| 1. 4 | All of the following are features of prematurity in a neonate, except: |
|------------|--|
| | 1.0 |
| 1. | No creases on sole. |
| 2. | Abundant lanugo. |
| 3. | Thick ear cartilage. |
| 4. | Empty scrotum. |
| | |
| 2. A excep | A normally developing 10 month old child should be able to do all of the following ot: |
| 1. 2. | Stand alone. Play peek a boo. |
| 3. | Pick up a pellet with thumb and index finger. |
| 4. | Build a tower of 3-4 cubes. |
| 1 in | |
| 3. | The following are characteristic of autism except: |
| 3 | 2) { |
| 1 | Onset after 6 years of age. |
| 2. | Repetitive behaviour. |
| 3 | Delayed language development |

4. Severe deficit in social interaction.

| | The earliest indicator of response after starting iron in a 6- year-old girl with iron ency is: |
|--------|--|
| 1. | Increased reticulocyte count. |
| 2. | Increased hemoglobin. |
| 3. | Increased ferritin. |
| 4. | Increased serum iron. |
| featur | a 1 month old boy is referred for failure to thrive. On examination, he shows sees of congestive failure. The femoral pulses are feeble as compared to branchial s. The most likely clinical diagnosis is: |
| 1. | Congenital aortic stenosis. |
| 2. | Coarctation of aorta. |
| 3. | Patent ductus arteriosus. |
| 4. | Congenital aortoiliac disease. |
| (| 1 |
| 6. A | all of the following statements regarding subendocardinal infarction are true, except |
| | |
| 1. | These are multifocal in nature. |
| 2. | These often result from hypotension or shock. |

3. Epicarditis is not seen.

| | | 63 |
|-------------|--|------------------|
| 1. | Transmission may be as an Autosomal dominant trait. | -7.) |
| 2. | Majority of the case present with features of mitral regurgitation. | 1 |
| 3. | The value leaflets characteristically show myxomatous degeneration. | • |
| 4. Syndi | | |
| 8. T | The following diseases are associated with Epstein – Barr virus infection, | except: |
| 1. | Infectious mononucleosis. | |
| 2. | Epidermodysplasia verruciformis. | |
| 3. | Nasopharyngeal carcinoma. | |
| 4. | Oral Hairy leukoplakia | |
| | 1 | |
| 9. N | Megaloblastic anaemia due to folic acid deficiency is commonly due to: | |
| 1 | Inadequate dietary intake. | |
| 9 | | |
| 2. | Defective intestinal absorption. | |
| 3. | Absence of folic acid binding protein in serum. | |
| 4. | Absence of glutamic acid in the intestine. | www.examrace.com |

4. These may result in aneurysm.

7. All of the following are true for mitral valve prolapse, except :

| | 23 |
|-----|---|
| 1. | Histological grade of the tumour. |
| 2. | Stage of the tumour at the time of diagnosis. |
| 3. | Status of estrogen and progesterone receptors. |
| 4. | Over expression of p-53 tumour suppressor gene. |
| | |
| 11. | Smoking is generally not associated as a risk factor with: |
| 1. | Small cell carcinoma. |
| 2. | Respiratory bronchiolitis. |
| 3. | Emphysema. |
| 4. | Bronchiolitis obliterans organizing pneumonia. |
| 91 | |
| | The tumour, which may occur in the residual breast or overlying skin following local excision and radiotherapy for mammary carcinoma, is: |
| 3 | 2 (|
| | Leiomyosarcoma. |
| 2. | Squamous cell carcinoma. |
| 3. | Basal cell carcinoma. |
| 4. | Angiosarcoma. |

10. The most important prognostic factor in breast carcinoma is :

| 1. | Apocrine DCIS. | - (1) |
|---------------------------------|--|------------------|
| 2. | Neuroendocrine DCIS. | 1 |
| 3. | Well differentiated DCIS. | 2 |
| 4. | Comedo DCIS. | |
| 14. | Acinic cell carcinomas of the salivary gland arise most often in the : | |
| 1. | Parotid salivary gland. | |
| 2. | Minor salivary glands. | |
| 3.4. | Submandibular salivary gland. Sublingual salivary gland. | |
| 9 | | |
| 15. excej | All of the following statements regarding primary effusion lymphoma are tot: | rue |
| 1 | It generally presents in elderly patients. | |
| | | |
| 2. | There is often an association with HHV-8. | |
| 3. | The proliferating cells are NK cells. | |
| 4. | Patients are commonly HIV positive. | www.examrace.com |

13. The type of mammary ductal carcinoma in situ (DCIS) most likely to result in a palpable abnormality in the breast is :

| 16. | Mantle cell lymphomas are positive for all of the following, except : |
|-----|---|
| | |
| 1. | CD 23. |
| 2. | CD 20. |
| 3. | CD 5. |
| 4. | CD 43. |
| | |
| 17. | Fine needle aspiration cytology is not suitable for diagnosing: |
| | 44 |
| 1. | Tubercular lymphadenitis. |
| 2. | Papillary carcinoma thyroid. |
| 3. | Plasmacytoma. |
| 4. | Aneurymal bone cyst. |
| 2 | |
| 18 | All of the following immunohistochemical markers are positive in the neoplastic |
| | of granulocytic sarcoma, except: |
| (| |
| 1. | CD 45 RO. |
| 2. | CD 43. |
| 3. | Myeloperoxidase. |

| 19. B cell prolymphocytic leukemia patients differ from those with B cell chronic lymphocytic leukemia in : |
|---|
| 1. Presenting at a younger age. |
| 2. Having a lower total leucocyte count. |
| 3. Having prominent lymphadenopathy. |
| 4. Having a shorter survival. |
| 20. Which of the following statements is incorrect about pthisis bulbi? |
| 1. The intraocular pressure is increased. |
| 2. Calcification of the lens is common. |
| 3. Sclera is thickened. |
| 4. Size of the globe is reduced. |
| 21. Which one of the following statements is incorrect about Optic glioma? |
| |
| 1. Has a peak incidence in first decade. |
| 2. Arises from oligodendrocytes. |
| 3. Causes meningeal hyperplasia. www.examrace.com |

4. Lysozyme.

| 4. | Is associated with type I neurofirbromatosis. |
|-----|---|
| 22. | Which one of the following stromal dystrophy is a recessive condition? |
| 1. | Lattice dystrophy. |
| 2. | Granular dystrophy. |
| 3. | Macular dystrophy. |
| 4. | Fleck dystrophy. |
| 23. | In which of the following conditions Parakeratosis most frequently occurs? |
| 1. | Actinic Keratoses. |
| 2. | Seborrheic keratoses. |
| 3. | Molluscum contagiosum. |
| 4. | Basal cell carcinoma. |
| 24. | Which one of the following is the most significant risk factor for development of |
| | ic carcinoma? |
| 1 | 10/ |
| 1. | Paneth cell metaplasia. |
| 2. | Pyloric metaplasia. |

www.examrace.com

3. Intestinal metaplasia.

| portal | hypertension? | -5% |
|--------|--|------------------|
| 1. | Chronic liver failure. | .) |
| 2. | Ascites. | |
| 3. | Upper gastrointestinal bleeding. | |
| 4. | Encephalopathy. | |
| 26. | Ethosuximide is used in the treatment of : | |
| 1. | Tonic-clonic seizure. | |
| 2. | Absence seizure. | |
| 3. | Myoclonic seizure. | |
| 4. | Simple partial seizure. | |
| 1 | 2 | |
| 27. | Which of the following statements is not true about etomidate? | |
| 1. | It is an intravenous anesthetic. | |
| 2. | It precipitates coronary insufficiency. | |
| 3. | It inhibits cortisol synthesis. | www.examrace.com |
| | | |

25. Which of the following is the most common presenting symptom of non-cirrhotic

4. Ciliated metaplasia.

| 4. | It causes pain at site of injection. |
|-----|---|
| 28. | Which one of the following antibacterials should not be used with d-tubocurarine? |
| 1. | Norfloxacin. |
| 2. | Streptomycin. |
| 3. | Doxycycline. |
| 4. | Cefotaxime. |
| 29. | Which one of the following drugs is an antipseudomonal penicillin? |
| 1. | Cephalexin. |
| 2. | Cloxacillin. |
| 3. | Piperacillin. |
| 4. | Dicloxacillin. |
| 1 | 7) { |
| 30. | The following statements regarding benzodiazephines are true except: |
| 1. | Binds to both GABAA and GABAB receptors. |
| 2. | They have active metabolites. |

www.examrace.com

3. Decreases nocturnal gastric secretion in human being.

| 4. Extensively metabolized by CYP enzymes. |
|---|
| 31. One of the following statements regarding mycophenolate mofetil is incorrect: |
| 1. It is a prodrug. |
| 2. It is a selective uncompetitive and reversible inhibitor of inosine monophosphate dehydrogenase. |
| 3. It also inhibits calcineurin. |
| 4. Selectivity inhibits lymphocyte proliferation. |
| 44 /1715 |
| 32. All of the following mechanisms of action of oral contraceptive pill are true, except : |
| 1. Inhibition of ovulation. |
| 2. Prevention of fertilization. |
| 3. Interference with implantation of fertilized ovum. |
| 4. Interference with placental functioning. |
| 4. Interference with pracental functioning. |
| 33. Which one of the following drugs does not interfere with folic acid metabolism? |
| 1. Phenytoin. |
| 2. Gabapentin. |

| 3. | Phenobarbitone. |
|--------------|--|
| 4. | Primidone. |
| 34. | Which one of the following drugs causes constipation? |
| 1. | Propranolol. |
| 2. | Verapamil. |
| 3. | Nitroglycerin. |
| 4. | Captopril. |
| 35. glauc | Which of the following drugs is not used topically for treatment of open angle oma: |
| 1. | Latanoprost. Brimonidine. |
| - | A A |
| | Acetazolamide. |
| 4. | Dorzolamide. |
| | Concomitant administration of clonazepam with which of the following pileptic drug can precipitate absence status? |

