<b>UNIT I</b>	<b>DISTRIBUTED DATABASES</b>	<b>5</b>
Distributed Databases Vs Conventional Databases – Architecture – Fragmentation – Query Processing – Transaction Processing – Concurrency Control – Recovery.		
<b>UNIT II</b>	<b>OBJECT ORIENTED DATABASES</b>	<b>10</b>
Introduction to Object Oriented Data Bases - Approaches - Modeling and Design - Persistence – Query Languages - Transaction - Concurrency – Multi Version Locks - Recovery.		
<b>UNIT III</b>	<b>EMERGING SYSTEMS</b>	<b>10</b>
Enhanced Data Models - Client/Server Model - Data Warehousing and Data Mining - Web Databases – Mobile Databases.		
<b>UNIT IV</b>	<b>DATABASE DESIGN ISSUES</b>	<b>10</b>
ER Model - Normalization - Security - Integrity - Consistency - Database Tuning - Optimization and Research Issues – Design of Temporal Databases – Spatial Databases.		
<b>UNIT V</b>	<b>CURRENT ISSUES</b>	<b>10</b>
Rules - Knowledge Bases - Active And Deductive Databases - Parallel Databases – Multimedia Databases – Image Databases – Text Database		

**TOTAL : 45 PERIODS**

- UNIT I INTRODUCTION 9**  
Overview - Functions of an Operating System – Design Approaches – Types of Advanced Operating System - Synchronization Mechanisms – Concept of a Process, Concurrent Processes – The Critical Section Problem, Other Synchronization Problems – Language Mechanisms for Synchronization – Axiomatic Verification of Parallel Programs - Process Deadlocks - Preliminaries – Models of Deadlocks, Resources, System State – Necessary and Sufficient conditions for a Deadlock – Systems with Single-Unit Requests, Consumable Resources, Reusable Resources.
- UNIT II DISTRIBUTED OPERATING SYSTEMS 9**  
Introduction – Issues – Communication Primitives – Inherent Limitations - Lamport’s Logical Clock; Vector Clock; Causal Ordering; Global State; Cuts; Termination Detection. Distributed Mutual Exclusion – Non-Token Based Algorithms – Lamport’s Algorithm - Token-Based Algorithms – Suzuki-Kasami’s Broadcast Algorithm – Distributed Deadlock Detection – Issues – Centralized Deadlock-Detection Algorithms - Distributed Deadlock-Detection Algorithms. Agreement Protocols – Classification - Solutions –Applications.
- UNIT III DISTRIBUTED RESOURCE MANAGEMENT 9**  
Distributed File systems – Architecture – Mechanisms – Design Issues – Distributed Shared Memory – Architecture – Algorithm – Protocols - Design Issues. Distributed Scheduling – Issues – Components – Algorithms.
- UNIT IV FAILURE RECOVERY AND FAULT TOLERANCE 9**  
Basic Concepts-Classification of Failures – Basic Approaches to Recovery; Recovery in Concurrent System; Synchronous and Asynchronous Checkpointing and Recovery; Check pointing in Distributed Database Systems; Fault Tolerance; Issues - Two-phase and Non-blocking Commit Protocols; Voting Protocols; Dynamic Voting Protocols;
- UNIT V MULTIPROCESSOR AND DATABASE OPERATING SYSTEMS 9**  
Structures – Design Issues – Threads – Process Synchronization – Processor Scheduling – Memory Management – Reliability / Fault Tolerance; Database Operating Systems – Introduction – Concurrency Control – Distributed Database Systems – Concurrency Control Algorithms.

