## **PGCET-2013**

				•	
DAY and TIME		COURSE		SUBJECT	
DAY-1 10.30 am to 12.30 pm	(Infrast	I.Tech/M.Ar ructure Ma ses offered b	CIVIL ENGINEERING		
SESSION: FORENOON	V U	ses offered b	CE		
MAXIMUM MARKS	TOTAL D	OTAL DURATION MAXIMUM 150 MINUTES		TIME FOR ANSWERING 120 MINUTES	
100	150 MIN				
MENTION YOUR PG	CET NO.	QU	QUESTION BOOKLET DETAILS		
A 11 TH		VERSION C	CODE	SERIAL NUMBER	
		A - 1		100789	

#### DOs:

- Check whether the PGCET No. has been entered and shaded in the respective circles on the OMR answer sheet.
- Ensure whether the circles corresponding to course and the specific branch have been shaded on the OMR 2. answer sheet.
- 3. This Question Booklet is issued to you by the invigilator after the 2nd Bell i.e., after 10.25 a.m.
- 4. The Serial Number of this question booklet should be entered on the OMR answer sheet.
- The Version Code of this question booklet should be entered on the OMR answer sheet and the respective circles should also be shaded completely.
- Compulsorily sign at the bottom portion of the OMR answer sheet in the space provided. 6.

### DON'Ts:

- THE TIMING AND MARKS PRINTED ON THE OMR ANSWER SHEET SHOULD NOT BE DAMAGED/MUTILATED/SPOILED.
- The 3rd Bell rings at 10.30 a.m., till then;
  - Do not remove the paper seal / polythene bag of this question booklet.
  - Do not look inside this question booklet.
  - Do not start answering on the OMR answer sheet.

### $\overline{\text{IMPORTAN}}$ $\overline{\text{FINSTR}}$ $\overline{\text{UCTIONS}}$ $\overline{\text{TOTO}}$ $\overline{\text{ANDIDA}}$ $\overline{\text{ITS}}$

- This question booklet contains 75 (items) questions and each question will have one statement and four answers. (Four different options / responses.)
- After the 3rd Bell is rung at 10.30 a.m., remove the paper seal / polythene bag of this question booklet and check that this booklet does not have any unprinted or torn or missing pages or items etc., if so, get it replaced by a complete test booklet. Read each item and start answering on the OMR answer sheet.
- During the subsequent 120 minutes:
  - Read each question (item) carefully.
  - Choose one correct answer from out of the four available responses (options / choices) given under each question / item. In case you feel that there is more than one correct response, mark the response which you consider the best. In any case, choose only one response for each item.
  - Completely darken / shade the relevant circle with a BLUE OR BLACK INK BALL POINT PEN against the question number on the OMR answer sheet.
- Use the space provided on each page of the question booklet for Rough Work. Do not use the OMR answer sheet for the same.
- After the last Bell is rung at 12.30 pm, stop marking on the OMR answer sheet and affix your left hand thumb impression on the OMR answer sheet as per the instructions.
- Hand over the OMRANSWER SHEET to the room invigilator as it is.
- After separating the top sheet, the invigilator will return the bottom sheet replica (Candidate's copy) to you to carry home for self-evaluation.
- Preserve the replica of the OMR answer sheet for a minimum period of ONE year.
- Only Non-programmable calculators are allowed.

#### **Marks Distribution**

50 QUESTIONS CARRY ONE MARK EACH (1 TO 50) 25 QUESTIONS CARRY TWO MARKS EACH (51 TO 75)

### CIVIL ENGINEERING

## PART - 1

# Each question carries one mark.

 $(50\times1=50)$ 

1.	Plaster of Paris is obtained by	calcining		erionia. Postantini in properties					
	(A) Bauxite	(B)	Gypsum						
	(C) Kankor	(D)	Limestone						
2.	Basalt is			and the second					
	(A) Sedimentary Rock	( <b>B</b> )	Metamorphic R	ock					
	(C) Extrusive Igneous Rock	( <b>D</b> )	Intrusive Igneou	is Rock					
3.	The effective Length of colum	on fixed at one e	nd and hinged at	the other is					
	(A) L	(B)	1.5L						
	(C) 0.85L	<b>(D)</b>	0.7L						
4.	Torsional rigidity is the produ	ict of							
	(A) Modulus of Elasticity and Moment of Inertia								
	(B) Rigidity Modulus and Moment of Inertia								
	(C) Rigidity Modulus and P	olar Moment of	Inertia	t set					
	(D) None of these								
5.	The number of independent ematerial is	elastic constants		en e	eneous				
	(A) 4	<b>(B)</b>	3	The second of th					
	(C) 2	(D)	6						
		1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1	$\mathcal{F}_{\mathcal{F}}}}}}}}}}$	er <b>o</b> n to the	÷				
6.	A rectangular beam loaded tra	ansversely, the r	naximum compre	ssive stress develops at	•				
	(A) Bottom fibre	<b>(B)</b>	Neutral axis						
	(C) Top fibre	<b>(D)</b>	None of these	3 Top 385					

