

Reg. No. : .....

Name : .....

**M.Sc. Previous Degree Examination, August 2009**

**(I.D.E.)**

**Branch : MATHEMATICS**

**MM 1101 – Linear Algebra**

**(Prior to 2006 admission)**

Time : 3 Hours

Max. Marks : 85

*Instructions: Answer either A or B of each question.*

I. A) a) Let  $A = \begin{bmatrix} -1 & i \\ -i & 3 \\ 1 & 2 \end{bmatrix}$ . Prove that the system  $AX = 0$  has only the trivial solution.

5

b) Suppose  $A, B, C$  are matrices such that the products  $BC, A(BC), AB$  and  $(AB)C$  are defined. Prove that  $A(BC) = (AB)C$ .

6

c) Discover whether  $A = \begin{bmatrix} 1 & 2 & 3 & 4 \\ 0 & 2 & 3 & 4 \\ 0 & 0 & 3 & 4 \\ 0 & 0 & 0 & 4 \end{bmatrix}$  is invertible. If invertible find  $A^{-1}$ .

6

B) a) Prove that the set of all numbers of the form  $x + y\sqrt{2}$ , where  $x$  and  $y$  are rationals is a subfield of the field of complex numbers.

5

b) Define row equivalence of matrices. Suppose  $A$  and  $B$  are row equivalent  $m \times n$  matrices over a field  $F$ . Prove that the homogeneous system of linear equations  $AX = 0$  and  $BX = 0$  have exactly the same solutions.

6

c) Define row reduced echelon matrices. Give an example. Prove that every  $m \times n$  matrix is row-equivalent to a row reduced echelon matrix.

6

P.T.O.

- II. A) a) Prove that the only subspaces of  $\mathbb{R}$  are  $\mathbb{R}$  and the zero space. **4**
- b) Suppose  $P$  is an  $n \times n$  invertible matrix over  $F$ . Let  $V$  be an  $n$ -dimensional vector space over  $F$  with an ordered basis  $B$ . Prove that there is a unique ordered  $B'$  of  $V$  such that  $[\alpha]_B = P[\alpha]_{B'}$  and  $[\alpha]_{B'} = P^{-1}[\alpha]_B$  for every vector  $\alpha$  in  $V$ . **7**
- c) In  $\mathbb{C}^3$  Let  $\alpha_1 = (1, 0, -i)$ ,  $\alpha_2 = (1+i, 1-i, 1)$  and  $\alpha_3 = (i, i, i)$ . Prove that  $\{\alpha_1, \alpha_2, \alpha_3\}$  is a basis for  $\mathbb{C}^3$ . What are the coordinates of the vector  $(a, b, c)$  in this basis? **6**
- B) a) Suppose  $V$  is a finite dimensional vector space over a field  $F$ . Prove that every non-empty linearly independent set of vectors in  $V$  can be extended to a basis for  $V$ . **6**
- b) Let  $V$  be an  $n$ -dimensional vector space over a field  $F$  with ordered bases  $B$  and  $B'$ . Prove that there is a unique, invertible by  $n \times n$  matrix  $P$  with entries in  $F$  such that  $[\alpha]_B = P[\alpha]_{B'}$  and  $[\alpha]_{B'} = P^{-1}[\alpha]_B$  for every vector  $\alpha$  in  $V$ . **7**
- c) Let  $W$  be the subspace of  $\mathbb{C}^3$  spanned by  $(1, 0, i)$  and  $(1+i, 1, -1)$ . Prove that the vector  $(1, i, 1+i)$  lie in  $W$ . **4**
- III. A) a) State and prove the rank-nullity theorem. **6**
- b) Let  $T$  be a linear transformation from  $V$  into  $W$ . Prove that  $T$  is non-singular if and only if  $T$  carries each linearly independent subset of  $V$  onto a linearly independent subset of  $W$ . **6**
- c) Suppose  $W_1$  and  $W_2$  are subspaces of a finite dimensional vector space  $V$ . Prove that  $W_1 = W_2$  if and only if  $W_1^0 = W_2^0$ . **5**
- B) a) Define the rank, nullity of a linear transformation consider the mapping  $T : \mathbb{R}^3 \rightarrow \mathbb{R}^3$  defined as  $T(x_1, x_2, x_3) = (x_1 - x_2, 0, x_3)$ . Prove that  $T$  is a linear transformation. Find its rank and nullity. **5**

b) Let  $T : \mathbb{C}^3 \rightarrow \mathbb{C}^3$  be defined as  $Te_1 = (1, 0, i)$ ,  $Te_2 = (0, 1, 0)$ ,  $Te_3 = (i, 1, 0)$  where  $(e_1, e_2, e_3)$  is the standard basis for  $\mathbb{C}^3$ . Check whether  $T$  is invertible. If invertible, compute the inverse. **6**

c) Let  $V$  be a finite dimensional vector space over a field  $F$ . Prove that  $V$  is isomorphic to  $V^*$ . **6**

IV. A) a) Define the characteristic value, the characteristic vector and the characteristic space of a linear operator. **4**

b) Let  $T$  be a linear operator on a finite dimensional vector space  $V$  with  $C_1, \dots, C_k$  as the distinct characteristic values and  $W_1, \dots, W_k$  the corresponding characteristic spaces. Prove the following are equivalent :  
i)  $T$  is diagonalisable  
ii) The characteristic polynomial for  $T$  is  $f = (x - C_1)^{d_1} \dots (x - C_k)^{d_k}$ . With  $\dim W_i = d_i$ ,  $i = 1, \dots, k$ .  
iii)  $\dim W_1 + \dots + \dim W_k = \dim V$ . **7**

c) If  $V = W_1 \oplus W_2 \oplus \dots \oplus W_k$ , prove that there exists  $k$  linear operators  $E_1, \dots, E_k$  on  $V$  such that :  
i) each  $E_i$  is a projection  
ii)  $E_i E_j = 0$ ,  $i \neq j$   
iii)  $I = E_1 + \dots + E_k$   
iv) Range of  $E_i = W_i$ ,  $i = 1, \dots, k$ . **6**

B) a) Define the characteristic value, the characteristic vector, the characteristic space of a linear operator. **4**

b) Let  $T$  be a linear operator on an  $n$ -dimensional vector space  $V$ . Prove that the characteristic and the minimal polynomial for  $T$  have the same roots except for multiplicities. **6**

c) State and prove a characterisation theorem for a linear operator on a finite dimensional space to be diagonalizable, in terms of the characteristic values and the projections. **7**

- V. A) a) Define T-admissible subspaces. State the cyclic decomposition theorem. **5**
- b) Describe when an  $n \times n$  matrix A said to be in (i) rational form (ii) Jordan form. Give examples for each. **6**
- c) If A is a complex  $5 \times 5$  matrix with characteristic polynomial  $(x - 2)^3 (x + 7)^2$  and minimal polynomial  $(x - 2)^2 (x + 7)$ , write down the Jordan form of A. **6**
- B) a) Define the T-annihilator of a vector  $\alpha$  in a vector space. If  $P_\alpha$  is the T-annihilator of  $\alpha$  and degree of  $P_\alpha$  is k, prove that the vectors  $\alpha, T\alpha, \dots, T^{k-1}\alpha$  form a basis for  $z(\alpha; T)$ . **6**
- b) State and prove the Generalized Cayley-Hamilton theorem. **11**
-