**TOTAL : 45 PERIODS**

**TEXT BOOK:**

1. Mukesh Singhal and N. G. Shivaratri, “Advanced Concepts in Operating Systems”, McGraw-Hill, 2000

**REFERENCES: .**

**UNIT I** **9**

Basic Compiler Functions – Grammars – Lexical Analysis – Syntactic Analysis – Code Generation – Heap Management – Parameter Passing Methods – Semantics of Calls and Returns – Implementing Subprograms – Stack Dynamic Local Variables – Dynamic binding of method calls to methods – Overview of Memory Management, Virtual Memory, Process Creation – Overview of I/O Systems, Device Drivers, System Boot

**UNIT II** **10**

Introduction and Overview – Symbol table structure – Local and Global Symbol table management Intermediate representation – Issues – High level, medium level, low level intermediate languages – MIR, HIR, LIR – ICAN for Intermediate code – Optimization – Early optimization – loop optimization

**UNIT III** **9**

Procedure optimization – in-line expansion – leaf routine optimization and shrink wrapping – register allocation and assignment – graph coloring – data flow analysis – constant propagation – alias analysis – register allocation – global references – Optimization for memory hierarchy - Code Scheduling – Instruction scheduling – Speculative scheduling – Software pipelining – trace scheduling – Run-time support – Register usage – local stack frame – run-time stack – Code sharing – position-independent code

**UNIT IV** **9**

Introduction to Virtual Machines (VM) – Pascal P-Code VM – Object-Oriented VMs – Java VM Architecture – Common Language Infrastructure – Dynamic Class Loading – Security – Garbage Collection – Optimization

**UNIT V** **8**

Emulation – Interpretation and Binary Translation – Instruction Set Issues – Process Virtual Machines – Profiling – Migration – Grids – Examples of real world implementations of system software

**TOTAL : 45 PERIODS**

**CS9224**

**INFORMATION SECURITY**

**L T P C**  
**3 0 0 3**

**UNIT I**

**9**

An Overview of Computer Security, Access Control Matrix, Policy-Security policies, Confidentiality policies, Integrity policies and Hybrid policies.

**UNIT II**

**9**

Cryptography- Key management – Session and Interchange keys, Key exchange and generation, Cryptographic Key Infrastructure, Storing and Revoking Keys, Digital Signatures, Cipher Techniques

**UNIT III**

**9**

Systems: Design Principles, Representing Identity, Access Control Mechanisms, Information Flow and Confinement Problem.

**UNIT IV**

**9**

Malicious Logic, Vulnerability Analysis, Auditing and Intrusion Detection

**UNIT V**

**9**

Network Security, System Security, User Security and Program Security

**TOTAL : 45 PERIODS**

**TEXT BOOK:**

**CS9225**

**WEB TECHNOLOGY**

**L T P C**  
**3 0 0 3**

**UNIT I**

**9**

Web essentials – clients – servers - communication – markup languages – XHTML – simple XHTML pages style sheets – CSS

**UNIT II**

**9**

Client side programming – Java script language – java script objects – host objects : Browsers and the DOM

**UNIT III**

**9**

Server side programming – java servlets – basics – simple program – separating programming and presentation – ASP/JSP - JSP basics ASP/JSP objects – simple ASP/JSP pages.

**UNIT IV****9**

Representing Web data – data base connectivity – JDBC – Dynamic Web pages – XML – DTD – XML schema – DOM – SAX – Xquery.

**UNIT V****9**

Building Web applications - cookies – sessions – open source environment – PHP – MYSQL – case studies.

**TOTAL : 45 PERIODS****TEXT BOOKS:**

1. Jeffrey C Jackson, “ Web Technology – A computer Science perspective”, Persoson Education, 2007.
2. Chris Bates, “Web Programming – Building Internet Applications, “Wiley India, 2006.

**CS9227****OPERATING SYSTEM LAB****L T P C  
0 0 3 2****MULTIPROCESSOR OPERATING SYSTEMS****PROGRAM 1 – Semaphores - Multiprocessor operating systems**

Assume there are three processes: Pa, Pb, and Pc. Only Pa can output the letter A, Pb B, and Pc C.

Utilizing only semaphores (and no other variables) the processes are synchronized so that the output satisfies the following conditions:

- a) A B must be output before any C's can be output.
- b) B's and C's must alternate in the output string, that is, after the first B is output, another B cannot be output until a C is output. Similarly, once a C is output, another C cannot be output until a B is output.
- c) The total number of B's and C's which have been output at any given point in the output string cannot exceed the number of A's which have been output up to that point.

