> <p>UNIT III-FREQUENCY RESPONSE (9 hours) Frequency response of the system – Correlation between time and frequency response – Gain and Phase margin – Bode plot - Polar plot.</p> <p>UNIT IV-STABILITY OF CONTROL SYSTEM (9 hours) Characteristics equation – Location of roots in S plane for stability – Routh Hurwitz criterion – Root locus</p>											

List of Topics Covered**UNIT I-INTRODUCTION (9 hours)**

Evolution of Computers, VLSI Era, System Design- Register Level, Processor Level, CPU Organization, Data Representation, Fixed – Point Numbers, Floating Point Numbers, Instruction Formats, Instruction Types. Addressing modes.

UNIT II-DATA PATH DESIGN (9 hours)

Fixed Point Arithmetic, Addition, Subtraction, Multiplication and Division, Combinational and Sequential ALUs, Carry look ahead adder, Robertson Algorithm, Booth’s algorithm, non-restoring division algorithm, Floating Point Arithmetic, Coprocessor, Pipeline Processing, Modified booth’s Algorithm

UNIT III-CONTROL DESIGN (9 hours)

Hardwired Control, Micro programmed Control, Multiplier Control Unit, CPU Control Unit, Pipeline Control, Instruction Pipelines, Pipeline Performance, Superscalar Processing, Nano Programming.

UNIT IV-MEMORY ORGANIZATION (9 hours)

Random Access Memories, Serial - Access Memories, RAM Interfaces, Magnetic Surface Recording, Optical Memories, multilevel memories, Cache & Virtual Memory, Memory Allocation, Associative Memory.

UNIT V-SYSTEM ORGANIZATION (9 hours)

Communication methods, Buses, Bus Control, Bus Interfacing, Bus arbitration, IO and system control, IO interface circuits, Handshaking, DMA and interrupts, vectored interrupts, PCI interrupts, pipeline interrupts, IOP organization, multiprocessors, RISC and CISC processors, Superscalar and vector processor.

Purpose

To enable the students to understand basics, programming techniques, data acquisition and interfacing techniques of virtual instrumentation and to use VI for different applications.

Prerequisites	Co-requisites
Nil	Nil

Required, Elective or Selected Elective (as per Table 5.1a)

Selected Elective

Instructional Objectives

1. The students will be able to familiarize the basics and need of VI.
2. The students will be able to learn LABVIEW software basics.
3. To get better understanding of data acquisition techniques.
4. The students can have an exposure to different interfacing techniques.
5. The students can able to design some real time application using LABVIEW software.

Student Outcomes from Criterion 3 covered by this Course

Student outcome	a	b	c	d	e	f	g	h	i	j	k
	X	X	X		X						X
Mapping of instructional objectives with student outcome	1,3,4,5	2,5	2,5		2,4,5		,				2,3,4

List of Topics Covered

UNIT I-VIRTUAL INSTRUMENTATION (9 hours)

Historical perspective, Need of VI, Advantages of VI, Define VI, block diagram & architecture of VI, data flow techniques, graphical programming in data flow, comparison with conventional programming.

UNIT II-VI PROGRAMMING TECHNIQUES (9 hours)

VIS and sub-VIS, loops & charts, arrays, clusters, graphs, case & sequence structures, formula modes, local and global variable, string & file input.

UNIT III-DATA ACQUISITION BASICS (9 hours)

Introduction to data acquisition on PC, Sampling fundamentals, Input/Output techniques and buses.ADC, DAC, DIO, Counters & timers, PC Hardware structure, timing, interrupts, DMA, Software and Hardware Installation, Simple applications using NI MyDAQ and NI ELVIS.

UNIT IV-LABVIEW IN SIGNAL PROCESSING (9 hours)

Waveform Generation, Sampling, Quantization, Aliasing, Signal Reconstruction. Fourier transforms Power spectrum, Correlation methods, windowing & flittering. Digital Filter Design, IIR/FIR Filtering system Design, Adaptive Filter design.

UNIT V-FREQUENCY DOMAIN PROCESSING (9 hours)

Discrete Fourier Transform and Fast Fourier Transform, STFT, Wavelet Transform, Signal Processing applications.

Course Number and Title
EC1114 COMMUNICATION SWITCHING TECHNIQUES
Credits / Contact Hours

Instructor Name

Mrs.M.Neelaveni Ammal

Textbooks, References

- Flood.J.E, “Telecommunications Switching, Traffic and Networks”, Pearson Education Ltd., 1999.
- Thiagarajan Viswanathan, “Telecommunication Switching Systems and Network”s, Prentice Hall of India Pvt. Ltd, 1992.