1. Sodium valproate.

| 2. Phenobarbitone. | |
|--|--|
| 3. Carbamazepine. | |
| 4. Phenytoin. | |
| 37. Which one of the following agents has been associated with hemorrhagic stroke? | |
| 1. Phenylpropanolamine. | |
| 2. Terfenadine. | |
| 3. Quinidine. | |
| 4. Fenfluramine. | |
| 38. All of the following are therapeutic uses of Penicillin G, except : | |
| Bacterial meningitis. | |
| 2. Rickettsial Infection. | |
| 3. Syphilis. | |
| 4. Anthrax. | |
| 39. All of the following are major complications of massive transfusion, except: | |
| 1. Hypokalemia. | |

2. Hypothermia. www.examrace.com

| 3. Hypomagnesemia. | |
|--|--|
| 4. Hypocalcemia. | |
| (5) | |
| 40. Which one of the following muscle relaxant has the maximum duration of action? | |
| -34 -30 | |
| 1. Atracurium. | |
| 2. Vecuronium. | |
| 3. Rocuronium. | |
| 4. Doxacurium. | |
| 41. Which enzyme is inhibited by Aminophylline? | |
| 1. Monoamine Oxidase. | |
| 2. Alcohol dehydrogenase. | |
| 3. Phjosphodiesterase. | |
| 4. Cytochrome P-450. | |
| | |
| 42. Which one of the following local anaesthetics belongs to the ester group? | |
| 1. Procaine. | |

www.examrace.com

2. Bupivacaine.

| 3. | Lignocaine. |
|----------|---|
| 4. | Mepivacaine. |
| 43. | The following are the benozodiazepines of choice in elderly and those with liver ase, except: |
| | 14 700 |
| 1. | Lorazepam. |
| 2. | Oxazepam, |
| 3. | Temazepam. |
| 4. | Diazepam. |
| 44. | Which one of the following agents sensitises the myocardium to catecholamines? |
| 1. 2. | |
| 3. | Halothane. |
| 4. | Propofol. |
| 45. | Which of the following is the muscle relaxant of choice in renal failure? |
| 1. | Rapacurium |

| 2. Pancuronium |
|--|
| 3. Atracurium |
| 4. Rocuronium |
| 46. Ovulation is primarily caused by preovulatory surge of : |
| 1. Estradiol. |
| 2. Luteinizing hormone. |
| 3. Progesterone. |
| 4. Follicle stimulating hormone. |
| 47. Marta Chana Chana Chana Mallatan I and in the maintain the maintai |
| Most afferent fibers from the lateral geniculate nucleus terminate in the primary visual cortex in : Layer 1. Layer 2 & 3. Layer 4. Layer 5 & 6. |
| 48. The blobs of the visual cortex are associated with: |
| |

1. Ocular dominance.

| 2. Orientation. |
|---|
| 3. Color processing. |
| 4. Saccadic eye movements. |
| 49. The parvocellular pathway, from the lateral geniculate nucleus to the visual cortex, carries signals for the detection of : |
| 1. Movement, depth and flicker. |
| 2. Color vision, shape and fine details. |
| 3. Temporal frequency. |
| 4. Luminance contrast. |
| 50. A pilot in Sukhoi aircraft is experiencing negative G. Which of the following |
| physiological events will manifest in such situation? |
| 1. The hydrostatic pressure in veins of lower limb increases. |
| 2. The cardiac output decreases. |
| 3. Black out occurs. |
| 4. The cerebral arterial pressure rises. |
| 4. The cerebral afterial pressure rises. |
| |
| 51. In human being, the least useful physiological response to low environmental temperature is : |

| 3. Release of thyroxine. |
|--|
| 4. Piloerection. |
| 52. The cell bodies of orexinergic neurons are present in: |
| 1. Locus coeruleus. |
| 2. Dorsal raphe. |
| 3. Lateral hypothalamic area. |
| 4. Hippocampus. |
| 53. The tubuloglomerular feedback is mediated by: |
| |
| 1. Sensing of Na+ concentration in the macula densa. |
| 2. Sensing of Cl+ concentration in macula densa. |
| 3. Sensing NaCl concentration in the macula densa. |
| 4. Opening up of voltage gated Na+ channels in afferent arteriole. |
| |
| 54. The prime driving force for counter current multiplier system is : |

Shivering.

Vasoconstriction.

| 2. | Reabsorption of Na+ in thick ascending limb. |
|-----|---|
| 3. | Action of ADH via aquaporin channels. |
| 4. | Urea recycling. |
| 55. | Which of the following organs is not involved in calcium homeostasis? |
| 1. | Kidneys. |
| 2. | Skin. |
| 3. | Intestines. |
| 4. | Lungs. |
| 56. | Testosterone production is mainly contributed by: |
| 71 | Leydig cells. |
| 2. | Sertolie cells. |
| 3. | Seminiferous tubules. |
| 4. | Epididymis. |
| | |
| 57. | Which of the following secretions has a very high pH? |

1. Medullary hperosmolarity.

| 1. Gastric juice. |
|---|
| 2. Pancreatic juice. |
| |
| 3. Bile in gall bladder. |
| 4. Saliva. |
| |
| 58. The maintenance of posture in a normal adult human being depends upon: |
| 30 60 |
| 1. Integrity of reflex are. |
| |
| 2. Muscle power. |
| 3. Type of muscle fibres. |
| 4. Joint movements in physiological range. |
| -14 |
| 59. The first reflex response to appear as spinal shock wears off in humans is: |
| · 616 |
| |
| 1. Tympanic reflex. |
| 2. Withdrawal reflex. |
| 3. Neck righting reflex. |
| 4. Labyrinthine reflex |
| 7 0/ |
| |
| 60 The hyperkinetic features of the Huntington's disease are due to the loss of |

| 1. Nigrostriatal dopaminergic system. |
|--|
| 2. Intrastriatal cholinergic system. |
| 3. GABA-ergic and choloinergic system. |
| 4. Intrastriatal GABA-ergic and cholinergic system. |
| 61. All of the following are part of the treatment of Lithium toxicity, except: |
| 1. Treating dehydration. |
| 2. Ingestion of polystyrene sulfonate. |
| 3. Hemodialysis. |
| 4. Using an antagonist. |
| 62. All are side effects of Clozapine except:1. Granulocytopenia. |
| 2. Seizures. |
| 3. Sedation. 4. Extrapyramidal side effects |
| 63. Pavlov's experiment is an example of: |
| |

1. Operant conditioning.

| 2. | Classical conditioning. |
|-----|--|
| 3. | Learned helplessness. |
| 4. | Modelling. |
| | -21 |
| 64. | Bright light treatment has been found to be most effective in treatment of: |
| | 20 63 |
| 1. | Anorexia Nervosa. |
| 2. | Seasonal Affective Disorder. |
| 3. | Schizophrenia. |
| 4. | Obsessive Compulsive Disorder. |
| | -Marie Contract of the Contrac |
| 65. | The most common side effect reported with treatment with haloperidol is: |
| 1 | Hypotension. |
| 9 | |
| 2. | Akathisia. |
| 3. | Dryness of mouth. |
| 4. | Tic disorder. |
| - 3 | 13/ |
| | Mutism and akinesis in a person, who appears awake and even alert, is best abed as: |

| 1. | Twilight State. |
|---------------------------------|---|
| 2. | Oneroid state. |
| 3. | Stupor. |
| 4. | Delirium. |
| 67. | Loosening of association is an example of : |
| 1. | Formal thought disorder. |
| 2. | Schneiderian first rank symptoms. |
| 3.4. | Perseveration. Concrete thinking. |
| 68. of: | Intense nihilism, somatization and agitation in old age are the hallmark symptoms |
| 1 | Involutional melancholia. |
| 2. | Aty[pical depression. |
| 3. | Somatized depression |
| 4. | Depressive stupor. |
| | |
| 69. | Rivastigmine and Donepezil are drugs used predominantly in the management of: |

| 1. | Depression. |
|-----|---|
| 2. | Dissociation. |
| 3. | Delusions. |
| 4. | Dementia. |
| | |
| 70. | All of the following are associated with better prognosis in schizophrenia, except: |
| 1. | Late onset. |
| 2. | Married. |
| 3. | Negative symptoms. |
| 4. | Acute onset. |
| | -14 |
| 71. | The following features are true for Tetralogy of Fallot, except: |
| E L | Ventricular septal defect. |
| 2. | Right ventricular hypertrophy. |
| 3. | Atrial septal defect. |
| 4. | Pulmonary stenosis. |
| -9 | |
| 72. | Which of the following statements is true regarding testicular tumours? |

| 2. Bilateral in upto 10% cases. |
|--|
| 3. Teratomas are more common than seminomas. |
| 4. Usually present after 50 years of age. |
| 73. The most common retrobulbar orbital mass in adults is: |
| 1. Neurofibroma. |
| 2. Meningioma. |
| 3. Cavernous haemangioma. |
| 4. Schwannoma. |
| 74. In which of the following conditions left atrium is not enlarged: |
| Ventricular septal defect. |
| 2. Atrial septal defect. |
| 3. Aorto-pulmonary window. |
| 4. Patent ductus arteriosus. |
| 75. Expansile lytic osseous metastases are characteristic of primary malignancy of : |

1. Are embryonal cell carcinomas in 95% of cases.

| 3. Breast. |
|--|
| 4. Prostate. |
| 76. Which is the objective sign of identifying pulmonary plethora in a chest radiograph? |
| 1. Diameter of the main pulmonary artery > 16mm. |
| 2. Diameter of the left pulmonary artery > 16mm. |
| 3. Diameter of the descending right pulmonary artery > 16mm. |
| 4. Diameter of the descending left pulmonary artery > 16mm. |
| 77. The most accurate investigation for assessing ventricular function is : |
| 1. Multislice CT. |
| 2. Echocardiography. |
| 3. Nuclear scan. |
| 4. MRI. |
| 78. The most important sign of significance of renal artery stenosis on an angiogram is: |
| A percentage diameter stenosis > 70%. |

1. Kidney.

2. Bronchus.

| 2. Presence of collaterals. | |
|--|----|
| 3. A systolic pressure gradient > 20mm Hg across the lesion. | |
| 4. Post stenotic dilatation of the renal artery. | |
| 79. The MR imaging in multiple sclerosis will show lesions in: | |
| 1. White matter. | E. |
| 2. Grey matter. | |
| 3. Thalamus. | |
| 4. Basal ganglia. | |
| 80. The most common location of hypertensive intracranial haemorrhage is : | |
| | |
| 1. Subarachnoid space. | |
| 2. Basal ganglia. | |
| 3. Cerebellum. | |
| 4. Brainstem. | |
| | |
| 81. Which of the following causes rib-notching on the chest radiograph? | |

1. Bidirectional Glem shunt.

| 4. Coarctation of aorta. |
|--|
| 82. The most sensitive imaging modality to detect early renal tuberculosis is: |
| 1. Intravenous urography. |
| 2. Computed tomography.3. Ultrasound. |
| 4. Magnetic Resonance Imaging. |
| 83. All of them use non-ionizing radiation, except: |
| 1. Ultrasonography. |
| 2. Thermography. |
| 3. MRI. |
| 4. Radiography. |
| 84. Mixed tumours of the salivary glands are: |
| 1. Most common in submandibular gland. |

Modified Blalock-Taussing shunt.

