# **IIT – JEE (2012) PAPER II QUESTION & SOLUTIONS (CODE 1)**

#### Time : 3 Hours INSTRUCTIONS :

#### Maximum Marks: 198

## **INSTRUCTIONS:**

#### A. General

- 1. This booklet is your Question Paper. Do not break the seals of this booklet before being instructed to do so by the invigilators.
- 2. The question paper CODE is printed on the right hand top corner of this page and on the back page (Page No. 36) of this booklet.
- 3. Blank spaces and blank pages are provided in this booklet for your rough work. No additional sheets will be provided for rough work.
- 4. Blank papers, clipboards, log tables, slide rules, calculators, cameras, cellular phones, pagers, and electronic gadgets are NOT allowed inside the examination hall.
- 5. Answers to the questions and personal details are to be filled on a two-part carbon-less paper, which is provided separately. You should not separate these parts. The invigilator will separate them at the end of the examination. The upper sheet is a machine-gradable Objective Response Sheet (ORS) which will be taken back by the invigilator. You will be allowed to take away the bottom sheet at the end of the examination.
- 6. Using a black ball point pen, darken the bubbles on the upper original sheet. Apply sufficient pressure so that the impression is created on the bottom sheet.
- 7. DO NOT TAMPER WITH/MUTILATE THE ORS OR THE BOOKLET.
- 8. On breaking the seals of the booklet check that it contains 36 pages and all the 60 questions and corresponding answer choices are legible. Read carefully the instructions printed at the beginning of each section.

#### **B.** Filling the Right Part of the ORS

- 9. The ORS has CODES printed on its left and right parts.
- 10. Check that the same CODE is printed on the ORS and on this booklet. **IF IT IS NOT THEN ASK FOR A CHANGE OF THE BOOKLET**. Sign at the place provided on the ORS affirming that you have verified that all the codes are same.
- 11. Write your Name, Registration Number and the name of examination centre and sign with pen in the boxes provided on the right part of the ORS. **Do not write any of this information anywhere else**. Darken the appropriate bubble **UNDER** each digit of your Registration Number in such a way that the impression is created on the bottom sheet. Also darken the paper CODE given on the right side of ORS (R4).

#### C. Question Paper Format

The question paper consists of 3 parts (Physics, Chemistry and Mathematics). Each part consists of three sections.

- 12. Section I contains 8 multiple choice questions. Each question has four choices (A), (B), (C) and (D) out of which ONLY ONE is correct.
- 13. Section II contains **3 paragraphs** each describing theory, experiment, data etc. There are 6 multiple choice questions relating to three paragraphs with **2 questions on each paragraph**. Each question of particular paragraph has four choices (A), (B), (C) and (D) out of which **ONLY ONE is correct**.
- 14. Section III contains 6 multiple choice questions. Each question has four choices (A), (B), (C) and (D) out of which ONE or MORE are correct.

#### **D.** Marking Scheme

- 15. For each question in Section I and Section II, you will be awarded 3 marks if you darken the bubble corresponding to the correct answer ONLY and zero (0) marks if no bubbles are darkened. In all other cases, minus one (-1) mark will be awarded in these sections.
- 16. For each question in **Section III**, you will be awarded **4 marks** if you darken **ALL** the bubble(s) corresponding to the correct answer(s) **ONLY**. In all other cases **zero (0) marks** will be awarded. **No negative marks** will be awarded for incorrect answer(s) in this section.

Name of the Candidate	Registration Number
I have read all the instructions and shall abide by them.	I have verified all the instructions filled in by the Candidate.
Signature of the Candidate	Signature of the Invigilator

#### Part I : Physics Section I : Single Correct Answer Type

This section contains 8 multiple choice questions. Each question has 4 choices (A), (B), (C) and (D), out of which ONLY ONE is correct.