<b>7.</b>	Test	most suitable for measu	ring works	bility	of concrete of v	ery low workability	is is		
	(A)	Slump test		<b>(B)</b>	Compaction fa	· · · · · · · · · · · · · · · · · · ·			
. <b>%</b> *5	(C)	Vee – Bee test	(C) - 1 - 1 - 1	(D)	None	# 3 m			
8.	The	supportive foundation st	ructure for	many	columns provid	led over a slab is ca	lled as		
	(A)	Strip footing		<b>(B)</b>	Grillage footing	ng			
	(C)	Raft footing	•	<b>(D)</b>	Combined foo	ting			
9.	King	g post is provided in whi	ch form of	roofin	g system ?		and the second		
	(A)	Flat roof	· 1 (4)	<b>(B)</b>	Lean to roof	en e			
	(C)	Sloped roof	10.78	(D)	Gable roof				
			100			en e			
10.	Sepa	aration of ingredients fro	m concrete	durin	g transportation	is called			
	(A)	Segregation	(%) [18]	<b>(B)</b>	Creep	And of	A.		
	(C)	Shrinkage		(D)	Bleeding		* * * * * * * * * * * * * * * * * * *		
					• •				
11.	In the Brick Masonry the ideal combination for a strong brick is								
	(A)	Weak mortar		<b>(B)</b>	Strong mortar				
	(C)	Medium mortar	4,1	(D)	None of these	en e			
						9v. 10y			
12.	Dire	ct ranging is possible on	ly when the	e end s	stations are				
	(A)	Close to each other		<b>(B)</b>	Not more than	100m	e di j		
	(C)	Mutually intervisible		(D)	Located at high	hest point in the sea	l		
		;	121			- · · ·			
13.	The the c	curve composed of two curve is known as			radii having the	eir centres on oppo	site side of		
	(A)	Simple curve		<b>(B)</b>		rve	*		
	(C)	Reverse curve	· Aprel	<b>(D)</b>	Transition curv	ve Ab Ay			

14.	A cl	inometer is used for	tar		and the area of the second	- 1 - F <sub>19</sub> .
	(A)	Setting out right angles				. *
	<b>(B)</b>	Defining natural features	1 1 x x			
	(C)	Measuring angle of slope				
	(D)	Correcting the line of collimation				
			+ - <b>y</b>			· f
<b>15.</b>	A ne	gative declination shows that the m	agneti	ic meridian is to th	<b>e</b>	
	(A)	Eastern side of the true meridian	4 1			
	<b>(B)</b>	Northern side of the true meridian	5			
٠	(C)	Southern side of the true meridian				
	(D)	Western side of the true meridian	7. 4°	ggyr gwel y de gan a gan a Gan a gan a ga	Temporal (* 1841)	
<b>16.</b>	The	fundamental principles of surveying				r
	(A)	Lower to higher	<b>(B)</b>	Higher to lower	The state of the s	( ur
	(C)	Part to whole	(D)	Whole to part		
48	noi.		:	1	the stage of the	*
17.		centre of gravity of volume of liquid	a aisp	naced is		
	(A)	Centre of pressure		· ·	W mil 28	
	(B)	Centre of Buoyancy				
	(C)	Metacentre Contro of crovity		en e	on the state of the second	· ·
	(D)	Centre of gravity			400	
18.	An i	ideal fluid is		$\mathbf{v}_{i}$		
	(A)	One which obeys Newton's Law			$(\boldsymbol{I}^{(n)}, \boldsymbol{A}^{(n)}, A$	•.
	<b>(B)</b>	One which satisfies continuity equ	ation			
	(C)	Flows through pipes with least frie	ction	3 4 th		
	(D)	Frictionless & incompressible			at the second	
		en e	1.20		ing the second s	
19.	The	pressure at a point 4mt below the fr	ee wa	iter surface is		
	(A)	19.24 kPa	<b>(B)</b>	29.24 kPa		
	(C)	39.24 kPa	(D)	49.24 kPa		•
		Space P	or Ro	ngh Work		
		. •		<del>-</del>		