3. IVC occusion.

| 4. Associated with calculi. |
|--|
| 85. In which of the following types of breast carcinoma, would you consider biopsy of opposite breast? |
| Adenocarcinoma-poorly differentiated. Medullary carcinoma. Lobular carcinoma. |
| 4. Comedo carcinoma. |
| A malignant tumour of childhood, that metastasizes to bones most often, is: Wilm's tumour. Neuroblastoma. Adrenal gland tumours. Granulosa cell tumour of ovary. |
| |

www.examrace.com

Usually malignant.

1. Pre Pyloric region.

Most common in parotid gland.

2.

| 2. | Pylorus. |
|----------------|--|
| 3. | Body. |
| 4. | Fundus. |
| 88. criteri | With regard to the malignant behaviour of leiomysarcoma, the most important ion is : |
| 1. | Blood vessel penetration by tumour cells. |
| 2. | Tumour cells in lymphatic channels. |
| 3. | Lymphocyte infiltration. |
| 4. | The number of mitoses per high power field. |
| 89. | The most radiosensitive tumour among the following is: |
| 48 L/ | Bronchogenic carcinoma. |
| 2. | Carcinoma parotid. |
| 3. | Dysgerminoma. |
| 4 | OSteogenic sarcoma. |
| 9 | |
| | In a suspected of ovarian cancer, imaging work-up is required for all of the ving information, except: |

| Detection of adenexal lesion. Characterization of the lesion. Staging. Assess resectability. In which of the following age group Myelodysplastic Syndromes (MDS) are most common? 2-10. 15-20. 25-40. >50. A patient with leukemia on chemotheraphy develops acute right lower abdominal pain associated with anemia, thrombocytopenia and leukopenia. Which of following is the clinical diagnosis? Appendictis. Leukemic colitis. Perforation peritonitis. Neutropenic colitis. Neutropenic colitis. | | |
|---|--------|--|
| Staging. Assess resectability. In which of the following age group Myelodysplastic Syndromes (MDS) are most common? 2-10. 15-20. 25-40. >50. A patient with leukemia on chemotheraphy develops acute right lower abdominal pain associated with anemia, thrombocytopenia and leukopenia. Which of following is the clinical diagnosis? Appendictis. Leukemic colitis. Perforation peritonitis. | 1. | Detection of adenexal lesion. |
| Assess resectability. In which of the following age group Myelodysplastic Syndromes (MDS) are most common? 2-10. 15-20. 25-40. >50. A patient with leukemia on chemotheraphy develops acute right lower abdominal pain associated with anemia, thrombocytopenia and leukopenia. Which of following is the clinical diagnosis? Appendictis. Leukemic colitis. Perforation peritonitis. | 2. | Characterization of the lesion. |
| In which of the following age group Myelodysplastic Syndromes (MDS) are most common? 2-10. 15-20. 25-40. >50. 92. A patient with leukemia on chemotheraphy develops acute right lower abdominal pain associated with anemia, thrombocytopenia and leukopenia. Which of following is the clinical diagnosis? Appendictis. Leukemic colitis. Perforation peritonitis. | 3. | Staging. |
| 2-10. 15-20. 25-40. >50. 92. A patient with leukemia on chemotheraphy develops acute right lower abdominal pain associated with anemia, thrombocytopenia and leukopenia. | 2. 15-20. 25-40. >50. 92. A patient with leukemia on chemotheraphy develops acute right lower abdominal pain associated with anemia, thrombocytopenia and leukopenia. Which of following is the clinical diagnosis? 1. Appendictis. 2. Leukemic colitis. 3. Perforation peritonitis. | | |
| 25-40. >50. A patient with leukemia on chemotheraphy develops acute right lower abdominal pain associated with anemia, thrombocytopenia and leukopenia. Which of following is the clinical diagnosis? Appendictis. Leukemic colitis. Perforation peritonitis. | 1. | 2-10. |
| 4. >50. 92. A patient with leukemia on chemotheraphy develops acute right lower abdominal pain associated with anemia, thrombocytopenia and leukopenia. Which of following is the clinical diagnosis? 1. Appendictis. 2. Leukemic colitis. 3. Perforation peritonitis. | 2. | 15-20. |
| 92. A patient with leukemia on chemotheraphy develops acute right lower abdominal pain associated with anemia, thrombocytopenia and leukopenia. Which of following is the clinical diagnosis? 1. Appendictis. 2. Leukemic colitis. 3. Perforation peritonitis. | 3. | 25-40. |
| pain associated with anemia, thrombocytopenia and leukopenia. Which of following is the clinical diagnosis? 1. Appendictis. 2. Leukemic colitis. 3. Perforation peritonitis. | 4. | >50. |
| 2. Leukemic colitis.3. Perforation peritonitis. | pain a | associated with anemia, thrombocytopenia and leukopenia. Which of following is |
| Leukemic colitis. Perforation peritonitis. | | 1 |
| | 2. | Leukemic colitis. |
| 4. Neutropenic colitis. | 9 | |
| | 4. | Neutropenic colitis. |

| 1. Ultrasonic waves. | |
|--|--------------------------------------|
| 2. Cryotherapy. | 31-12 |
| 3. Alcohol. | 20 700 |
| 4. Radiofrequency. | 15 50 |
| 94. All of the following radioisotopes are use | d as systemic radionucleide, except: |
| 1. Phosphorus-32. | CTT! |
| 2. Strontium-89. | |
| 3. Iridium-192. | |
| 4. Samarium-153. | |
| 95. Phosphorous-32 emits: | |
| 32 | |
| 1. Beta particles. | |
| 2. Alfa particles. | |
| 3. Neutrons. | |
| 4. X-rays. | |

93. All of the following modalities can be used for in-situ ablation of liver secondaries,

except:

| 96. | The ideal timing of radiotherapy for Wilms Tumour after surgery is: |
|-----------------|--|
| 1. | Within 10 days. |
| 2. | Within 2 weeks. |
| 3. | Within 3 weeks. |
| 4. | Any time after surgery. |
| 97. | The percentage of pulmonary emboli, that proceed to infraction, is approximately: |
| 1. | 0-5%. |
| 2. | 5-15%. |
| 3. | 20-30%. |
| 4. | 30-40%. |
| 98. 1. 2. | Which of the following is used in the treatment of differentiated thyroid cancer: 131I. 99mTc. 32p. |
| <i>3</i> . 4. | 131I-MIBG. |

| | Which one of the following imaging techniques gives maximum radiation exposure patient? |
|------|---|
| 1. | Chest X-ray. |
| 2. | MRI. |
| 3. | CT scan. |
| 4. | Bone scan. |
| 100. | Which one of the following has the maximum ionization potential? |
| 1. | Electron. |
| 2. | Proton. |
| 3. | Helim ion. |
| 4. | Gamma(ï□§) – Photon. |
| 1 I | |
| 101. | Which of the following is not a major criteria for dignosis of multiple myeloma? |
| 1 | v) / |
| 1 | Lytic bone lesions. |
| 2. | Plasmacytoma on tissue biopsy. |
| 3. | Bone marrow plasmacytosis > 30% |
| 4. | †M†M†Spike > 3g% for 1g G, >2g% for 1g A. |

| 102. | The treatment of choice for squamous cell anal cancer is: |
|------|--|
| 1. | Abdomino perennial resection. |
| 2. | Laser fulgaration. |
| 3. | Chemoradiotherapy. |
| 4. | Platinum based chemotheraphy. |
| 103. | The magnification obtained with a direct ophthalmoscope is: |
| 1. | 5 times. |
| 2. | 10 times. |
| 3. | 15 times. |
| 4. | 20 times. |
| 104. | The average distance of the fovea from the temporal margin of the optic disc is: |
| E, | 1 disc diameter. |
| 2. | 2 disc diameter. |
| 3. | 3 disc diameter. |
| 4 | 4 disc diameter |

| 105. | The most common cause of vitreous naemorrnage in adults is: |
|------|--|
| | |
| 1. | Retinal hole. |
| 2. | Trauma. |
| 3. | Hypertension. |
| 4. | Diabetes. |
| | 13 55 |
| 106. | The retina receives its blood supply from all except: |
| 1. | Posterior ciliary artery, |
| 2. | Central retinal artery. |
| 3. | Retinal arteries. |
| 4. | Plexus of zinn & Haller arteries. |
| | |
| 107. | Which drug can cause macular toxicity when given intravitreally? |
| | |
| h, | Gentamycin. |
| 2. | Vancomycin. |
| 3. | Dexamethasone. |
| 4. | Ceftazidime. |

| 108. | Typically bilateral inferior lens subluxation of the lens is seen in : |
|---------------------------------|---|
| 1. | Marfan's syndrome. |
| 2. | Homocystinuria. |
| 3. | Hyperlusinaemia |
| 4. | Ocular trauma. |
| 109. | Which of the following antiglaucoma medications can cause drowsiness? |
| 1. | Latanoprost. |
| 2. | Timolol. |
| 3.4. | Brimonidine, Dorzolamide. |
| | Which of the following is the drug of choice for treatment of corneal ulcers caused amentous fungi? |
| 5 | Itraconazole. |
| 2. | Natamycin. |
| 3. | Nystatin. |
| 4. | Fluconazole. |

| 111. sulph | Which of the following medications is contraindicated in patients with allergy to onamides? |
|---------------|--|
| | -24 |
| 1. | Levobunolol. |
| 2. | Bimatoprost. |
| 3. | Brinzolamide. |
| 4. | Brimonidine. |
| | |
| 112. intrao | In which of the following uveitic conditions is it contraindicated to put in an ocular lens after cataract surgery? |
| | and the same of th |
| | |
| 1. | Fuch's heterochromic cyclitis. |
| 2. | Juvenile rheumatopid arthritis. |
| 3. | Psoriatic arthritis. |
| 4. | Reiter's syndrome. |
| 1 | |
| (| 1 |
| 113. diabet | A case of Non-Insulin dependent diabetes mellitus (NIDDM) with a history of tes for one year should have an ophthalmic examination: |
| 3 | |
| 1. | As early as feasible. |
| 2. | After 5 years. |
| 3. | After 10 years. |