**Examples**

AACB	-- invalid, violates a)
ABACAC	-- invalid, violates b)
AABCABC	-- invalid, violates c)
AABCAAABC	-- valid
AAAABCBC	-- valid
AB	-- valid

**TOTAL : 45 PERIODS****PROGRAM 2 – Multithreading - Multiprocessor operating systems**

### **The Cigarette Smokers Problem**

Consider a simulation with three smoker threads and one agent thread. Each smoker continuously makes a cigarette and smokes it. But to make a cigarette, a smoker needs three ingredients: tobacco, paper, and matches. One of the smoker threads has only paper, another has only tobacco, and the third has only matches. The agent thread has an infinite supply of all three materials. The three smoker threads are initially blocked. The agent places two randomly chosen (different) ingredients on the table and unblocks the one smoker who has the remaining ingredient. The agent then blocks. The unblocked smoker removes the two ingredients from the table, makes a cigarette, and smokes it for a random amount of time, unblocking the agent on completion of smoking the cigarette. The agent then puts out another random two of the three ingredients, and the cycle repeats.

Write a multi-class multithreaded Java program that uses a monitor to synchronize the agent thread and the three smoker threads. **Do not mechanically translate semaphore code into monitor code!** The agent thread executes in an agent object created from an agent class. Each smoker thread executes in a smoker object. All smoker objects are created from one smoker class whose constructor is used to specify the ingredient possessed by the smoker object. A driver class with a main method constructs the objects and starts the threads.

Use a single monitor object instantiated from a class Control for synchronization. Each of the four threads invokes a synchronized monitor method for its synchronization. No semaphores are allowed. No synchronized blocks are allowed, only synchronized methods. No busy waiting is allowed. No calls to nap inside a synchronized method are allowed (do not nap while holding the monitor object's lock, that is, while inside a synchronized method or while inside a method called by a synchronized method).

### **PROGRAM 3 – Multiple sleeping barbers - Multiprocessor operating systems**

Write a multi-class multithreaded Java program that simulates multiple sleeping barbers, all in one barbershop that has a finite number of chairs in the waiting room. Each customer is instantiated from a single Customer class, each barber is instantiated from a single Barber class.

### **Network operating systems**

#### **PROGRAM 4 – Network operating systems**

Establish a Lab setup for the following network operating systems based programs based on the skills in networking on your own. E.g. for identifying networking hardware, identifying different kinds of network cabling and network interface cards can be done.

#### **Exercises**

1. Identifying Local Area Network Hardware
2. Exploring Local Area Network Configuration Options
3. Verifying TCP/IP Settings
4. Sharing Resources
5. Testing LAN Connections
- 6.

## Real time operating systems

### PROGRAM 5 – Real time operating systems

A real-time program implementing an alarm clock shall be developed.  
[Alarm clock, using C and Simple\_OS]

The program shall fulfill the following requirements:

Clock with alarm functionality shall be implemented, It shall be possible to set the time, It shall be possible to set the alarm time, the alarm shall be *enabled* when the alarm time is set, the alarm shall be *activated* when the alarm is enabled, and when the current time is equal to the alarm time, an activated alarm must be acknowledged. Acknowledgement of an alarm shall lead to the alarm being *disabled*, the alarm is enabled again when a new alarm time is set, an alarm which is not acknowledged shall be repeated every 10 seconds. The program shall communicate with a graphical user interface, where the current time shall be displayed, and where the alarm time shall be displayed when the alarm is enabled. It shall be possible to terminate the program, using a command which is sent from the graphical user interface.

## Database operating systems

### PROGRAM 6 – Transactions and Concurrency -Database operating systems Exercises

Assume any application(e.g.banking) on your own and do the following exercises.

1. Investigate and implement the ObjectStore's concurrency options.
2. Implement the concurrency conflict that occurs between multiple client applications.
3. Observe and implement the implication of nested transactions.