20.	The fluid	position of centre of pressure on a	plane	surface immersed vertically in static mass	of
	(A)	Above the centroid	<b>(B)</b>	Below the centroid and wat fig.	
	` ,	At the centroid	(D)		
	(C)	At the centroid	(D)		
21.	The	speed of a pressure wave through a	nine (	depends upon	
	(A)	Length of the pipe	(B)	Viscosity of fluid	
	(C)	Bulk modulus	(D)	Pressure in the pipe	
	(0)	Durk modulus	(D)	riessure in the pipe	
22.	The distr	maximum deflection of a fixed be ibuted over the whole span, is	eam o	f length 'I' carries a total load 'W' uniform	ly
	(A)	WI <sup>3</sup> / 96EI	<b>(B)</b>	WI <sup>3</sup> / 196EI	
	(C)	_		WI <sup>3</sup> / 384EI	
				ECC 100 g	
23.	A th	ree hinged arch is	.4	기계 (1997년) 1일 전 (1997년) 1일 (1997년 1987년 - 1일 (1997년) 1일	
	(A)	Bent beam	( <b>B</b> )	Determinate structure	."
	(C)	Indeterminate structure	(D)	None of these	
				15 - 161	
24.	A si equa	mply supported beam carrying UI tions:	OL thr	roughout can be analysed using the following	ıg
	(A)	$\sum H = 0 \& \sum V = 0$	<b>(B)</b>	$\sum \mathbf{H} = 0 \& \sum \mathbf{M} = 0$	
	(C)	$\sum V = 0 \& \sum M = 0$	(D)	None of these	
				en e	
25.	Wha	t is the difference between Oscillat	ion an	d Vibration?	
	(A)	Both are same		$\phi = \phi \circ $	
	<b>(B)</b>	Oscillation represents rigid body,	Vibrat	tion represents deformable body	
	(C)	Oscillation represents deformable			•
	(D)	None of the above	• /	·	
<del>~</del>		Q D	D	ıgh Work	
		30900 E	er KNU	MIN VY CHTK	

26.	Acco	ording to IS:456:2000, the minim	num eccei	ntricity for compression	members in r	no case
	(A)	Shall not exceed 20mm	1 × 1			
	<b>(B)</b>	Shall not be greater than 30mm	<b>.</b> .			
	(C)	Shall be between 20 – 30mm				
	(D)	None of these				
27.	Whi	ch of the following types of rive	etted joints	is free from bending st	ress?	
	(A)	Lap joint				
	<b>(B)</b>	Butt joint with single cover pla	ate			
	(C)	Butt joint with double cover p	late	•		
	(D)	Zig zag joint				
28.	Pois	son's ratio for concrete ranges b	etween	Be & C		
	(A)	0.10 - 0.15	<b>(B)</b>	0.15 - 0.25		
	(C)	0.25 – 0.3	(D)	0.3 – 0.35		
29.	For !	long span beam design which d	esign crite	ria dominates ?		
	(A)	Design for B.M	<b>(B)</b>	Design for shear		
	(C)	Design for torsion	(D)	Design for deflection		
30.	Bea	ms and slabs constructed togeth	er is called	d as		
	(A)	Monolithic construction				
	<b>(B)</b>	Slip from construction				
	(C)	Precast construction			10 m	
	(D)	Rapid wall construction		And the first of the	on the Bar	
31.	As p	per IS:456:2000, the maximum	cement co	ntent for RCC members	s is	
	(A)	$200 \text{ kg/m}^3$	<b>(B)</b>	$300 \text{ kg/m}^3$	` <b>.</b>	
	(C)	$450 \text{ kg/m}^3$	(D)	550 kg/m <sup>3</sup>		
		Spe	ce For Ro	ugh Work

49.	Eco	nomical height of a dam is t	hat heig	ht, for	which	* .
	(A)	Cost per unit storage is mi	inimum			
	<b>(B)</b>	Benefit cost ratio is maxir	num			
	(C)	Net benefits are maximum	<b>1</b>		4. 421	
	(D)	None of these				
50.	Whi	ch source of water among t	he follov	wing i	s not a surface source?	
	(A)	River		<b>(B)</b>	Wells	1 W. 7
	(C)	Lakes		(D)	Ocean	. ,

51. The second moment of area of a rectangle having dimensions 'a' & 'b' with respect to its diagonal is

(A)  $\frac{1}{6} \{a^2b^2/(a+b)\}$ 

(B)  $\frac{1}{6} \{a^3b^3/(a^2+b^2)\}$ 

(C)  $\frac{1}{12} \{a^2b^2/(a+b)\}$ 

(D)  $\frac{1}{12} \{a^3b^3/(a^2+b^2)\}$ 

52. A cantilever beam is subjected to concentrated load of 2kN at the free end. The beam also carries a UDL of 5 kN/M over the entire length of 4m. The moment at the support is