4. Only after visual symptoms develop.

| 114. | SAFE Strategy is recommended for the control of? |
|-----------------|---|
| 117. | SATE Strategy is recommended for the control of : |
| | |
| 1. | Trachoma. |
| | |
| 2. | Glaucoma. |
| 3. | Diabetic retinopathy. |
| 4. | Cataract. |
| | |
| | 1 100(00) POP |
| 115. (at vis | As per the 1986-89 NPCB survey, what was the prevalence of blindness in India sual acuity <6/60 in better eye)? |
| | 44 (1715) |
| | 41 2 |
| 1. | 1.38% |
| | 4.6 |
| 2. | 1.49% |
| 3. | 1.72% |
| 4. | 1.8% |
| 1 | |
| 1 | |
| | Under the National Programme for Control of Blindness, who is supposed to |
| condu | act the vision screening of school students? |
| - | 1 4 / |
| 1. | School teachers. |

Medical officers of health centres.

3. Ophthalmologists.

| 4. | Health assistants. |
|------|---|
| 117. | According to the World Health Organization, the definition of blindness is: |
| 1. | Visual acuity <6/60 in the better eye with available correction. |
| 2. | Visual acuity <3/60 in the better eye with available correction. |
| 3. | Visual acuity <6/60 in the better eye with best correction. |
| 4. | Visual acuity <3/60 in the better eye with best correction. |
| 118. | The most common cause of ocular morbidity in India is : Cataract. |
| Gram | Conjunctivitis. Refractive error. Trachoma. A vitreous aspirate from a case of metastatic endophthalmitis on culture yields positive round to oval cells, 12-14ï in size. The aspirate on Gram staining shows esence of pseudohyphae. Which of the following is the most likely aetiological |

2. Rhizopus. www.examrace.com

1. Aspergillus.

| 3. | Candida. |
|------|---|
| 4. | Fusarium. |
| 120. | The most common malignancy found in Marjolin's ulcer is: |
| 1. | Basal cell carcinoma. |
| 2. | Squamous cell carcinoma. |
| 3. | Malignant fibrous histiocytoma. |
| 4. | Neurotrophic malignant melanoma. |
| 121. | Mycotic aneurysm is an aneurysm infected because of : |
| 1. | Fungal infection. |
| 2. | Blood borne infection (intravascular) |
| 3. | Infection introduced from outside (extravascular) |
| 4. | Both intravascular & extravascular infection. |
| | |
| 122. | The procedure of choice for the evaluation of an aneurysm is: |
| | |
| 1. | Ultrasonography. |
| | |

www.examrace.com

2. Computed tomography.

| 3. Magnetic resonance imaging. |
|---|
| 4. Arteriography. |
| 123. The most common cause of acquired arteriovenous fistuala is: |
| Bacterial infection. Fungal infection. Blunt trauma. Penetrating trauma. |
| Laryngocele arises as a herniation of laryngeal mucosa through the following membrance: Thyrochyoid. Criciothyroid. Crico-tracheal. Crisosternal. |
| Can present with Charcot's Triad. |

| 2. | Are suggested by a bile duct diameter >6mm of ultrasound. |
|-----------------------|--|
| 3. | ERCP, sphincterotomy and balloon clearance is now the standard treatment. |
| 4. after 3 | When removed by exploration of the common bile duct the T-tube can be removed days. |
| 126. | Which of the following colonic polyps is not pre-maligant? |
| 1. | Juvenile polyps. |
| 2. | Hamartomatous polyps associated with Peutz-Jeghers syndrome. |
| 3. | Villous adenomas. |
| 4. | Tubular adenomas. |
| 127. days a is: | A patient of post-cholecystectomy biliary stricture has undergone an ERCP three ago. Following this she has developed acute cholangitis. Th most likely organism |
| (1 | Escherichia coli. |
| 2. | Bacillus fragilis. |
| 3. | Streptococcus viridans. |
| 4. | Pseudomonas aerogenosa. |
| 9 | |
| 128. which | Biliary stricture developing after Laparascopic cholecystectomy usually occurs at a part of the common bile duct? |

| 1. | Upper. |
|---------------|---|
| 2. | Middle. |
| 3. | Lower. |
| 4. | All sites with equal frequency. |
| 129. suppu | Apart from Escherichia Coli, the other most common organism implicated in acute trative bacterial peritonitis is: |
| 1. | Bacteroides. |
| 2. | Klebsiella |
| 3. | Peptostreptococcus. |
| 4. | Pseudomonas. |
| 130. | The treatment of choice for the management of carcinoma of the anal canal is: |
| (1. | Abdomino perineal resection. |
| 2. | Primary radiotherapy. |
| 3. | Combined radio-and chemotheraphy. |
| 4. | Neoadjuvant chemotherapy and local excision. |
| | |

The following statements about thyroglossal cyst are true, except:

| 1. | Frequent cause of anterior midline neck masses in the first decade of life. |
|------|--|
| 2. | The cyst is located within 2 cm of the midline. |
| 3. | Incision and Drainage is the treatment of choice. |
| 4. | The swelling moves upwards on protrusion of tongue. |
| 132. | Which of the following is not a preferred site for planning vascular access for enance haemodialysis? |
| mami | enance naemodiarysis ? |
| 1. | Non-dominant extremity. |
| 2. | Upper limb. |
| 3. | Radio-cephalic AV fistula. |
| 4. | Sapheno-femoral fistula. |
| | Which of the following drugs is not a part of the †Triple Therapy' nosuppression for post renal transplant patients? |
| N. | Cyclosporine. |
| 2 | Azathioprine. |
| 3. | FK 506. |
| 4. | Prednisolone. |

| 134. | Which of the following is not a component of Glasgow Coma Scale? |
|------|---|
| | |
| 1. | Eye opening. |
| 2. | Motor response. |
| 3. | Pupil size. |
| 4. | Verbal response. |
| 135. | Allen's test is useful in evaluating: |
| 1. | Thoracic outlet compression. |
| 2. | Presence of cervical rib. |
| 3. | Integrity of palmar arch. |
| 4. | Digital blood flow. |
| | 1 610 |
| 136. | Neointimal hyperplasia causes vascular graft failure as a result of hypertrophy of: |
| | |
| di. | Endothelial cells. |
| 2. | Collagen fibers. |
| 3. | Smooth muscle cells. |
| 4. | Elastic fibers. |
| | |

| 3. | Nontextile biologic. |
|------|--|
| 4. | Textile biologic. |
| 138. | Total score in Glasgow Coma Scale of a conscious person is : |
| 1. | 8 |
| 2. | 3 |
| 3. | 15 |
| 4. | 10 |
| 139 | Mycotic abscesses are due to: |
| 757. | Mycotic abscesses are due to. |
| (| |
| 1. | Bacterial infection |
| 2. | Fungal infection. |
| 3. | Viral infection. |
| -9 | |
| 4. | Mixed infection. |
| | |
| 140. | The most preferred approach for pituitary surgery at the present time is: www.examrace.com |

Nontextile synthetic.

Textile synthetic

| 3. | Transphenoidal. |
|------|---|
| 4. | Transcallosal. |
| 141. | The normal range of serum osmolality (in mOsm/L) is: |
| 1. | 270 to 285. |
| 2. | 300 to 320. |
| 3. | 350 to 375. |
| 4. | 200 to 250. |
| 142. | Which of the following is the most common type of Glial tumors? |
| 2 | |
| di. | Astrocytomas. |
| 2. | Medulloblastomas. |
| 3. | Neurofibromas. |
| 4. | Ependymomas. |
| | |
| 143. | Which of the following tumors is not commonly known to increase in pregwance?amrace.com |

Transcranial.

