Ans. Also called cold blooded animals. Their body temperature changes according surrounding environment. These animals are less active.

- e.g. all invertebrates, fishes, amphibians, reptiles.
- 2. Write two functions of juxtaglomerular apparatus.

Ans. Functions:

- (i) Juxtaglomerular cells secretes Renin which through RAAS (Renin-Angiotensis Aldosterone System) help in absorption of Na⁺ from DCT and therefore increases Blood pressure.
- (ii) Its Macula densa cells act as chemorecptor feeding information to JG cells.
- 3. State two differences between red and white muscle.

Ans. Difference between Red & White Muscle.