(A) 16 kN - M

(B) 36 kN - M

(C) 24 kN - M

(D) 48 kN - M

53. If  $\sigma_x = 0$ ,  $\sigma_y = 0$ , and  $\tau_{xy} = 100$  MPa, the maximum shear stress in the element is

(A) 100 MPa

(B) 200 MPa

(C) 150 MPa

(D) Zero

54. If the length of the transition curve to be introduced between a straight and a circular curve of radius 500 m is 90 m, the maximum deflection angle to locate its function point is

(A) 1° 43' 0"

(B) 1° 43′ 18′′

(C) 1° 43′ 28″

(D) 1° 43′ 38″

55. For a curve of radius 100 m and normal chord 10 m the Rankine's deflection angle is

(A) 1° 25.95'

(B) 1° 35.95°

(C) 0° 25.95'

(D) 1° 45.95'

Identend (A) (C)	'A' respectively.  PL <sup>3</sup> /3EI and 2PL  PL <sup>3</sup> /24EI and PL  the water supply project	(B) (D) t, the diameter of to a fluid pressure (B) (D)	the main pipe used is 120 e of 0.8 MPa. Then Hoo	00 mm and thickness is p stress in the cylinder

The pipe is replaced by another pipe of things same, is  (A) 0.5 h (C) 8 h (D)  A trapezoidal channel with bottom width of discharge of 8 m³/sec with a flow depth of 1.5  (A) 0.066 (B) (C) 0.265 (D)  Velocity in a pipe of diameter 20mm is 2r velocity if the diameter is changed to 12 mm.  (A) 4 m/sec (B) (C) 5.5 m/sec (D)	(A) 0.5 h  (B) 4 h  (C) 8 h  (D) 32 h  A trapezoidal channel with bottom width of 3 m and side slope discharge of 8 m³/sec with a flow depth of 1.5m. Froude's number of to (A) 0.066  (B) 0.132  (C) 0.265  (D) 0.317  Velocity in a pipe of diameter 20mm is 2m/sec. For the same divelocity if the diameter is changed to 12 mm.  (A) 4 m/sec  (B) 2 m/sec

Deflection after construction of RCC slab should not exceed

(A)  $\frac{L}{250}$ 

(B)  $\frac{L}{150}$ 

(C)  $\frac{L}{350}$ 

(D)  $\frac{L}{450}$ 

A simply supported beam having span 'L' carries a UDL 'w' throughout the span. The maximum deflection is

(A)  $\frac{5}{48}$  (wL<sup>4</sup>/EI)

(B)  $\frac{5}{384}$  (wL<sup>3</sup>/EI)

(C)  $\frac{5}{48}$  (M<sub>max</sub>L<sup>2</sup>/EI)

(D)  $\frac{5}{48}$  (M<sub>max</sub>L/EI)

**63.** Flexural tensile strength of concrete as per IS 456:2000 is

(A)  $f_{cr} = 1.7 \sqrt{f_{ck}}$ 

 $(B) f_{cr} = 0.7 \sqrt{f_{ck}}$ 

(C)  $f_{cr} = 2.7 \sqrt{f_{ck}}$ 

(D)  $f_{cr} = 3.7 \sqrt{f_{ck}}$ 

A simply supported beam AB of length 'L' carries a concentrated load 'P' at an 64. intermediate point 'C'. If slope at 'A' is 0.75 times the slope at 'B', then the length of portion AC is equal to Fig. (B)  $\frac{4}{7}$ L  $\frac{6}{3}$   $\frac{6}{3}$   $\frac{1}{3}$   $\frac{1}{3}$   $\frac{1}{3}$ 

 $\frac{3}{4}$ L

(C)  $\frac{5}{7}$ L

(D)  $\frac{2}{7}$ L

In a Cantilever beam AB loaded by a load 'w' at B, the first half portion has flexural **65.** rigidity EI and second half portion has infinite flexural rigidity. The deflection and slope at mid point respectively is

- (A)  $\frac{5}{48}$  (wL<sup>3</sup>/EI) & 3wL<sup>2</sup>/8EI (B)  $\frac{1}{24}$  (wL<sup>3</sup>/EI) & 3wL<sup>2</sup>/8EI
- (C)  $\frac{1}{24}$  (wL<sup>3</sup>/EI) & wL<sup>2</sup>/8EI
- (D)  $(wL^3/8EI) \& 3wL^2/8EI$