1. A loop carrying current l lies in the x-y plane as shown in the figure. The unit vector  $\mathbf{k}$  is coming out of the plane of the paper. The magnetic moment of the current loop is

- $= \Pi \left( 4\pi \left(\frac{a}{2}\right)^2 + a^2 \right) \hat{k}$  $= \left(\frac{\pi}{2} + 1\right) a^2 \, I \, \hat{k}$
- 2. An infinitely long hollow conducting cylinder with inner radius  $\frac{R}{2}$  and outer radius R carries a uniform current density along its length. The magnitude of the magnetic field, |B| as a function of the radial distance r from the axis is best represented by

Ans. (D)

Sol. Magnetic field at a point P (at a distance 'r' from the axis) will be,

- A thin uniform cylindrical shell, closed at both ends; is partially filled with Water. It is floating vertically in 3. water in half-submerged state. If v is the relative density of the material of the shell with respect to water, then the correct statement is that the shell is
  - (A) more than half-filled if  $\rho_c$  is less than 0.5.
  - (B) more than half-filled if  $\rho_c$  is more than 1.0
  - (C) half-filled if  $\rho_c$  is more than 0.5

Solution

$$mg + \pi r^2 h \rho_w g = \pi r^2 \frac{l}{2} \rho_w g$$

$$h = \frac{\pi r^2 \frac{l}{2} \rho_w g - mg}{\pi r^2 \rho_w g}$$

$$h = \frac{l}{2} - \frac{m}{\pi r^2 \rho_w}$$

In given circuit, a charge of  $+80\mu$ C is given to the upper plate of the  $4\mu$ F capacitor. Then in the steady 4. state, the charge on the upper plate of the  $3\mu F$  capacitor is

assumed to require no energy in its expansion. The temperature of the gas in the balloon is slowly changed to  $35^{\circ}$ C. The amount of heat required in raising the temperature is nearly (take R = 8.31 J/mol.K)

Sol. For an isobaric process,

$$Q = nC_{P}\Delta T$$
$$= 2\left(\frac{5}{2}R\right)(5) \qquad = 2 \times \frac{5}{2} \times 8.31 \times 5 = 208 \text{ J}$$

- 6. Consider a disc rotating in the horizontal plane with a constant angular speed  $\omega$  about its centre O. The disc has a shaded region on one side of the diameter and an unshaded region on the other side as shown in the figure. When the disc is in the orientation as shown, two pebbles P and Q are simultaneously projected at an angle towards R. The velocity of projection is in the y-z plane and is same for both pebbles with respect to the disc. Assume that (i) they land back on the disc before the disc has completed  $\frac{1}{8}$  rotation, (ii) their range is less than half the disc radius, and (iii)  $\omega$  remains constant throughout. Then R ω (A) P lands in the shaded region and Q in the unshaded region (B) P lands in the unshaded region and Q in the shaded region (C) Both P and O land in the unshaded region (D) Both P and Q land in the shaded region Ans. (A) Since time of flight is less than  $\frac{\pi}{4\omega}$  and range  $<\frac{R}{2}$ . Sol. Therefore  $\rho$  lands in shaded region while Q in unshaded region. 7. A student is performing the experiment of Resonance Column. The diameter of the column tube is 4 cm. The frequency of the tuning fork is 512 Hz. The air temperature is 38°C in which the speed of sound is 336 m/s. The zero of the meter scale coincides with the top end of the Resonance Column tube. When the first resonance occurs, the reading of the water level in the column is (A) 14.0 cm (B) 15.2 cm (C) 16.4 cm (D) 17.6 cm Ans. **(B)** e = 0.3DNARAYANA GROUP Sol.  $\ell + e = \frac{\lambda}{4}$  $\lambda = 4(\ell + e)$  $\therefore v = f\lambda$  $v = f4(\ell + e)$ Putting the values  $336 = 512 \times 4 \times \left(\ell + 0.3 \times 4 \times 10^{-2}\right)$  $[\ell = 15.2 \, \text{cm}]$
- 8. Two identical discs of same radius R are rotating about their axes in opposite directions with the same constant angular speed  $\omega$ . The discs are in the same horizontal plane. At time t = 0, the points P and Q are facing each other as shown in the figure. The relative speed between the two points P and Q is v<sub>r</sub> as a function of time is best represented by

This section contains 6 multiple choice questions relating to three paragraphs with two questions one each paragraph. Each question has 4 choices (A), (B), (C) and (D), out of which ONLY ONE is correct.