Tranethmoidal

| 2. | Pituitary adenoma. |
|---------------------------------|--|
| 3. | Meningioma. |
| 4. | Neurofibroma |
| 144. | The requirement of potassium in a child is: |
| 1. | 1-2 mEq/kg. |
| 2. | 4-7 mEq/kg. |
| 3. | 10-12 mEq/kg. |
| 4. | 13-14 mEq/kg. |
| 145. | The common cause of subarachnoid hemorrhage is: |
| 41 | |
| (| |
| 1 | Arterio-venous malformation. |
| 2.3. | Cavernous Angioma. Aneurysm. |
| 4. | Hypertension. |
| 146. | Brain abscess in cyanotic heart disease is commonly located in : |

1. Glioma.

| 2. | Thalamus. |
|------|---|
| 3. | Temporal lobe. |
| 4. | Parietal lobe. |
| 147. | Afferent component of corneal reflex is mediated by: |
| 1. | Vagus nerve. |
| 2. | Facial nerve. |
| 3. | Trigeminal nerve. |
| 4. | Glossopharyngeal nerve. |
| 148. | In adults, the spinal cord normally ends at: Lower border of L1. |
| 2. | Lower border of L3. |
| 3. | Lower border of S1. |
| 4. | Lower border of L5. |
| 149. | Middle meningeal artery is direct branch of : |

1. Cerebellar hemisphere

| 2. | Internal maxillary artery. |
|----------------|--|
| 3. | Superficial temporal artery. |
| 4. | Middle cerebral artery. |
| 150. | Which of the following is not a common feature of Anorexia Nervosa? |
| 1. | Binge eating. |
| 2. | Amennorhea. |
| 3. | Self perception of being †fat'. |
| 4. | Under weight. |
| 151. follow | An affected male infant born to normal parents could be an example of all of the ring, except: |
| 1 | An Autosomal dominant disorder. |
| 2. | An Autosomal recessive disorder. |
| 3. | A polygenic disorder. |
| 4. | A vertically transmitted disorder. |
| 152. – gl | The following methods can be used to detect the point mutation in the beta $(i \Box \phi)$ obin gene that causes sickle cell anemia, except: |

1. External carotid artery.

| 1. | Polymerase chain reaction with allele-specific oligonucleotide hybridization. |
|---------------|---|
| 2. | Southern blot analysis. |
| 3. | DNA sequencing. |
| 4. | Northern blot analysis. |
| 153. growt | A child with a small head, minor anomalies of the face including a thin upper lip, th delay, and developmental disability can have all of the following, except: |
| 1. | A chromosomal syndrome. |
| 2. | A teratogenic syndrome. |
| | |
| 3. | A Mendelian syndrome. |
| 4. | A polygenic syndrome. |
| - A | In a family, the father has widely spaced eyes, increased facial hair and deafness. of the three children has deafness with similar facial features. The mother is normal. h one of the following is most likely pattern of inheritance in this case? |
| Št. | Autosomal dominant. |
| 2. | Autosomal recessive. |
| 3. | X-linked dominant. |
| 4. | X-linked recessive. |

| 155. | Mitochondrial DNA is: |
|----------------|---|
| 1. | Closed circular. |
| 2. | Nicked circular. |
| 3. | Linear. |
| 4. | Open circular. |
| 156. | Polar bodies are formed during : |
| 1. | Spermatogenesis. |
| 2. | Organogenesis. |
| 3. | Oogenesis. |
| 4. | Morphogenesis. |
| | |
| 157. follow | Prenatal diagnosis at 16 weeks of pregnancy can be performed using all of the ving, except: |
| 1 | v) { |
| 1 | Amniotic fluid. |
| 2. | Maternal blood. |
| 3. | Chorionic villi. |
| 4. | Fetal blood. |

| 1. | p and q arms. |
|------|--|
| 2. | m and q arms. |
| 3. | q and p arms. |
| 4. | l and s arms. |
| 159. | Euchromatin is the region of DNA that is relatively: |
| 1. | Uncondensed. |
| 2. | Condensed. |
| 3. | Overcondensed. |
| 4. | Partially condensed. |
| 160. | Microsatellite sequence is: |
| | |
| 19 | Small satellite. |
| 2. | Extra chromosomal DNA. |
| 3. | Short sequence (2-5) repeat DNA. |
| 4. | Looped-DNA. |

158. The long and short arms of chromosomes are designated respectively as:

| 161. length | All of the following cell types contain the enzyme telomerase which protects the of telomeres at the end of chromosomes, except : |
|----------------|---|
| | 1.1 |
| 1. | Germinal |
| 2. | Somatic. |
| 3. | Haemopoetic. |
| 4. | Tumour. |
| 162. | All of the following are the components of the white pulp of spleen, except : |
| 1. | Periarteriolar lymphoid sheath. |
| 2. | B cells. |
| 3. | Antigen presenting cells. |
| 4. | Vascular sinus. |
| 6_1 | |
| | All of the following development events are dependent on the production of nal or fetal glucocorticoid, except |
| 3, | |
| 1 | Induction of thymic involution |
| 2. | Production of surfactant by type II alveolar cells |
| 3. | Functional thyroid |

Functional hypothalamopituitary axis

| 164. of rigl | Referred pain from all of the following conditions may be felt along the inner side ht thigh, except: |
|-----------------|--|
| | - 24 |
| 1. | Inflamed pelvic appendix |
| 2. | Inflamed ovaries |
| | -14 90 |
| 3. | Stone n pelvic Ureter |
| 4. | Pelvic abscess |
| | |
| 165. | A 43 year old woman came with a large abscess in the middle of the right |
| | rior triangle of the neck. The physician incised and drained the abscess. Five days |
| | he patient noticed that she could not extend her right hand above her head to brush iir. Which of the following are the signs and symptoms of additional harm? |
| nei na | in. Which of the following are the signs and symptoms of additional name: |
| | |
| | -4 |
| | 4.6 |
| 1. | Damage to scalenus medius |
| 2. | Injury to suprascapular nerve |
| | injury to supruse paral fier to |
| 3. | Cut to spinal part of accessory nerve |
| 4. | Spread of infection to shoulder joint |
| 10 | |
| 20 | |
| 166. | Which of the following inhalational agents is the induction agent of choice in |
| childr | |
| - 10 | |
| | |
| 1. | Methyoxyflurae |

2. Sevoflurane

| 3. | Desflurane |
|----------------|---|
| 4. | Isoflurane |
| 167. hyper | Which of the following anesthetic agents doesn't trigger malignant thermia? |
| 1. | Halothane |
| 2. | Isoflurane |
| 3. | Suxamethonium |
| 4. | Thiopentone |
| 168. | Which of the following is not an indication for endotracheal intubation? |
| 1. | Maintenance of a patent airway |
| 2. | To provide positive pressure ventilation |
| 3. | Pulmonary toilet |
| 4. | Pneumothorax |
| 169. surger | Which of the following agents is not used to provide induced hypotension during cy? |
| | |

1. Sodium nitroprusside

| 2. | Hydralazine |
|------|--|
| 3. | Mephenteramine |
| 4. | Esmolol |
| 170. | Which of the following agents is used for the treatment of postoperative shivering? |
| 1. | Thiopentone |
| 2. | Suxamethonium |
| 3. | Atropine |
| 4. | Pethidine |
| 171. | Which of the following is not a sign of stellate ganglion block? |
| 1. | Meiosis |
| 2. | exopthalmus |
| 3. | Nasal congestion |
| 4. | Conjuctival redness |
| | Which of the following intravenous induction agents is the most suitable for day urgery? |

1. Morphine

| 2. | Ketamine |
|----------------|--|
| 3. | Propofol |
| 4. | Diazepam |
| 173. | Blalock and Taussig shunt is done between: |
| 1. | Aorta to Pulmonary artery |
| 2. | Aorta to Pulmonary vein |
| 3. | Subclavian artery to Pulmonary vein |
| 4. | Subclavian vein to artery |
| 174. operat | A two month old infant has undergone a major surgical procedure. Regarding post ive pain relief which one of the following is recommended: |
| (| No medication is needed as infant does not feel pain after surgery due to turity of nervous system |
| 2. 3. | Only paracetamol suppository is adequate Spinal narcotics via intrathecal route |
| 4. | Intravenous narcotic infusion in lower dosage |

| 1. | Surgery should be cancelled. |
|---------------------|---|
| 2. | Can proceed for surgery if chest is clear and there is no history of asthma |
| 3. | Should get x-ray chest before proceeding for surgery |
| 4. | Cancel surgery for 3 week and patient to be on antibiotic |
| 176. | A common feature of all serine proteases is: |
| 1. | Autocatalytic activation of zymogen precursor |
| 2. | Tight binding of pancreatic trypsin inhibitor |
| 3. | Cleavage of protein on the carboxyl site of serine residues |
| 4. | Presence of Ser-His-Asp catalytic triad at the active site |
| 177. Okaza 1. | During replication of DNA, which one of the following enzymes polymerizes the ki fragments? DNA Polymerase I |
| 2. | DNA Polymerase II |
| 3. | DNA Polymerase III |
| 4. | RNA Polymerase I |
| | |

| 178. During phagocytosis, the metabolic process called respiratory burst involves the activation of: | |
|--|---|
| 1. | Oxidase |
| 2. | Hydrolase |
| 3. | Peroxidase |
| 4. | Dehydrogenase |
| | |
| 179. 3' | Which one of the following is the complementary sequence of 5' TTAAGCTAC |
| 1. | 5' GTACGCTTAA 3' |
| 2. | 5' AATTCGCATG 3' |
| 3. | 5' CATGCGAATT 3' |
| 4. | 5' TTAAGCGTAC 3' |
| E_/ | 4.4 |
| 180. | Base substitution mutatins can have be following molecular consequences except: |
| 1 | |
| 1 | Changes one codon for an amino acid into another codon for that same amino acid |
| 2. | Codon for one amino acid is changed into a codon of another amino acid |
| 3. | Reading frame changes downstream to the mutant site |

4. Codon for one amino acid is changed into a translation termination codon

| 1. | Isocitrate dehydrogenase |
|------|---|
| 2. | Homocysteine methyl transferase |
| 3. | Glycogen synthase |
| 4. | G-6-P dehydrogenase |
| 182. | The normal cellular counterparts of oncogenes are important for the following ons except: |
| 1. | Promotion of cell cycle progression |
| 2. | Inhibition of apoptosis |
| 3. | Promotion of DNA repair |
| 4. | Promotion of nuclear transcription |
| 41 | |
| 183. | The ligand-receptor complex dissociates in the endosome because: |
| 3 | |
| 1 | Of its large size |
| 2. | The vesicle looses its clathrin coat |
| 3. | Of the acidic pH of the vesicle |
| 4. | Of the basic pH of the vesicle |

