TRAINING FOR
PROFESSIONALS

Training For Professionals

Sponsored by:

Department of Information Technology
Ministry of Communication
& Information Technology
New Delhi

Project Objective

Information Technology has grown at an alarming pace in last decade. The software development tools and open source have become big buzz words of the modern era. Management is another field that has seen a huge demand among the corporate. Every professional needs to be a good manager, no matter what domain he/she comes from. A good knowledge of these fields, coupled with an impressive personality can make any professional excel in his/her field.

The condition in the Indian context is quite discouraging. Lack of knowledge leads to slow pace of development for the individual, the corporate and the country at large. This condition can be felt at the IT and ITES industry where there is an immediate shortage of trained professionals who can deliver quality work according to the needs of the industries.

Eventhough the requirement in the IT and ITES industry is massive, only 25% of the desirous students are able to get a professional training in these domains. This makes the rest 75% unemployable. The major problems in this field are:

- Inconsistent Foundation: Syllabus, curriculum and coverage are not complete. There is inadequate number of faculties.
- Lack of professional skills/life skills: People are unaware of team management skills, project management skills, etc.
- Technology: Syllabus is not appropriate. So students study obsolete things. Only 15% of these 25% people possess professional skills like communication skills, personality, project management etc. These mainly belong to the urban population. Their counterparts are mostly unemployed and require 3 times more effort.

ABV-IIITM Gwalior has taken a novel step in this regard. The institute is committed to provide high quality training to about 50 to 75 professionals per batch all around the country totaling to about 300 students. The course of the training has been carefully designed to ensure its applicability in the corporate. The 12 week programme will help in guiding the professionals all round the country for excellence in Technology and Management and to keep then updated about the latest developments.

The key objectives of the programme are:

- Offering suitable candidates to IT & ITES industry.
- Helping young graduates find job by inculcating IT and soft skills components through appropriate training.

The institute will endeavor attempts to secure the job of the participants. The programme however does not guarantee any employment and the participants would not be treated as students of the Institute. The rich and diverse course of the training would cover all the requirements of the individual. We have courses aiming at the all round development of the individual, which includes:

- Software Development
- Management Skills
- Corporate Training
- Personality development