#### Paragraph for Questions 9 and 10

Most materials have the refractive index, n > 1. So, when a light ray from air enters a naturally occurring material, then by Snell's law,  $\frac{\sin \theta_1}{\sin \theta_2} = \frac{n_1}{n_2}$ , it is understood that the refracted ray bends towards the normal. But it never emerges on the same side of the normal as the incident ray. According to electromagnetism, the refractive index of the medium is given by the relation,  $n = \left(\frac{c}{v}\right) = \pm \sqrt{\epsilon_r \mu_r}$ , where c is the speed of the electromagnetic waves in vacuum, v its speed in the medium,  $\varepsilon_r$  and  $\mu_r$  are negative, one must choose the negative root of n. Such negative refractive index materials can now be artificially prepared and are called meta-materials. They exhibit significantly different optical behavior, without violating any physical laws. Since n is negative, it results in a change in the

direction of propagation of the refracted light. However, similar to normal materials, the frequency of light remains unchanged upon refraction even in meta-materials.

9. For light incident from air on a meta-material, the appropriate ray diagrams

Physical characteristic remains unchanged. Sol.

Paragraph for Questions 11 and 12

The  $\beta$ -decay process, discovered around 1900, is basically the decay of a neutron (n). In the laboratory, a proton (p) and an electron (e) are observed as the decay products of the neutron. Therefore, considering the decay of a neutron as a two-body decay process, it was predicted theoretically that the kinetic energy of the electron should be a constant. But experimentally, it was observed that the electron kinetic energy has a continuous spectrum. Considering a three-body decay process, ie.,  $n \rightarrow p + e^- + \overline{v}_e$ , around 1930, Pauli explained the observed electron energy spectrum. Assuming the anti-neutrino  $(\overline{v}_e)$  to be massless and possessing negligible energy, and the neutron to be at rest, momentum and energy conservation principles are applied. From this calculation, the maximum kinetic energy of the electron is  $0.8 \times 10^6 \text{ eV}$ . The kinetic energy carried by the proton is only the recoil energy.

What is the maximum energy of the anti-neutrino 11.

> (B) Much less than  $0.8 \times 10^6 \text{ eV}$ (A) Zero

(C) Nearly  $0.8 \times 10^6 \text{ eV}$ (D) Much larger than  $0.8 \times 10^6 \text{ eV}$ 

10.

Ans. (C)

- Sol. Anti-neutrino will have maximum energy when electron will have minimum or nearly zero energy.
- 12. If the anti-neutrino had a mass of  $3 \text{ eV/e}^2$  (where e is the speed of light) instead of zero mass, what should be the range of the kinetic energy, K, of the electron

(A) 
$$0 \le K \le 0.8 \times 10^6 \text{ eV}$$
 (B)  $3.0 \text{ eV} \le K \le 0.8 \times 10^6 \text{ eV}$ 

(C) 
$$3.0 \text{ eV} \le \text{K} \le 0.8 \times 10^6 \text{ eV}$$
 (D)  $0 \le \text{K} < 0.8 \times 10^6 \text{ eV}$ 

```
Ans. (D)
```

Sol. K can't be equal to  $0.8 \times 10^6$  eV as anti-neutrino must have some energy.

#### Paragraph for Questions 13 and 14

The general motion of a rigid body can be considered to be a combination of (i) a motion of its centre of mass about an axis, and (ii) its motion about an instantaneous axis passing through the centre of mass. These axes need not be stationary. Consider, for example, a thin uniform disc welded (rigidly fixed) horizontally at its rim to a massless stick, as shown in the figure. When the disc-stick system is rotated about the origin on a horizontal frictionless plane with angular speed  $\omega$ , the motion at any instant can be taken as a combination of (i) a rotation of the centre of mass of the disc about the z-axis, and (ii) a rotation of the disc through an instantaneous vertical axis passing through its centre of mass (as is seen from the changed orientation of points P and Q). Both these motions have the same angular speed  $\omega$  in this case.