## Distributed operating systems

### PROGRAM 7 – Distributed operating systems

1. Design a RMI Lottery application. Each time you run the client program -- "**java LotteryClient n**", the server program "**LotteryServer**" will generate **n** set of Lottery numbers. Here **n** is a positive integer, representing the money you will spend on Lottery in sterling pounds. Write this program in a proper engineering manner, i.e. there should be specifications, design (flow chart, FD, or pseudo code), coding, test/debug, and documentation.
2. Consider a distributed system that consists of two processes which communicate with each other. Let  $P$  be a state predicate on the local state of one process and  $Q$  be a state predicate on the local state of the other process. Assume that neither  $P$  nor  $Q$  are stable (i.e. closed).  
Design a superimposed computation which detects that there exists an interleaving of underlying events in this system where at some state  $P \wedge Q$  holds. (A superposed computation is one that does not affect the underlying system; it may "read" but not "write" the state of the underlying system. Events in a superposed computation may occur in at the same instant as the underlying events and/or at different instants.) State any assumptions you make.  
[Hint: Use vector clocks.]

1. Creation of HTML pages with frames, links, tables and other tags
2. Usage of internal and external CSS along with HTML pages
3. Client side Programming
  - i. Java script for displaying date and comparing two dates
  - ii. Form Validation including text field, radio buttons, check boxes, list box and other controls
4. Usage of ASP/JSP objects response, Request, Application, Session, Server, ADO etc
  - i. Writing online applications such as shopping, railway/air/bus ticket reservation system with set of ASP/JSP pages
  - ii. Using sessions and cookies as part of the web application
5. Writing Servlet Program using HTTP Servlet
6. Any online application with database access
7. Creation of XML document for a specific domain
8. Writing DTD or XML schema for the domain specific XML document
9. Parsing an XML document using DOM and SAX Parsers
10. Sample web application development in the open source environment

**TOTAL : 45 PERIODS**

- UNIT I WIRELESS COMMUNICATION FUNDAMENTALS 9**  
Introduction – Wireless transmission – Frequencies for radio transmission – Signals – Antennas – Signal Propagation – Multiplexing – Modulations – Spread spectrum – MAC – SDMA – FDMA – TDMA – CDMA – Cellular Wireless Networks.
- UNIT II TELECOMMUNICATION SYSTEMS 11**  
GSM – System Architecture – Protocols – Connection Establishment – Frequency Allocation – Routing – Handover – Security – GPRS.
- UNIT III WIRELESS NETWORKS 9**  
Wireless LAN – IEEE 802.11 Standards – Architecture – Services – HIPERLAN – Adhoc Network – Blue Tooth.
- UNIT IV NETWORK LAYER 9**  
Mobile IP – Dynamic Host Configuration Protocol – Routing – DSDV – DSR – AODV – ZRP – ODMR.
- UNIT V TRANSPORT AND APPLICATION LAYERS 7**  
TCP over Wireless Networks – Indirect TCP – Snooping TCP – Mobile TCP – Fast Retransmit / Fast Recovery – Transmission/Timeout Freezing – Selective Retransmission – Transaction Oriented TCP – WAP – WAP Architecture – WDP – WTLS – WTP – WSP – WML –WML Script – WAE – WTA.

**TOTAL : 45 PERIODS****TEXT BOOKS:**

**UNIT I          AUTOMATA****9**

Introduction to formal proof – Additional forms of Proof – Inductive Proofs – Finite Automata – Deterministic Finite Automata – No deterministic Finite Automata – Finite Automata with Epsilon Transitions.

**UNIT II          REGULAR EXPRESSIONS AND LANGUAGES****9**

Regular Expression – FA and Regular Expressions – Proving Languages not to be regular – Closure Properties of Regular Languages – Equivalence and Minimization of Automata.

**UNIT III          CONTEXT FREE GRAMMAR AND LANGUAGES****9**

CFG – Parse Trees – Ambiguity in Grammars and Languages – Definition of the Pushdown Automata – Languages of a Pushdown Automata – Equivalence of Pushdown Automata and CFG, Deterministic Pushdown Automata.