181. Vitamin B12 acts as coenzyme to which one of the following enzymes?

| 184. is: | The amino acid which serves as a carrier of ammonia from skeletal muscle to liver |
|---------------|--|
| | -34 |
| 1. | Alanine |
| 2. | Methionine |
| 3. | Arginine |
| 4. | Glutamine |
| 185. | All of the following amino acids are converted to succinyl – CoA, except: |
| | 44 /1715 |
| 1. | Methionine |
| 2. | Isoleucine |
| 3. | Valine |
| 4. | Histidine |
| 91 | |
| 186. produ | The specialized mammalian tissue/organ in which fuel oxidation serves not to ce ATP but to generate heat is: |
| 1 | |
| - I | Adrenal gland |
| 2. | Skeletal muscle |
| | |
| 3. | Brown adipose tissue |

4. Heart www.examrace.com

| 187. | The human plasma lipoprotein containing the highest percentage of triacylglycerol |
|-------|---|
| by we | ight is: |
| | |
| | 11-11. |
| 1. | VLDL |

| 188. | All of the following enzymes are regulated by calcium or calmodulin, except: |
| 100. | The or the reme wing the printer and regulation of the remaining enterption |
| | |
| 1. | Adenylate cyclase |
| 2 | 4.6 |
| 2. | Glycogen synthase |
| 3. | Guanylyl cyclase |
| 4 | Handbirth |
| 4. | Hexokinase |
| | 11 |
| / | |
| 189. | The sigma (ï□³) subunit of prokaryotic RNA Polymerase: |
| - | |
| - / | '/ |
| -15 | Binds the antibiotic Rifampicin |
| 2. | Is inhibited by i'□ _i -amanitin |
| ۷. | |
| 3 | Specifically recognizes the promoter site |

| 4. | Is part of the core enzyme |
|------|---|
| 190. | Which type of RNA has the highest percentage of modified base: |
| 1. | mRNA |
| 2. | tRNA |
| 3. | rRNA |
| 4. | snRNA |
| | There are more than 300 variants of human hemoglobin gene. Among these only a re fatal. Hence, the most important factor to be conserved in a protein for its on is the: |
| 1. | Amino acid sequence |
| 2. | Ligand binding residues |
| 3. | Structure |
| 4. | Environment |
| | Proteins are linear polymers of amino acids. They fold into compact structures. times, these folded structures associate to form homo – or hetero-dimers. Which the following refers to this associated form? |

Denatured state

Molecular aggregation

| 3. | Precipitation |
|----------------|---|
| 4. | Quaternary structure |
| 193. protei | Which one of the following can be a homologous substitution for isoleucine in a n sequence? |
| 1. | Methionine |
| 2. | Aspartic acid |
| 3. | Valine |
| 4. | Arginine |
| 194. | The comparison of the amino acid sequence of Cytochrome C from different |
| species 1. | s shows many variations. Most of these variations are found: Randomly |
| 2. | Only in helical regions |
| 3. | Only in strand regions |
| 4. | Mainly in loop regions |
| 195. forma | The structural proteins are involved in maintaining the shape of a cell or in the tion of matrices in the body. The shape of these proteins is: |
| | |

Stretch of beads 4. Planar The major purpose of randomization in a clinical trails is to: 196. Facilitate double blinding Help ensure the study subjects are representative of general population 2. Ensure the groups are comparable on base line characteristics Reduce selection bias in allocation to treatment The purpose of double blinding in clinical trials is to: 197. Achieve comparability between study and control groups Avoid observer bias Avoid subject bias Avoid observer and subject bias 198. When a drug is evaluated for its usefulness in controlled conditions, it is termed as a trial signifying:

1

2.

Globular

Fibrous

| 1. | Efficacy |

| 2. | Effectiveness |
| 3. | Efficiency |
| 4. | Effect modification |
| 199. | Which of the following is most strongly associated with coronary heart disease? |
| 1. | Apolipoproteins |
| 2. | VLDL |
| 3. | HDL |
| 4. | Total liproproteins |
| 200. | The extra energy allowances needed per day during pregnancy is: |
| 200. | The extra energy allowances needed per day during pregnancy is: 150 KCals |
| 2. | 200 KCals |
| 3. | 300 KCals |
| 4. | 550 KCals |
| 9 | |
| | |

201. In a village having population of 1000, we found patients with certain disease and the results of a new diagnostic test on that disease are given below.

Disease

Test result Present Absent

Which of the following is the positive predictive value of diagnostic test in that population

- 1. 45
- 2. 31
- 3. 95
- 4. 50

202. Physical quality of life index is measured by all except:

- 1. Infant mortality
- 2. Life expectancy at age one
- 3. Literacy
- 4. Per capita income
- 203. All the statements are true about standardization except:

- 1. Standardization allows comparison to be made between two different populations
- 2. The national population is always taken as the standard population
- 3. For Direct Standardization, age specific rates of the study population are applied to that of the standard population
- 4. For Indirect Standardization, age specific rates of the standard population are applied to that of the study population
- 204. All the following are true in a randomized control trial (RCT) except:
 - 1. Baseline characteristics of intervention and control groups should be similar
 - 2. Investigator's bias is minimized by double blinding
 - 3. The sample size required depends on the hypothesis
 - 4. The drop-outs from the trial should be excluded from he analysis.
- 205. Study the following table carefully and answer the following question:

Disease

Test result Present Absent

+ 40 225

ï€ 10 225

What is the sensitivity of diagnostic test?

- 1. 45
- 2. 20 www.examrace.com

| 2. | 6.5 |
| 3. | 7.8 |

4. 10.5

| | A 6-month-old infant had itchy erythematous papules and exudative lesions on the face, groins and axillae for one month. She also had vesicular lesions on the . The most likely diagnosis is: |
|-------|---|
| 1. | Congenital syphilis |
| 2. | Seborrhoeic dermatitis |
| 3. | Scabies |
| 4. | Psoriasis |
| 212. | Pterygium of nail is characteristically seen in: |
| 1. | Lichen planus |
| 2. | Psoriasis |
| 3. | Tinea unguium |
| 4. | Alopecia areata |
| small | A patient had seven irregular hyperpigmented macules on the trunk and multiple hyperpigmented macules in the axillae and groins since early childhood. There no other skin lesions. Which is the most likely investigation to support the osis? |
| | |
| 1. | Slit lamp examination of eye |

Measurement of intraocular tension

| 3. Examination of fundus |
|--|
| 4. Retinal artery angiography |
| 214. A 24-year-old unmarried woman has multiple nodular, cystic, pustular and comadonic lesions on face, upper back and shoulders for 2 years. The drug of choice for her treatment would be: |
| 1. Acitretin |
| 2. Isotretinoin |
| 3. Doxycycline |
| 4. Azithromycin |
| 215. A 45-year-old farmer has itchy erythematous papular lesions on face, neck, â€~V' area of chest, dorsum of hands and forearms for 3 years. The lesions are more severe in summers and improve by 75% in winters. The most appropriate test to diagnose the condition would be: |
| 1. Skin biopsy |
| 2. Estimation of IgE levels in blood |
| 3. Patch test |
| 4. Intradermal prick test |

216. Finger Print Bureau was first established in:

| 1. | England |
|-------------|--|
| 2. | China |
| 3. | India |
| 4. | Singapore |
| 217. | Spalding's sign occurs after: |
| 1. | Birth of live foetus |
| 2. | Death of foetus in uterus |
| 3. | Rigor mortis of infant |
| 4. | Cadaveric spasm |
| | -14 |
| 218. MCI | Medical qualifications awarded by institutions out side India and recognized by are registered in: |

| 1. | First schedule of Indian Medical Council Act 1956 |
| 2. | Second schedule of Indian Medical Council Act 1956 |
| 3. | Part I of third schedule of Indian Medical Council Act 1956 |
| 4. | Part II of third schedule of Indian Medical Council Act 1956 |
| | |

219. Scab or Crut of abrasion appears brown:

| 1. | Between 12-24 hours |
|---------------------------------|---|
| 2. | Between 2-3 days |
| 3. | Between 4-5 days |
| 4. | Between 5-7 days |
| 220. | Which of following tests is used to detect semen? |
| 1. | Phenolphthalein test |
| 2. | Reine's test |
| 3.4. | Barberio's test Paraffin test |
| 221. one o 1. 2. 3. 4. | The presence of anti-Saccharomyces cerevisae antibody is a surrogate marker of fthe following Coeliac disease Crohn's disease Ulcerative colitis Tropical sprue |

222. The most common cause of gastric outlet obstruction in India is:

| 4. | Peptic ulcer disease | C. LE |
|----------------|--|--------------|
| 223. | Which of the following parasitic infestation can led to malabsorpti | on syndrome? |
| 1. | Amoebiasis | |
| 2. | Adcariasis | |
| 3. | Hookworm infestation | |
| 4. | Giardiasis | |
| 1. 2. 3. | Which of the following is not a feature of hypercalcemia: Diarrhoea Polyuria Depression Vomiting | |
| 225. | Joint erosions are not a feature of: | www.exam |

Tuberculosis

2.