Now consider two similar systems as shown in the figure: Case (a) the disc with its face vertical and parallel to x-z plane; Case (b) the disc with its face making an angle of  $45^{\circ}$  with x-y plane and its horizontal diameter parallel to x-axis. In both the cases, the disc is welded at point P, and the systems are rotated with constant angular speed  $\omega$  about the z-axis.

- 13. Which of the following statements about the instantaneous axis (passing through the centre of mass) is correct
  - (A) It is vertical for both the cases (a) and (b)
  - (B) It is vertical for case (a); and is at  $45^{\circ}$  to the x-z plane and lies in the plane of the disc for case (b)
  - (C) It is horizontal force case (a); and is at 45° to the x-z plane and is normal to the plane of disc for case (b)

(D) It is vertical for case (a); and is at  $45^{\circ}$  to the x-z plane and is normal to the plane of the disc for case (b) Ans. (A)

- Sol. Axis of rotation is parallel to z-axis.
- 14. Which of the following statements regarding the angular speed about the instantaneous axis (passing through the centre of mass) is correct

(A) It is  $\sqrt{2\omega}$  for both the cases

(B) It is  $\omega$  for case (a); and  $\frac{\omega}{\sqrt{2}}$  for case (b)

- (C) It is  $\omega$  for case (a); and  $\sqrt{2\omega}$  for case (b)
- (D) It is  $\omega$  for both the cases
- Ans. (D)
- Sol. Since body is rigid so  $\omega$  for every part is same.

## Section III : Multiple Correct Answer(s) Type

This section contains 6 multiple choice questions. Each question has four choices (A), (B), (C) and (D), out of which ONE or MORE are correct.

15. In the given circuit, the AC source has  $\omega = 100 \text{ rad / s}$ . Considering the inductor and capacitor to be ideal, the correct choice (s) is (are)

16. A current carrying infinitely long wire is kept along the diameter of circular wire loop, without touching it. The correct statement (s) is (are)

- (A) The emf induced in the loop is zero if the current is constant
- (B) The emf induced in the loop is finite if the current is constant
- (C) The emf induced in the loop is zero if the current decreases at a steady rate
- (D) The emf induced in the loop is finite if the current decreases at a steady rate
- **Sol.** (A, C)

Net flux through the loop is always zero.

 $\Rightarrow$   $r_{Q} = 2x$ Now for planet R

$$\rho \frac{4}{3}\pi x^{3} + \rho \frac{4}{3}\pi (2x)^{3} = \rho \times \frac{4}{3}\pi (r_{R})^{3}$$

$$\Rightarrow \qquad r_{R} = 9^{1/3} \times x$$

$$v_{e} = \sqrt{\frac{2GM}{r}} = \sqrt{\frac{2G\frac{4}{3}\pi r^{3}\rho}{r}}$$

Hence  $v_e \propto r$ 

20. The figure shows a system consisting of (i) a ring of outer radius 3R rolling clockwise without slipping on a horizontal surface with angular speed  $\omega$  and (ii) an inner disc of radius 2R rotating anti-clockwise with angular speed  $\omega/2$ . The ring and disc are separated by frictionless ball bearing. The system is in the x-z plane. The point P on the inner disc is at a distance R from the origin, where OP makes an angle 30° with the horizontal. Then with respect to the horizontal surface

## Section III : Multiple Correct Answer(s) Type

This section contains 6 multiple choice questions. Each question has four choices (A), (B), (C) and (D), out of which ONE or MORE are correct.

35. The reversible expansion of an ideal gas under adiabatic and isothermal conditions is shown in the figure. Which of the following statement(s) is (are) correct ?