**UNIT IV          PROPERTIES OF CONTEXT FREE LANGUAGES****9**

Normal Forms for CFG – Pumping Lemma for CFL – Closure Properties of CFL – Turing Machines – Programming Techniques for TM.

**UNIT V          INDECIDABILITY****9**

A Language That Is Not Recursive Enumerable – An Undecidable Problem that Is RE – Undecidable Problems about TM – Post's Correspondence Problem, The Class P And NP.

**TOTAL : 45 PERIODS****TEXT BOOK:**

1. J.E.Hopcroft, R.Motwani and J.D Ullman, "Introduction to Automata Theory, Languages and Computations", Second Edition, Pearson Education, 2003.

**REFERENCES:**

3. Micheal Sipser, "Introduction of the Theory and Computation", Thomson Brokecole, 1997.

**UNIT I          INTRODUCTION TO SOFT COMPUTING AND NEURAL NETWORKS****9**

Evolution of Computing - Soft Computing Constituents – From Conventional AI to Computational Intelligence - Machine Learning Basics

**UNIT II          GENETIC ALGORITHMS****9**

Introduction to Genetic Algorithms (GA) – Applications of GA in Machine Learning - Machine Learning Approach to Knowledge Acquisition.

**UNIT III NEURAL NETWORKS 9**

Machine Learning Using Neural Network, Adaptive Networks – Feed forward Networks – Supervised Learning Neural Networks – Radial Basis Function Networks - Reinforcement Learning – Unsupervised Learning Neural Networks – Adaptive Resonance architectures – Advances in Neural networks.

**UNIT IV FUZZY LOGIC 9**

Fuzzy Sets – Operations on Fuzzy Sets – Fuzzy Relations – Membership Functions- Fuzzy Rules and Fuzzy Reasoning – Fuzzy Inference Systems – Fuzzy Expert Systems – Fuzzy Decision Making.

**UNIT V NEURO-FUZZY MODELING 9**

Adaptive Neuro-Fuzzy Inference Systems – Coactive Neuro-Fuzzy Modeling – Classification and Regression Trees – Data Clustering Algorithms – Rulebase Structure Identification – Neuro-Fuzzy Control – Case studies.

**TOTAL : 45 PERIODS**

**TEXT BOOKS:**

<b>CS9260</b>	<b>EMBEDDED SYSTEMS</b>	<b>L T P C</b> <b>3 0 0 3</b>
<b>UNIT I</b>	<b>EMBEDDED COMPUTING</b>	<b>9</b>
Challenges of Embedded Systems – Embedded system design process. Embedded processors – ARM processor – Architecture, ARM and Thumb Instruction sets		
<b>UNIT II</b>	<b>EMBEDDED C PROGRAMMING</b>	<b>9</b>
C-looping structures – Register allocation – Function calls – Pointer aliasing – structure arrangement – bit fields – unaligned data and endianness – inline functions and inline assembly – portability issues.		
<b>UNIT III</b>	<b>OPTIMIZING ASSEMBLY CODE</b>	<b>9</b>
Profiling and cycle counting – instruction scheduling – Register allocation – conditional execution – looping constructs – bit manipulation – efficient switches – optimized primitives.		
<b>UNIT IV</b>	<b>PROCESSES AND OPERATING SYSTEMS</b>	<b>9</b>
Multiple tasks and processes – Context switching – Scheduling policies – Interprocess communication mechanisms – Exception and interrupt handling - Performance issues.		