Purpose

To learn the basic principles of switching, signaling, and traffic in the context of telecommunication networks.

Prerequisites

MA1024 & EC1018

Co-requisites

Nil

Required, Elective or Selected Elective (as per Table 5.1a)

Selected Elective

Instructional Objectives

1. To study the concepts of message switching, circuit switching, strowger switching, crossbar switching, electronic switching, and digital switching.
2. To understand the problems of congestion, queuing, and to study methods like Grade of Service, and Blocking Probability to provide an estimate of the amount of traffic present in various systems.
3. To solve problems in single-stage networks, strict-sense non-blocking networks, and sectionalized switching networks.
4. To study concepts like Reliability, Availability, and Security in various types of switching systems.
5. To learn the different kinds of signaling, circuit and packet switching techniques.

Student Outcomes from Criterion 3 covered by this Course

Student outcome	a	b	c	d	e	f	g	h	i	j	k
		X		X		X					
Mapping of instructional objectives with student outcome	1,4,5		4		2,3,4,5						

List of Topics Covered**UNIT I-BASIC SWITCHING SYSTEMS FOR TELECOMMUNICATION (9 hours)**

Crossbar switching – Electronic space division switching – Time division switching – Time multiplexed switching – n-stage combination switching - hybrid time and space division multiplexes.

UNIT II-TRAFFIC ENGINEERING (9 hours)

Congestion – Network traffic load and Parameters – Traffic measurement – Lost-call system – Grade of Service and Blocking probability – Modeling switching systems – Incoming traffic and service time characterization – Blocking models and loss estimates – Queuing systems – Simulation models.

UNIT III-SWITCHING NETWORKS (9 hours)

Single-stage networks – Gradings – Link systems – Grades of service of link systems – Application of graph theory to link systems – Use of expansion – Call packing – Rearrangeable networks – Strict-sense non-blocking networks – Sectionalized switching networks.

UNIT IV-TIME-DIVISION SWITCHING AND CONTROL OF SWITCHING SYSTEMS (9 hours)

Space and time switching – Time-division switching networks – Grades of service of time-division switching

networks – Non-blocking networks – Synchronization – Call-processing functions – Common control – Reliability, availability and security – Stored program control.

UNIT V-SIGNALING AND PACKET SWITCHING (9 hours)

Customer line signaling – FDM carrier systems – PCM signaling – Inter-register signaling – Common-channel signaling principles – CCITT signaling – Digital customer line signaling – Statistical multiplexing – Local area and wide area networks – Large scale and Broadband networks.

- Pratt, Timothy, Charles W. Bostian, “*Satellite Communication*”, John Wiley and Sons, 2nd Edition, New York, 1986.

Purpose

The main objective of this course is to make the students understand the basic concept in the field of satellite communication. This subject gives the students an opportunity to know how to place a satellite in an orbit. The students are taught about the earth and space subsystems. The satellite services like broadcasting are dealt thoroughly. This will help the student to understand and appreciate the subject.

Prerequisites

EC1018

Co-requisites

Nil

Required, Elective or Selected Elective (as per Table 5.1a)

Selected Elective

Instructional Objectives

At the end of this course students will gain knowledge in topics such as

1. Orbital aspects involved in satellite communication.
2. Power budget calculation.
3. Satellite system and services provided.

Co-requisites

Nil

Required, Elective or Selected Elective (as per Table 5.1a)

Selected Elective

Instructional Objectives

1. To study the fundamental concepts of Bluetooth module.
2. To analyze the protocol operation.
3. To gain knowledge on various low power modes and Quality of Service parameters.
4. To understand the testing methodology and the related standards.

Student Outcomes from Criterion 3 covered by this Course

Student outcome	a	b	c	d	e	f	g	h	i	j	k
	X		X					X			
Mapping of instructional objectives with student outcome	1		2					3			

List of Topics Covered

UNIT I-THE BLUETOOTH MODULE (8 hours)

Introduction-overview - the Bluetooth module-antennas- Base band - Introduction-Bluetooth device address – Masters, slaves, and Pico nets-system timing-physical links-Bluetooth packet structure-logical channels-frequency hopping.