- (C) In w<sub>isothermal</sub>,  $\Delta U = 0$  so energy gets converted in to work done where as for in the adiabatic process Q = 0. w<sub>isothermal</sub> > w<sub>adiabatic</sub> (D)  $\Delta U_{isothermal} = 0$ ,  $\Delta U_{adiabatic} = -ve$  so  $\Delta U_{isothermal} > \Delta U_{adiabatic}$
- 36. The given graphs /data I, II, III and IV represent general trends observed for different physisorption and chemisorptions process under mild conditions of temperature and pressure. Which of the following choice(s) about I, II, III and IV is (are) correct ?

- (A) I is physisorption and II is chemisorptions
- (B) I is physisorption and III is chemisorption
- (C) IV is chemisorptions and II is chemisorption
- (D) IV is chemisorption and III is chemisorptions

Ans. (AC)

Sol. It is characteristic of physisorption and chemisorption.

37. For the given aqueous reactions, which of the statement(s) is (are) true ?

 $excess KI + K_3[Fe(CN)_6] \xrightarrow{dilute H_2SO_4} brownish - yellow solution$ 

 $\downarrow$ ZnSO

white precipitate + brownish - yellow filtrate

 $\downarrow_{Na[S]O}$ colourless solution

(A) The first reaction is redox reaction

(B) White precipitate is  $Zn_3[Fe(CN)_6]_2$ .

(C) Addition of filtrate to starch solution gives blue colour.

(D) White precipitate is soluble in NaOH solution.

Ans.

(ACD)

Sol.

 $excess KI + K_{3}[Fe(CN)_{6}] \xrightarrow{dilute H_{2}SO_{4}} KI_{3} + K_{4}[Fe(CN)_{6}] \downarrow ZnSO_{4}$   $K_{2}Zn_{3}[Fe(CN)_{6}]_{2} + I_{2}$ White ppt.  $Va_{4}S_{4}O_{4}$ 

 $Na_2S_4O_6 + NaI$ Colourless solution

- (A) It is redox reaction
- (B) White precipitate is  $K_2Zn_3[Fe(CN)_6]_2$ .

(C) Blue colour obtained due to starch  $-I_2$  complex

(D) White precipitate is soluble in NaOH.

 $K_{2}Zn_{3}\left[Fe(CN)_{6}\right]_{2}+12\bar{O}H \rightarrow 2\left[Fe(CN)_{6}\right]^{4-}+3\left[Zn(OH)_{4}\right]^{2-}+2K^{4}$ 

38. With respect to graphite and diamond, which of the statement(s) given below is (are) correct?

(A) Graphite is harder than diamond.

- (B) Graphite has higher electrical conductivity than diamond.
- (C) Graphite has higher thermal conductivity than diamond.
- (D) Graphite has higher C C bond order than diamond

Ans. (BCD)

- Sol. In Graphite each carbon is  $sp^2$  hybridized with one delocalized electron. So it conducts heat and electricity.
- 39. With reference to the scheme given, which of the given statement(s) about T, U, V and W is (are) correct ?

$$V \xrightarrow{CrO_3/H^+} U \xrightarrow{O} U \xrightarrow{O} U$$

(A)T is soluble in hot aqueous NaOH

(B) U is optically active

- (C) Molecular formula of W is  $C_{10}H_{18}O_4$
- (D) V gives effervescence on treatment with aqueous NaHCO<sub>3</sub>.

(A) M, N are not mirror image for each other but they satisfy the condition of stereoisomer.

- (B) After 180<sup>°</sup> rotation 'O' structure is similar to 'M' thus they are identical.
  (C) After 180<sup>°</sup> rotation 'P' structure will be non supper impossible mirror image (enantiomer) of 'M'.

## Part III : Mathematics Section I : Single Correct Answer Type

This section contains 8 multiple choice questions. Each question has 4 choices (A), (B), (C) and (D), out of which ONLY ONE is correct.