**UNIT I****9**

Introduction to software quality - challenges – objectives – quality factors – components of SQA – contract review – development and quality plans – SQA components in project life cycle – SQA defect removal policies – Reviews

**UNIT II****9**

Basics of software testing – test generation from requirements – finite state models – combinatorial designs - test selection, minimization and prioritization for regression testing – test adequacy, assessment and enhancement

**UNIT III****9**

Testing strategies – white box and black box approach – integration testing – system and acceptance testing – performance testing – regression testing - internationalization testing – ad-hoc testing – website testing – usability testing – accessibility testing  
Test plan – management – execution and reporting – software test automation – automated testing tools

**UNIT IV****9**

Hierarchical models of software quality – software quality metrics –function points -Software product quality – software maintenance quality – effect of case tools – software quality infrastructure – procedures – certifications – configuration management – documentation control.

**UNIT V****9**

Project progress control – costs – quality management standards – project process standards – management and its role in SQA – SQA unit

**TOTAL : 45 PERIODS****REFERENCES:**

**UNIT I AD-HOC MAC****9**

Introduction – Issues in Ad-Hoc Wireless Networks. MAC Protocols – Issues, Classifications of MAC protocols, Multi channel MAC & Power control MAC protocol.

<b>UNIT II</b>	<b>AD-HOC NETWORK ROUTING &amp; TCP</b>	<b>9</b>
Issues – Classifications of routing protocols – Hierarchical and Power aware. Multicast routing – Classifications, Tree based, Mesh based. Ad Hoc Transport Layer Issues. TCP Over Ad Hoc – Feedback based, TCP with explicit link, TCP-BuS, Ad Hoc TCP, and Split TCP.		
<b>UNIT III</b>	<b>WSN -MAC</b>	<b>9</b>
Introduction – Sensor Network Architecture, Data dissemination, Gathering. MAC Protocols – self-organizing, Hybrid TDMA/FDMA and CSMA based MAC.		
<b>UNIT IV</b>	<b>WSN ROUTING, LOCALIZATION &amp; QOS</b>	<b>9</b>
Issues in WSN routing – OLSR, AODV. Localization – Indoor and Sensor Network Localization. QoS in WSN.		
<b>UNIT V</b>	<b>MESH NETWORKS</b>	<b>9</b>
Necessity for Mesh Networks – MAC enhancements – IEEE 802.11s Architecture – Opportunistic routing – Self configuration and Auto configuration – Capacity Models – Fairness – Heterogeneous Mesh Networks – Vehicular Mesh Networks.

<b>CS9264</b>	<b>DATA WAREHOUSING AND DATA MINING</b>	<b>LT P C</b>
---------------	---	---------------

**3 0 0 3**

<b>UNIT I</b>		<b>9</b>
---------------	--	----------

Data Warehousing and Business Analysis: - Data warehousing Components –Building a Data warehouse – Mapping the Data Warehouse to a Multiprocessor Architecture – DBMS Schemas for Decision Support – Data Extraction, Cleanup, and Transformation Tools –Metadata – reporting – Query tools and Applications – Online Analytical Processing (OLAP) – OLAP and Multidimensional Data Analysis.

<b>UNIT II</b>		<b>9</b>
----------------	--	----------

Data Mining: - Data Mining Functionalities – Data Preprocessing – Data Cleaning – Data Integration and Transformation – Data Reduction – Data Discretization and Concept Hierarchy Generation.

Association Rule Mining: - Efficient and Scalable Frequent Item set Mining Methods – Mining Various Kinds of Association Rules – Association Mining to Correlation Analysis – Constraint-Based Association Mining.

<b>UNIT III</b>		<b>9</b>
-----------------	--	----------

Classification and Prediction: - Issues Regarding Classification and Prediction – Classification by Decision Tree Introduction – Bayesian Classification – Rule Based Classification – Classification by Back propagation – Support Vector Machines – Associative Classification – Lazy Learners – Other Classification Methods – Prediction – Accuracy and Error Measures – Evaluating the Accuracy of a Classifier or Predictor – Ensemble Methods – Model Section.

**UNIT IV** **9**  
 Cluster Analysis: - Types of Data in Cluster Analysis – A Categorization of Major Clustering Methods – Partitioning Methods – Hierarchical methods – Density-Based Methods – Grid-Based Methods – Model-Based Clustering Methods – Clustering High-Dimensional Data – Constraint-Based Cluster Analysis – Outlier Analysis.