UNIT II-THE LINK CONTROLLER (10 hours)

The link controller-link control protocol-link controller operation-Pico net, scatter net operation-master/slave role switching-base band/link controller architectural overview -link manager-the host controller interface.

UNIT III-THE BLUETOOTH HOST (10 hours)

The bluetooth host-logical link control and adaptation protocol –RFCOMM- the service discovery protocol – the wireless access protocol-OBEX and IrDA-telephony control protocol.

UNIT IV-CROSS LAYER FUNCTIONS (8 hours)

Cross layer functions-Encryption and security-low power operations-controlling low power modes-hold mode-sniff mode-park mode-quality of service-managing Bluetooth devices.

UNITV-ZIGBEE NETOWRKS (9 hours)

Zigbee communication basics – Zigbee network layers and their functions – Zigbee MAC series, MAC frame format – Transceiver building block – Receiver sensitivity – 2.4 GHz and 868/915 MHz operation – FCC regulations – Applications – Home automation – Healthcare Industrial automation.

	X										
Mapping of instructional objectives with student outcome	1-3										
List of Topics Covered											
<p>UNIT I-INTRODUCTION TO RF AND WIRELESS SYSTEMS (9 hours) Characteristics of RF signals, Wireless communication systems, Wireless Standards, Introduction to Multiple Access Techniques FDMA, TDMA,CDMA and OFDMA.</p> <p>UNIT II-RF COMPONENTS AND CIRCUITS (9 hours) Components: Capacitors, Inductors, Tuning and Matching. Circuits: Low Noise Amplifiers, Mixers, Oscillators, Frequency Synthesizers, Power Amplifiers.</p> <p>UNIT III-RADIO ARCHITECTURES (9 hours) Two step transmitter Architecture, Homodyne Receiver Architecture, Super heterodyne Architecture, Direct Conversion (Zero IF) Architecture, Low IF Architecture, Digital IF Receivers and Band Pass sampling Radio Architectures.</p> <p>UNIT IV-SYSTEM ANALYSIS AND DESIGN (9 hours) Receiver: Sensitivity & Noise Figure of Receiver, Inter modulation Characteristics, Single Tone Desensitization, Adjacent/Alternate channel selectivity, Receiver Dynamic Range and AGC system, System design and performance evaluation. Transmitter: Transmitter power and spectrum, Modulation accuracy, Adjacent and alternate channel power, Noise emission calculation.</p> <p>UNIT V-APPLICATIONS AND CASE STUDIES (9 hours) Multimode and Multiband Super heterodyne Transceiver, Direct Conversion Transceiver Case studies: FM Receiver, Pager Receiver, DECT transceiver, GSM Transceiver, Wireless LAN RFIC, Four band GSM, GPRS, EDGE handset.</p>											

Course Number and Title
EC1124 NEURAL NETWORK AND FUZZY LOGIC
Credits / Contact Hours
3 / 45
Instructor Name
Mr.B.Srinath

Textbooks, References											
<ul style="list-style-type: none"> Freeman J.A. and Skapura B.M., “Neural Networks, Algorithms Applications and Programming Techniques”, Addison-Wesely, 1991. Martin T.Hagan, “Neural network design”, Cengage publications, 2010. Zimmerman.H.J, “Fuzzy set theory and its Applications”, Kluwer academic Publishers, 2001. 											
Purpose											
This course provides a way to study the Artificial Neural Networks and Fuzzy Logic concepts.											
Prerequisites						Co-requisites					
Nil						Nil					
Required, Elective or Selected Elective (as per Table 5.1a)											
Selected Elective											
Instructional Objectives											
<ol style="list-style-type: none"> To learn the various architectures of ANN. To learn the methods of representing information in ANN like self organizing networks, associative and competitive learning. 											
Student Outcomes from Criterion 3 covered by this Course											
Student outcome	a	b	c	d	e	f	g	h	i	j	k
	X				X						
Mapping of instructional objectives with student outcome	1,2				1,2						
List of Topics Covered											
<p>UNIT I-INTRODUCTION TO ARTIFICIAL NEURAL NETWORKS (9 hours) Neuro-physiology - General Processing Element - ADALINE - LMS learning rule – MADALINE – XOR Problem – MLP - Back Propagation Network - Updation of output and hidden layer weights - application of BPN.</p> <p>UNIT II-ASSOCIATIVE MEMORY & CPN (9 hours) Associative memory - Bi-directional Associative Memory – Hopfield memory - traveling sales man problem Annealing, Boltzmann machine - learning – application - Counter Propagation network –architecture – training – Applications.</p> <p>UNIT III-SELF ORGANIZING MAP & ART (9 hours) Self-organizing map - learning algorithm - feature map classifier – applications - architecture of Adaptive Resonance Theory - pattern matching in ART network.</p> <p>UNIT IV-CRISP SETS AND FUZZY SETS (9 hours) Introduction – crisp sets an overview – the notion of fuzzy sets –Basic concepts of fuzzy sets – classical logic an overview – Fuzzy logic- Operations on fuzzy sets - fuzzy complement – fuzzy union – fuzzy intersection – combinations of operations – general aggregation operations.</p> <p>UNIT V-FUZZY RELATIONS (9 hours) Crisp and fuzzy relations – binary relations – binary relations on a single set– equivalence and similarity relations – Compatibility or tolerance relations– orderings – morphisms-fuzzy relation equations.</p>											