Cancer of stomach

Duodenal lymphoma

| 1. | Rheumatoid arthritis |
|--|---|
| 2. | Psoriasis |
| 3. | Multicentric reticulohistiocytosis |
| 4. | Systemic lpus erythematosus |
| 226. | Nevirapine is a: |
| 1. | Protease inhibitor |
| 2. | Nucleoside reverse transcriptase inhibitor |
| 3. | Non-nucleoside reverse transcriptase inhibitor |
| 4. | Fusion inhibitor |
| 227. 1. 2. 3. 4. | Anticentromere antibodies are most commonly associated with: Diffuse cutaneous systemic sclerosis Mixed connective tissue disease CREST syndrome Polymyositis |
| | |

228. A 58 years old woman, who had backache and recurrent chest infections for 6 months, develops sudden weakness of the legs and urinary retention. Her investigation among the companion of the legs and urinary retention.

show a hemoglobin of 7.3gm/dl, serum calcium 12.6mg/dl, phosphate-2.5mg/dl, alkaline phosphatase-100u/l, serum albumin-3 gm/dl, globulin-7.1gm/dl and urea-178 mg/d. What is the most likely diagnosis?

| 1. | Lung cancer |
|---------------|---|
| 2. | Disseminated tuberculosis |
| 3. | Multiple myeloma |
| 4. | Osteoporosis |
| 229. | All of the following drugs are protease inhibitors except: |
| 1. | Nelfinavir |
| 2. | Saquinavir |
| 3. | Abacavir |
| 4. | Ritonavir |
| 8_/ | |
| 230. polym | Which one of the following clinical findings excludes the diagnosis of yositis? |
| 3 | |
| 1 | |
| 1 | Neck muscle involvement |
| 2. | Extraocular muscle involvement |
| 3. | Dysphagia |

4. Abdominal muscle involvement

| 231. | All of the following are the known causes of osteroporosis except: |
|------|--|
| | -25 |
| 1. | Flurosis |
| 2. | Hypogonadism |
| 3. | Hyperthyroidism |
| 4. | Hyperparathyroidism |
| | |
| | A 28 years old woman having limited cutaneous scleroderma for the last 10 years lains of shortness of breath for last one month. Her pulmonary function tests (PFT) follows: |
| | |
| PF | Γ Observed Predicted |
| FV | C 2.63 2.82 |
| FE | V1 88% 80% |
| DL | CO 5.26 16.3 |
| Wł | nat is the most likely diagnosis in this case? |
| 1 | Interstitial lung disease |
| 2. | Pulmonary artery hypertension |

3. Congestive heart failure

4. Bronchiectasis

| 1. | Staphylococcus albust |
|------|--|
| 2. | Streptococcus faecalis |
| 3. | Salmonella typhi |
| 4. | Pseudomonas aeruginosa |
| 234. | All of the following may occur due to hyperkalemia, except: |
| 1. | Prolonged PR interval |
| 2. | Prolonged QRS interval |
| 3. | Prolonged QT interval |
| 4. | Ventricular asystole |
| 235. | Renal artery stenosis may occur in all of the following, except: |
| 3, | |
| 1 | Atherosclerosis |
| 2. | Fibromuscular dysplasia |
| 3. | Takayasu's arteritis |
| 4. | Polyarteritis nodosa |

233. Which of the following is least likely to cause infective endocarditis:

| 1. | Dilated cardiomyopathy |
|------|---|
| 2. | Hypertrophic cardiomyopathy |
| 3. | Eisenmenger's syndrome |
| 4. | Ventricular septal defect |
| 237. | All of the following are risk factors for atherosclerosis except: |
| 1. | Increased waist-hip ratio |
| 2. | Hyperhomocysteinemia |
| 3. | Decreased fibrinogen levels |
| 4. | Decreased HDL levels |
| 6 1 | |
| - | |
| 238. | All of the following may occur in Down's syndrome except: |
| 3 | |
| 1 | Hypothyroidism |
| 2. | Undescended testis |
| 3. | Ventricular septal defect |
| 4. | Brushfield's spots |

236. Sudden cardiac death may occur in all of the following, except:

| 239. | All of the following may be seen in patients of cardiac tamponade except: |
|----------------|--|
| 1. | Kussmaul's sign |
| 2. | Pulsus paradoxus |
| 3. | Electrical alternans |
| 4. | Right ventricular diastolic collapse on echocardiogram |
| 240. but sh | A 15 year old female presents with primary amenorrhoea. Her breasts are Tanner 4 he has no axillary or pubic hair. The most likely diagnosis is: |
| 1. 2. | Turner's syndrome Mullerian agenesis |
| 3. | Testicular feminization syndrome |
| 4. | Premature ovarian failure |
| 241 | The common side effect with Fluoxetine therapy is: |
| h, | Seizure |
| 2. | Anxiety |
| 3. | Hypotension |
| 4 | Loose stools |

| 242 of ge | A young girl has consumed barium carbonate with suicidal intent. She complains neralized muscle weakness. The most likely electrolyte is: |
|--------------|---|
| | 4.0 |
| 1. | Hyponatremia |
| 2. | Hypocalcemia |
| 3. | Hypokalemia |
| 4. | Hypomagnesemia |
| 243 excep | All of the following antibacterial agents acts by inhibting cell wall synthesis, ot: |
| 1. | Carbapenems. |
| 2. | Monobactams |
| 3. | Cephamycins |
| 4. | Nitrofurantoin |
| 45 1 | |
| 1 | |
| 244 | A veterinary doctor had pyrexia of unknown origin. his blood culture in special |
| | atory media was positive for gram negative short bacilli which was oxidase positive. It one of the following is the likely organism grown in culture? |
| | |
| 1. | Pasturella spp. |
| 2. | Francisella spp. |

3. Bartonella spp.

- 4. Brucella spp.
 245 Which one of the following statement is true regarding pathogenicity of Mycobacteria species?
 1. M.tuberculosis is more pathogenic than M.bovis to the humans.
 - 2. M. Kansasii can cause a disease indistinguishable from tuberculosis.
 - 3. M.africanum infection is acquired from the environmental source.
 - 4. M.marinum is responsible for tubercular lymphadenopathy.
- A young boy had a flea bite while working in a wheat grain godown. After 5 days he developed fever and had axillary lymphadenopathy. A smear was sent to the laboratory to perform a specific staining. Which one of the following staining method would help in the identification of the suspected pathogen:
 - 1. Albert staining.
 - 2. Zeihl â€" Neelson staining
 - 3. Mc Fadyean's staining
 - 4. Wayson staining
- 247 A 40 years old women presented to the gynecologist with complaints of profuse vaginal discharge. There was no discharge from the cervical os on the speculum examination. The diagnosis of bacterial vaginosis was made based upon all of the following findings on microscopy except:

| 1. | Abundance of gram variable coccobacilli. |
|-------|--|
| 2. | Absence of Lactobacilli. |
| 3. | Abundance of polymorphs. |
| 4. | Presence of clue cells. |
| and s | A patient complained of chills and fever following a louse bite 2 weeks before. He rashes all over the body and was delirious at the time of presentation to the hospital subsequently went into coma. A provisional diagnosis of vasculitis due to Rickettsial ction was made. Which one of the following can be cansative agent: |
| 1. | Rickettsia typhi. |
| 2. | Rickettsia rickettsiae |
| 3. | Rickettsia prowazekii. |
| 4. | Rickettsia akarai. |
| | A diabetic patient developed cellutitis due to Staphylococcus aureus, which was d to be Methicillin resistant on the antibiotic sensitivity testing. All the following poditics will be appropriate except. |
| - | |
| 1/ | Vancomycin |
| 1 | |
| 2. | Imipenem |
| 3. | Teichoplanin |
| 4. | Linezoiid |

| 250 in det | A VDRL reactive mother gave birth to an infant. All of the following would help termining the risk of transmission to the infant except: |
|---------------------------------|--|
| 1. 2. | TPHA test on the serum sample of the mother. TPHA test on the serum sample of the infant |
| 3. | VDRL on the paired serum sample of the infant and mother. |
| 4. | Time interval between the treatment of the mother and her delivery. |
| 251 | At what period does tuberculosis flare up most commonly in a pregnant patient? First trimester |
| 2. | Second trimester |
| 3.4. | Third trimester Puerperium. |
| 252 | which surgical procedure has the highest incidence of ureteric injury? |
| I. | Vaginal hysterectomy |
| 2 | Abdomainal hysterectomy |

Wertheim's hysterectomy

4. Anterior colporraphy.

3.

| 253 | The following hormone is raised in polycystic ovarian syndrome: |
|-----------|---|
| 1. | 17-OH Progesterone |
| 2. | Follicular stimulating hormone |
| 3. | Lutenising hormone |
| 4. | Thyroid stimulating hormone |
| 254 pheny | which vitamin deficient is most commonly seen in a pregnant mother who is on ytion therepy for Epilesy? Vitamin B6 |
| 2. | Vitamin B12 |
| 3. | Vitamin A. Folic Acid |
| | Which of the following ovarian tumour is most prone to undergo torsion during nancy? Serous Cystadenoma |
| 2. | Mucenous Cystadenoma |

3. Dermois cyst www.examrace.com

| 4. Theca Lutein Cyst |
|--|
| 256 Which one of the following congenital malformation of the fetus can be diagnosed in first trimester by ultrasound? |
| 1. Anencephaly |
| 2. Inencephaly |
| 3. Microcephaly |
| 4. Holoprosencephaly. |
| The most common cause of tubal block in India is: |
| 1. Gonorrhoea infection |
| 2. Chlamydia infection |
| 3. Tuberculosis |
| 4. Bacterial Vaginosis |
| |
| 258 The following complications dueing pregnancy increase the risk of Post Partum Haemorrhage (PPH) except: |

1. Hypertension

Macrosomia

| 3. | Twin pregnancy |
|--------------|---|
| 4. | Hydramnios. |
| 259 excep | Indicators of impending uterine rupture during labour include all of the following ot: |
| 1. | Fetal distress. |
| 2. | Hematuria |
| 3. | Fresh bleeding per vaginum |
| 4. | Passage of meconium |
| 3. | which of the following statements is incorrect regarding polycystic ovarian se? Elevated LH hormone Can cause infertility May be associated with abnormal glucose tolerance test. Results in postdated pregnancy. |
| | Which of the following statements is incorrect regarding levonorgestral releasing uterine system? |
| 1. | There is increased incidence of menorrhagia. |

| 2. This system can be used as hormone replacement therapy. |
|---|
| 3. this method is useful for the treatment of Endometerial hyperplasia |
| 4. Irregular uterine bleeding can be problem initially. |
| 262 All of the following mechanisms might account for a reduced risk of upper genital tract infection in users of progestin – releasing IUDs, except: |
| Reduced retrograde menstruation |
| 2. Decreased ovulation |
| 3. Thickened cervical mucus |
| 4. Decidual changes in the endometrium. |
| 263 Emergency contraception prevents pregnancy by all of the following mechanisms, except. |
| 1. Delaying / inhibiting ovulation |
| 2. Inhibiting fertilization |
| 3. Preventing implantation of the fertilized egg. |
| 4. Interrupting an early pregnancy. |
| |
| 264 Misoprostol is a: |

| 2. | Prostaglandin E2 analogue |
|---------------------------------|--|
| 3. | Prostaglandin antagonist |
| 4. | Antiprogestin. |
| 265 excep | Lymphatic drainage of the cervix occurs by all of the following lymph nodes, ot: |
| 1. | Parameterial lymph nodes. |
| 2. | Deep inguinal lymph nodes. |
| 3. 4. | Obtruator lymph nodes Ext. iliac lymph nodes. |
| 266. | The treatment for a case of virilising adrenal hyperplasia is: |
| The state of | Estrogens |
| 2. | Antiandrogens |
| 3.4. | ACTH. Cortisone. |
| 9 | |
| 267 | A primigravida presents to casually at 32wks. |