**UNIT V** **9**  
 Mining Object, Spatial, Multimedia, Text and Web Data:  
 Multidimensional Analysis and Descriptive Mining of Complex Data Objects – Spatial Data Mining – Multimedia Data Mining – Text Mining – Mining the World Wide Web.

**TOTAL : 45 PERIODS**

<b>CS9265</b>	<b>PERFORMANCE EVALUATION OF COMPUTER SYSTEMS AND NETWORKS</b>	<b>L T P C 3 0 0 3</b>
---------------	--	----------------------------

**UNIT I** **9**  
 Performance Characteristics – Requirement Analysis: Concepts –User, Device, Network Requirements – Process –Developing RMA ,Delay, Capacity Requirements – Flow Analysis – Identifying and Developing Flows –Flow Models –Flow Prioritization –Specification.

**UNIT II** **9**  
 Random variables - Stochastic process –Link Delay components – Queuing Models – Little’s Theorem – Birth & Death process – Queuing Disciplines.

**UNIT III** **9**  
 Markovian FIFO Queuing Systems – M/M/1 – M/M/a – M/M/∞ - M/G/1 – M/M/m/m and other Markov-Non-Markovian and self-similar models – Network of Queues –Burke’s Theorem – Jackson’s Theorem.

**UNIT IV** **9**  
 Multi-User Uplinks/Downlinks - Capacity Regions - Opportunistic Scheduling for Stability and Max Throughput - Multi-Hop Routing - Mobile Networks - Throughput Optimality and Backpressure

**UNIT V** **9**  
 Performance of Optimal Lyapunov Networking - Energy Optimality- Energy-Delay Tradeoffs - Virtual Cost Queues - Average Power Constraints - Flow Control with Infinite Demand - Auxiliary Variables - Flow Control with Finite Demand - General Utility Optimization.

**CS9266****AGENT BASED INTELLIGENT SYSTEMS****L T P C  
3 0 0 3****UNIT I INTRODUCTION****9**

Definitions - Foundations - History - Intelligent Agents-Problem Solving-Searching - Heuristics - Constraint Satisfaction Problems - Game playing.

**UNIT II KNOWLEDGE REPRESENTATION AND REASONING****9**

Logical Agents-First order logic-First Order Inference-Unification-Chaining- Resolution Strategies-Knowledge Representation-Objects-Actions-Events

**UNIT III PLANNING AGENTS****9**

Planning Problem-State Space Search-Partial Order Planning-Graphs-Nondeterministic Domains-Conditional Planning-Continuous Planning-MultiAgent Planning.

**UNIT IV AGENTS AND UNCERTAINTY****9**

Acting under uncertainty – Probability Notation-Bayes Rule and use - Bayesian Networks-Other Approaches-Time and Uncertainty-Temporal Models- Utility Theory - Decision Network – Complex Decisions.

**UNIT V HIGHER LEVEL AGENTS****9**

Knowledge in Learning-Relevance Information-Statistical Learning Methods-Reinforcement Learning-Communication-Formal Grammar-Augmented Grammars- Future of AI.

**TOTAL : 45 PERIODS****TEXT BOOK:**

**CS9267**

**VISUALIZATION TECHNIQUES**

**LT P C  
3 0 0 3**

**UNIT I VISUALIZATION**

**9**

Introduction – Issues – Data Representation – Data Presentation - Interaction

**UNIT II FOUNDATIONS FOR DATA VISUALIZATION**

**9**

Visualization stages – Experimental Semiotics based on Perception Gibson’s Affordance theory – A Model of Perceptual Processing – Types of Data.

**UNIT III COMPUTER VISUALIZATION**

**9**

Non-Computer Visualization – Computer Visualization: Exploring Complex Information Spaces – Fisheye Views – Applications – Comprehensible Fisheye views – Fisheye views for 3D data – Non Linear Magnification – Comparing Visualization of Information Spaces – Abstraction in computer Graphics – Abstraction in user interfaces.