Course Number and Title											
EC1125 DIGITAL LOGIC DESIGN WITH PLDS AND VHDL											
Credits / Contact Hours											
3 / 45											
Instructor Name											
Mr.R.Prithiviraj											
Textbooks, References											
<ul style="list-style-type: none"> • Charles. H. Roth, Jr, “<i>Digital Systems Design using VHDL</i>”, CENGAGE Learning, Third Indian Reprint, 2010. • Zvolinski, “<i>Digital System Design With VHDL</i>”, 2/E, Pearson Education India, 2004. • Ian Grout, “<i>Digital Systems Design with FPGAs and CPLDs</i>”, Newness, 2011. 											
Purpose											
Learning design of digital circuits is a fundamental necessity for designing practical systems. To develop standard design practices for digital circuits at a higher level of abstraction a hardware description language is useful. This subject provides necessary instruments to achieve that goal.											
Prerequisites						Co-requisites					
EC1029						Nil					
Required, Elective or Selected Elective (as per Table 5.1a)											
Selected Elective											
Instructional Objectives											
<ol style="list-style-type: none"> 1. Apply advanced theorems to simplify the design aspects of various practical circuits. 2. Design State Machines. 3. Implement various digital circuits using Programmable Logic Devices. 4. Implement combinational and sequential circuits using VHDL. 											
Student Outcomes from Criterion 3 covered by this Course											
Student outcome	a	b	c	d	e	f	g	h	i	j	k
		X			X						
Mapping of instructional objectives with student outcome		1-4			1-4						
List of Topics Covered											
<p>UNIT I-ADVANCED TOPICS IN BOOLEAN ALGEBRA (8 hours) Shannon’s Expansion theorem and its application ,Consensus theorem, Reed-Muller Expansion technique, Multiplexer logic as function generators, Implementation of Multiple output logic functions, Static and Dynamic hazards, Design of static hazard-free and dynamic hazard-free logic circuits.</p> <p>UNIT II-SEQUENTIAL CIRCUIT DESIGN (9 hours) Mealy and Moore machines, clocked synchronous sequential circuit design procedure-state diagrams-state table-state reduction-state assignment, Incompletely Specified Sequential Machines.</p>											

UNIT III-DESIGN WITH PROGRAMMABLE LOGIC DEVICES (9 Hours)

Basic concepts, PROM as PLD, Programmable Array Logic (PAL), Programmable Logic Array (PLA), Design of combinational and sequential circuits using PLD's, Complex PLD (CPLD), Introduction to Field Programmable Gate Arrays (FPGA), Xilinx FPGAs-Xilinx 3000 series and 4000 series FPGA.

UNIT IV-INTRODUCTION TO VHDL (9 Hours)

VHDL Description of combination circuits, VHDL Modules- entity and architecture description, Sequential statements and VHDL processes, VHDL Data types and Operators, Concurrent and Sequential Assignment Statements(All types), Different types of Modeling in VHDL – Behavioral, dataflow and structural modeling, Variables, Signals and Constants in VHDL, Package in VHDL.

UNIT V-DIGITAL DESIGN WITH VHDL (10 HOURS)

Combinational Circuit Design using Structural, behavioral and data flow modeling (Circuits like Arithmetic circuits, decoders, encoders, multiplexers, demultiplexers, code converters, 4-bit binary adders, BCD adder, comparator, ALU etc.), Design of Sequential Elements, Registers, Counters and Synchronous Sequential Circuits using VHDL.