1. Prostaglandin E1 analogue

gestation with acute pain abdomen for 2hours, vaginal bleeding and decreased fetal movements, She should be managed by: Immediate caesarean section Immediate induction of labour Tocolytic therapy 3. Magnesium sulphate therapy The investigation of choice in a 55 year old postmenopausal woman who has 268 presented with postmenopausal bleeding is: Pap smear Fractional curettage Transvaginal ultrasound CA-125 estimation 269 In which of the following genital tract malignancy, the risk of metastasis to ovary is the least? Carcinoma cervix 2. Carcinoma endometrium

Carcinoma fallopian tube

Uterine sarcoma

| 270 | The best way of diagnosing Trisomy-21 during second trimester of pregnancy is: |
|-----|--|
| 1. | Triple marker estimation |
| 2. | Nuchal skin fold thickness measurement |
| 3. | Chorionic villus sampling |
| 4. | Amniocentesis |
| 271 | Calcitonin is secreted by: |
| 1. | Thyroid gland |
| 2. | Parathyroid gland |
| 3. | Adrenal glands |
| 4. | Ovaries |
| 272 | Which of the following is an intraarticular tendon? |
| (| 1 |
| h, | Sartorius |
| 2. | Semitendinosus |
| 3. | Anconeus |
| 4. | Popliteus |

| 2. | Giant cell tumor |
|-----|--|
| 3. | Fibrous cortical defect |
| 4. | Simple bone cyst |
| 274 | Bisphosphonates act by: |
| 1. | Increasing the osteoid formation. |
| 2. | Increasing the mineralisation of osteoid. |
| 3. | Decreasing the osteoclast mediated resorption of bone. |
| 4. | Decreasing the parathyroid hormone secretion. |
| | |
| 275 | All the statements are true about exotosis, except: |
| 3 | It occurs at the growing end of bone. |
| 2. | Growth continues after skeletal maturity. |
| 3. | It is covered by cartilaginous cap. |
| 4. | Maligant transformation may occur. |

273 which of the following conditions is least likely to present as an eccentric osteolytic lesion:

1. Aneurysmal bone cyst.

| 276 | "Rugger Jersey Spineâ€□ is seen in: |
|---------------|---|
| | |
| 1. | Fluorosis |
| 2. | Achondroplasia |
| 3. | Renal Osteodystrophy. |
| 4. | Marfan's Syndrome. |
| 277 | Brown tumours are seen in: |
| 1. | Hyperparathyroidism. |
| 2. | Pigmented villonodular synovitis |
| 3. | Osteomalacia |
| 4. | Neurofibromatosis |
| 278 hip, e | All of the following statements are true about development dysplasia (DDH) of the except: |
| 3 | 2 { |
| 1 | It is more common in females. |
| 2. | Oligohydramnios is associated with a higher risk of DDH. |
| 3. reduc | The hourglass appearance of the capsule may prevent a successful closed tion. |

4. Twin pregnancy is a known risk factor.

| 1. | Preganglinoic lesions have a better prognosis than postganglionic lesions. |
|----------|---|
| 2. | Erb's palsy causes paralysis of the abductors and external rotators of the |
| should | der. |
| 2 | L IZI I SOTM I II SOTM I I II SOTM |
| 3. side. | In Klumpke's palsy, Horner's syndrome may be present on the ipsilateal |
| 4. | Histamine test is useful to differentiate between the preganglinoic and |
| | anglinoic lesions. |
| | |
| 280 | The ideal treatment of bilateral idiopathic clubfoot in a newborn is: |
| | |
| 1 | |
| 1. | Manipulation by mother. |
| 2 | |
| 2. | Manipulation and Dennis Brown splint. |
| 3. | Manipulation and Casts. |
| 4. | Surgical release. |
| (| |
| 1 | |
| 281 | The postero superior retraction pocket, if allowed to progress, will lead to: |
| - 1 | .) |
| - 7 | 18/ |
| 1. | Sensori-neural hearing loss. |
| 2. | Secondary Cholesteatoma. |

279 All are true regarding brachial plexus injury, except:

3. Tympanoscelerosis.

| 4. | Tertiary cholesteatoma. |
|--------------|--|
| 282 throm | A 30 year old male is having Attic cholesteatoma of left ear with lateral sinus abophelebitis. Which of the following will be the operation of choice? |
| 1. | Intact canal wall mastiodectomy. |
| 2. | Simple mastoidectomy with Tympanoplasty. |
| 3. | Canal wall down mastoidectomy. |
| 4. | Mastoidectomy with cavity obliteration. |
| 283 | Which of the following conditions causes the maximum hearing loss? |
| 1. | Ossicular disruption with intact tympanic membrane |
| 2. | Disruption of malleus and incus as well tympanic membrane. |
| 3. | Partial fixation of the stapes foorplate. |
| 4. | Ottitis media with effusion. |
| 10 | 2 { |
| 284 | During inspiration the main current of airflow in a normal nasal cavity is through: |
| 1. | Middle part of the cavity in middle meatus in a parabolic curve. |
| 2. | Lower part of the cavity in the inferior meatus in a parabolic curve. |

Superior part of the cavity in the superior meatus.

| 4. | Through olfactory area. |
|-----------|--|
| 285 | Which is the investigation of choice in assessing hearing loss in neonates? |
| | 19 |
| 1. | Impedance audiometry. |
| 2. | Brainstem Evoked Response Audiometry (BERA). |
| 3. | Free field audiometry. |
| 4. | Behavioral audiometry. |
| 286 | The most common etiological agent for acute bronchiolitis in infancy is: |
| 1. | Influenza virus. |
| 2. | Para influenza virus. |
| 3. | Rhinovirus. |
| 81 | |
| 4. | Respiratory syncytial virus. |
| 1 | |
| 287 incub | Which of the following is the principal mode of heat exchange in an infant ator? |
| 9 | 3 |
| 1. | Radiation. |

2. Evaporation.

| 3. | Convection. |
|---------------|--|
| 4. | Conduction. |
| 288 featur | Late onset hemorrhagic disease of newborn is characterized by all of the following res except: |
| 1. | Usually occurs in cow-milk fed babies. |
| 2. | Onset occurs at 4-12wk of age. |
| 3. | Intracranial hemorrhage can occur. |
| 4. | Intramuscular vitamin K prophylaxis at birth has a protective role. |
| 289 deper | Which of the following malformation in a newborn is specific for maternal insulin ident diabetes mellitus? |
| 1. | Transposition of great arteries |
| 2. | Caudal regression |
| 3. | Holoprosencephaly. |
| 290 | Meningmyelocele. the prognosis of rhabdomysarcoma is likely to be poor if the site of the tumour is: |
| 1 | Orbit |

2. Para testicular www.examrace.com

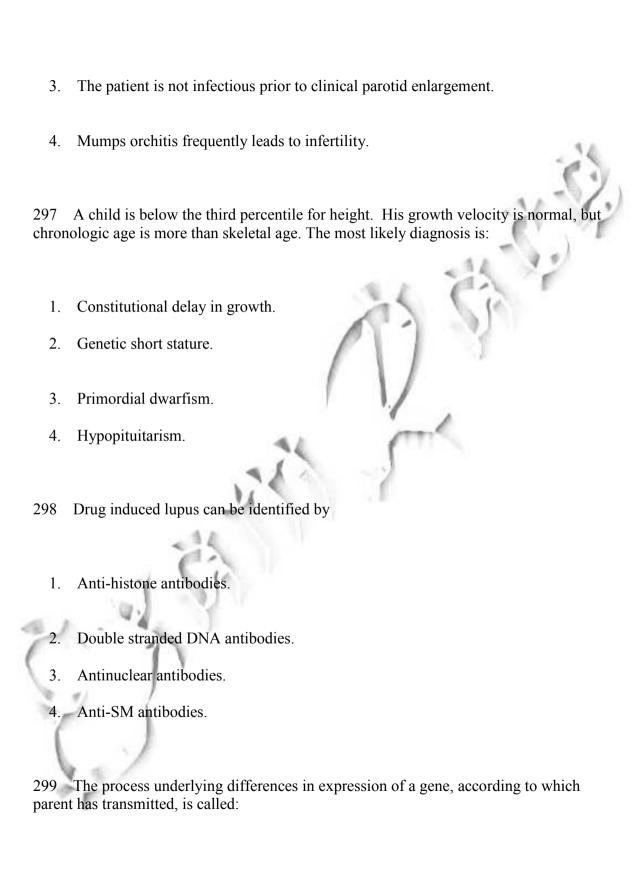

| 3. | Extremity |
|-----|--|
| 4. | Urinary bladder. |
| 291 | Which of the following malignant tumors is radioresistant? |
| 1. | Ewing's sarcoma. |
| 2. | Retinoblastoma. |
| 3. | Osteosarcoma |
| 4. | Neuroblastoma. |
| 292 | The most common second malignancy in survivors of retinoblastoma is: |
| 1. | Thyroid cancer. |
| 2. | Nasopharyngeal carcinoma |
| 3. | Optic glioma. |
| 4. | Osteosarcoma. |
| 293 | The most important determinant of prognosis in Wilms tumor |
| 1. | Stage of disease. |