**UNIT IV MULTIDIMENSIONAL VISUALIZATION**

**9**

One Dimension – Two Dimensions – Three Dimensions – Multiple Dimensions – Trees – Web Works – Data Mapping: Document Visualization – Workspaces.

**UNIT V CASE STUDIES**

**9**

Small interactive calendars – Selecting one from many – Web browsing through a key hole – Communication analysis – Archival analysis

**TOTAL : 45 PERIODS**

**TEXT BOOKS:**

1. Colin Ware, “Information Visualization Perception for Design” Morgan Kaufmann Publishers, 2004, 2<sup>nd</sup> edition.
2. Robert Spence “Information visualization – Design for interaction”, Pearson Education, 2<sup>nd</sup> Edition, 2007

**ADVANCED DATABASES**

**LT P C  
3 0 0 3**

**UNIT I PARALLEL AND DISTRIBUTED DATABASES**

**9**

Database System Architectures: Centralized and Client-Server Architectures – Server System Architectures – Parallel Systems- Distributed Systems – Parallel Databases: I/O Parallelism – Inter and Intra Query Parallelism – Inter and Intra operation Parallelism – Distributed Database Concepts - Distributed Data Storage – Distributed Transactions – Commit Protocols – Concurrency Control – Distributed Query Processing – Three Tier Client Server Architecture- Case Studies.

<b>UNIT II</b>	<b>OBJECT AND OBJECT RELATIONAL DATABASES</b>	<b>9</b>
Concepts for Object Databases: Object Identity – Object structure – Type Constructors – Encapsulation of Operations – Methods – Persistence – Type and Class Hierarchies – Inheritance – Complex Objects – Object Database Standards, Languages and Design: ODMG Model – ODL – OQL – Object Relational and Extended – Relational Systems : Object Relational feature sin SQL/Oracle – Case Studies.		
<b>UNIT III</b>	<b>XML DATABASES</b>	<b>9</b>
XML Databases: XML Data Model – DTD - XML Schema - XML Querying – Web Databases – JDBC – Information Retrieval – Data Warehousing – Data Mining		
<b>UNIT IV</b>	<b>MOBILE DATABASES</b>	<b>9</b>
Mobile Databases: Location and Handoff Management - Effect of Mobility on Data Management - Location Dependent Data Distribution - Mobile Transaction Models - Concurrency Control - Transaction Commit Protocols- Mobile Database Recovery Schemes		
<b>UNIT V</b>	<b>MULTIMEDIA DATABASES</b>	<b>9</b>
Multidimensional Data Structures – Image Databases – Text/Document Databases- Video Databases – Audio Databases – Multimedia Database Design.

**CS9270 COMPONENT BASED TECHNOLOGY LT P C  
3 0 0 3**

**UNIT I INTRODUCTION 9**  
Software Components – objects – fundamental properties of Component technology – modules – interfaces – callbacks – directory services – component architecture – components and middleware.

**UNIT II JAVA COMPONENT TECHNOLOGIES 9**  
Threads – Java Beans – Events and connections – properties – introspection – JAR files – reflection – object serialization – Enterprise Java Beans – Distributed Object models – RMI and RMI-IIOP.

**UNIT III CORBA TECHNOLOGIES 9**  
Java and CORBA – Interface Definition language – Object Request Broker – system object model – portable object adapter – CORBA services – CORBA component model – containers – application server – model driven architecture.

**UNIT IV COM AND .NET TECHNOLOGIES 9**  
COM – Distributed COM – object reuse – interfaces and versioning – dispatch interfaces – connectable objects – OLE containers and servers – Active X controls – .NET components - assemblies – appdomains – contexts – reflection – remoting.

**UNIT V COMPONENT FRAMEWORKS AND DEVELOPMENT 9**  
Connectors – contexts – EJB containers – CLR contexts and channels – Black Box component framework – directory objects – cross-development environment – component-oriented programming – Component design and implementation tools – testing tools - assembly tools.

**TOTAL : 45 PERIODS**