The equation of a plane passing through the line of intersection of the planes x + 2y + 3z = 2 and x - y + z = 241. 3 and at a distance  $\frac{2}{\sqrt{2}}$  from the point (3, 1, -1) is

(A) 
$$5x - 11y + z = 17$$
  
(B)  $\sqrt{2}x + y = 3\sqrt{2} - 1$   
(C)  $x + y + z = \sqrt{3}$   
(B)  $\sqrt{2}x + y = 3\sqrt{2} - 1$   
(D)  $x - \sqrt{2}y = 1 - \sqrt{2}$   
Key - (A)

Sol.  $(\mathbf{A})$ 

> Equation of the plane passing through line of intersection of x + 2y + 3z - 2 = 0 and x - y + z -3 = 0 is THE NARAYANA CR

$$(x + 2y + 3z - 2) + \lambda (x - y + z - 3) = 0$$
  
x(1 + \lambda) + y(2 - \lambda) + z(3 + \lambda) + (-2 - 3\lambda) = 0 ...(i)

(i) is at a distance of  $\frac{2}{\sqrt{3}}$  from (3, 1, -1)

$$\Rightarrow \left| \frac{3(1+\lambda) + (2-\lambda) - (3+\lambda) - 2 - 3\lambda}{\sqrt{(1+\lambda)^2 + (2-\lambda)^2 + (3+\lambda)^2}} \right| = \frac{2}{\sqrt{3}}$$
  
$$\Rightarrow \left| \frac{3+3\lambda+2-\lambda-3-\lambda-2-3\lambda}{\sqrt{3\lambda^2 + 4\lambda + 14}} \right| = \frac{2}{\sqrt{3}} \Rightarrow \left| \frac{\lambda}{\sqrt{3\lambda^2 + 4\lambda + 14}} \right| = \frac{1}{\sqrt{3}}$$
  
$$3\lambda^2 = 3\lambda^2 + 4\lambda + 14$$
  
$$\lambda = -\frac{7}{2}$$

Equation of plane becomes

$$x + 2y + 3z - 2 - \frac{7}{2}(x - y + z - 3) = 0$$
  
⇒ 2x + 4y + 6z - 4 - 7x + 7y - 7z + 21 = 0

 $\Rightarrow -5x + 11y - z + 17 = 0$  $\Rightarrow 5x - 11y + z = 17$ 

42. Let PQR be a triangle of area  $\Delta$  with a = 2,  $b = \frac{7}{2}$  and  $c = \frac{5}{2}$ , where a, b and c are the lengths of the sides

of the triangle opposite to the angles at P, Q and R respectively. Then  $\frac{2\sin P - \sin 2P}{2\sin P + \sin 2P}$  equals

(A) 
$$\frac{3}{4\Delta}$$
 (B)  $\frac{45}{4\Delta}$  (C)  $\left(\frac{3}{4\Delta}\right)^2$  (D)  $\left(\frac{45}{4\Delta}\right)^2$

This section contains 6 multiple choice questions relating to three paragraphs with two questions one each paragraph. Each question has 4 choices (A), (B), (C) and (D), out of which ONLY ONE is correct.

## Paragraph for Questions 49 and 50

Let  $a_n$  denote the number of all n-digit positive integers formed by the digits 0, 1 or both such that no consecutive digits in them are 0. Let  $b_n$  = the number of such n-digit integers ending with digit 1 and  $c_n$  the number of such n-digit integers ending with digit 0. THE NARRAY ANA GROUP

49. The value of 
$$b_6$$
 is  
(A) 7 (B) 8 (C) 9 (D) 11  
Sol. Key – (B)  
If number of 0 in  $b_6$  is 0, then we have only one such number.  
If number of 0 in  $b_6$  is 1, then we have 4 such numbers.  
If number of 0 in  $b_6$  is 2, then we have 3 such numbers.  
So,  $b_6 = 8$   
50. Which of the following is correct?  
(A)  $a_{17} = a_{16} + a_{15}$  (B)  $c_{17} \neq c_{16} + c_{15}$  (C)  $b_{17} \neq b_{16} + c_{16}$  (D)  $a_{17} = c_{17} + b_{16}$   
Sol. Key – (A)  
In such a number either last digit is 1 or 0.  
So,  $a_m = a_{m-1} + a_{m-2}$   
So,  $a_{17} = a_{16} + a_{15}$
